At this time I had much need of ridding my thought of

the testimony of the material senses, and a few afternoons

later I went to the local reading room and talked with the

librarian and was shown how to study our textbook together

with the Bible. Having purchased a Quarterly I returned

home with uplifted thought; a burden had been lifted, and I

began at once to study and to rely absolutely on the teach-

ings of Science and Health as its meaning unfolded to me.

The next Sunday our two children began attending the

Christian Science Sunday school and have gone continually

We have had many healings in our home, but I shall

always remember and rejoice for the first proof of the sim-

plicity of the truth as taught in Christian Science. Our little

girl, then nearly three years of age, was playing by a door,

and on losing her balance she grabbed for the wall. One

hand caught the door knob, while the other hand pressed

against the back of the door, the little finger entering the

opening at the hinges. The weight closed the door, with her

finger caught. Her father, who was standing near, went to

the door and unlatched it, releasing her finger. She cried but

very little, to my surprise, and as I did not then awaken to

the realization that it was an opportunity for me to apply

the truth, the correct thinking was wholly hers. I had no

fear and said not a word. As soon as she was freed, she

turned to where I was sitting and got up on my lap, laying

her hand on my shoulder, and I caught part of what she was

repeating to herself: "Put it behind me." She asked me to

say the Commandments and we sat there repeating them all,

as she knew only the first one without being prompted, and wanted, as she said, to "say more." Then she went off to

play, with never a look at the finger. I know I did not think

That evening when her father came home she ran to

meet him as she always did, and I saw him look at her hand.

She then said, "See, papa, my hand is all right," and truly it

was; there was no discoloration and not even a break in the

skin. This made both of us think, for she had only been

when I was a child, but I had been taught far differently.

attending the Sunday school three Sundays, and I afterwards learned that her teacher had told the class that they must

put error behind them and let Love care for them. we knew why she had whispered, "Put it behind me," and then I knew why she did not look at her hand, and why I had not done so. The purity and trustfulness of the child thought

had relied on the truth, making the experience one of instant healing and protection. This one experience helped me many times afterwards when I felt tempted to become discouraged,

and always brought healing to me. Sometime during that first year of study and the appli-

cation of the little understanding I had, I laid aside glasses,

which I had never been without since I was five years of age, when a febrile disease left me with defective sight of both

eyes, for which specialists could do little, and for a year or more I was dependent on those in our home to feed me and

lead me around. As the obstruction began to leave, from

out of doors. When I reached the age of ten years I was able to change to clear glasses and continued to wear them until I began to study Christian Science, when I would neglect to put them on in the mornings, and on finding I had done so would go back and get them, until I finally forgot them and did not return for them, and some months later when packing to move came across them. During this time I had read, sewed, and had done some fancywork, and as I sat and thought of this I could but marvel that the need for glasses had been wiped out of the thought of even my friends and family, for no one ever asked me where they were or told me I was sewing without them, showing, so beautifully to me, that all fear had been removed. Specialists had sentenced me to total blindness at some future time. They claimed the scars from the fever almost covered both eyes and that the spots that were ever before me were from these scars. They are now entirely removed and I use my eyes continually, realizing in some measure at least what true sight is. The scriptural prophecy, "And a little child shall lead them" was made beautifully true for me, for which I am deeply grateful.

time to time I was able to go out alone, but always wore

a pair of black glasses and a green sunbonnet, both in and

(Mrs.) PEARL THRELKELD, Porterville, Calif.

For the many blessings which I have received through Christian Science I am indeed grateful to God, to Christ Jesus the Way-shower, to Mrs. Eddy, who labored long and faithfully that we might know the truth, and to a loving practitioner who has helped me to realize the nothingness of error.

The first demonstration was made for me a few years ago when I knew but very little of Christian Science. I became very ill with chills and fever and my husband called a doctor, as we had, up to that time, depended upon materia medica for help, not knowing God as All-power. The doctor pronounced the case to be serious, installed a nurse, and asked for a consultation of physicians. The diagnosis was typhoid-malaria and acute appendicitis, the doctors declaring that the appendix had broken and the poison was rapidly passing through the system; they also said there was paralysis of the lower bowels and a fever running extremely high. The doctors insisted that I should be taken to the hospital for an immediate operation; in fact, they held out very little hope. When this was told to me the thought came at once to try Christian Science. A practitioner was called, the doctors dismissed,-much to their wonder and surprise,a Christian Science nurse was engaged, and from the moment the practitioner began treatment I felt a great peace and rest and immediately fell asleep, which I had not been able to do for several days. The next day I sat up, and within

one week was out on the street. Each day brings more knowledge of the truth and a clearer understanding of the wonderful blessings which have come to us through Christian Science. I have had many more demonstrations. The past winter the claim of bronchial pneumonia was met. I feel that words are inadequate to express my gratitude for this great truth, which leads us in the right way and makes us free from sin, sickness, and death. The Christian Science literature is a great help to me. I am greatly benefited by reading the testimonies, and hope that this may help others who are trying also to know and live the truth.

(Mrs.) Ava Robb Sylvester, New York City.

Signs of the Times

["The Act of God"—The Christian Science Monitor, Boston, U.S.A.
Nov. 10, 1920]

The metaphysics of Christianity shows God to be Principle, or the eternal cause of all things, the everlasting Mind that does not permit, has never permitted, and never will permit any other so-called power to take His place, for He is All. Divine Science proves this statement by simple logic which demonstrates that real consciousness, infinite good, or Mind in its unlimited meaning, exists. All things are the reflection of this Mind, but nothing material is included in this expression. The reason that matter is not found in Mind and its expression is the very elemental one that grapes do not grow from fig trees. Principle brings forth its likeness, that which is incorporeal, spiritual, and eternal like itself. Matter, or mortal mind, material man and a material universe, are unreal. Physical scientists, attempting to prove the substance of matter, find it what they call a form of energy, or activity. This is merely a supposed counterfeit of the activity of Mind, which is spiritual and unlimited. Before this fact the belief of matter must finally melt away, for "he uttered his voice, the earth melted."

The material scheme of things, based on this supposititious carnal mind, or so-called material cause, has "sought out many inventions" about God and has proceeded to permeate human society with them, incorporating them in its school books, its prayer books, its law books, and in endless other avenues by which men gain knowledge. Surely from out of the rightly named Dark Ages came one of these "inventions," that legal phrase, now long established in Anglo-Saxon law, "act of God," three words which Sir Edward Coke first defined and used in 1581 as meaning storms, lightning, tempests, and the like. It has in modern times been extended in meaning to include death, illness, flood, and so on. The happening of one of these so-called contingencies, which is legally termed an "act of God," is, in general, allowed as an excuse for not performing an agreement entered into. Various forms of contracts, notably steamship tickets, freight receipts, and some employment agreements contain this phrase which operates as a release of liability.

This attaching to Him who John said was Love those destructible qualities which are inconsistent with everlasting being or Principle, is indefensible. If the eternal knew destruction, He must eventually suffer downfall Himself. But while this nature is attached to God with all the baldness of legal phrasing, it is given to Him with no more blameworthiness in law than in theology, where possibly more polished statements have been made to the same effect. It is true that the three words, while without doubt representing the thought of the century of their origin about God, have now taken a narrow meaning as indicating merely an occurrence of a certain kind which, according to the legal definition, "could not happen by the intervention of man." Yet the phrase stands as a reproach to advanced understanding of law, quite as much as do its brother phrases in other forms stand as blots on some ecclesiastical books. When the time came for Lord Mansfield, that great jurist, to restate the meaning of the phrase a century after it had originated, his definition, as then given, that "everything is the act of God that happens by His permission, everything by His knowledge," metaphysically interpreted, is exactly the standpoint of Christian Science.

Mind, or God, does not send death, sickness, and earthquakes, for He knows them not. He therefore does not permit them. His perfect allness destroys all belief in them,

and since He has ever been All-in-all, such evil happenings, however real they may seem to men, have never truly occurred. Eternal Mind created man "in his own image," and this creation of Spirit is forever preserved inviolate. The material so-called man is the entirely untrue imitation of the real image of God. The proof of this is found in the presence of Principle as demonstrated in Christian Science, and in the fruits proceeding from it-the healing of disease, disaster, and trouble of all kinds; for when an admittedly so-called permanent physical condition, or disease, vanishes instantaneously, it is obvious that Spirit is all and matter is naught. On page 4 of "Unity of Good," Mary Baker Eddy, Discoverer and Founder of Christian Science, says: "But how could we lose all consciousness of error, if God be conscious of it? God has not forbidden man to know Him; on the contrary, the Father bids man have the same Mind 'which was also in Christ Jesus,'-which was certainly the divine Mind; but God does forbid man's acquaintance with evil. Why? Because evil is no part of the divine knowledge."

The act of God, or divine Mind, is a joyful thing for men to know, because what proceeds from infinite Truth is a blessing beyond measure. It is the divine emanation of intelligence, boundless good, or God, and is always actively unfolding. Far from being storms, sickness, and death, it is the Christ, or Truth, which nullifies all their claims to reality. Christ Jesus demonstrated the act of God, or Principle, when, through his spiritual understanding, he accomplished the stilling of the tempest on the lake.

The act or activity of God, then, being beneficent, must be more and more before the attention of men in place of that so-called "act of God" which is a bald counterfeit and imposition upon mankind, and which stands in law books, in legal documents, and in thousands of cases as a reproach to Him who is the eternal. "When will the error of believing that there is life in matter," Mrs. Eddy asks (Science and Health, p. 205), "and that sin, sickness, and death are creations of God, be unmasked? When will it be understood that matter has neither intelligence, life, nor sensation, and that the opposite belief is the prolific source of all suffering? God created all through Mind, and made all perfect and eternal."

["Making Ethics Reasonable"-From The Dearborn Independent]

There is a very general belief that American common education is lacking in one important aspect, namely, the inculcation of a sound moral element. That is not to say, of course, that the trend of education is immoral, or even unmoral. There is a certain moral element in the very nature of study, in the very act of imparting knowledge. There is a sense of honor which makes itself felt at every examination, and there is also an atmosphere of clean competition in both studies and sports. Moreover, the daily contact of young people with men and women who have devoted themselves to the welfare of the young and who maintain a very high degree of idealism even in these too practical times, is undoubtedly the source of much moral inspiration, if not of definite moral instruction.

It is possible to teach morals in a way to fix in the youthful mind the truth that "being good" is not merely obedience to an arbitrary rule, but is a scientific observance of some of the deepest laws of nature. Every child is told, for example, that "it is wrong to tell a lie." It is right that the child should so be told. But why is a lie wrong? The child is seldom told that. A lie is morally, socially, and economically wrong, it is morally, socially, and economically dangerous and disruptive, and if this idea were firmly planted in the

why the right is right.

practiced in and through the church.

live in a universe of moral laws which are as unsafely vio-

lated as are the natural laws. Indeed morality is a natural

law. The question then comes, After having taught the sci-

entific basis of ethics, how can you supply the motive for men

to live up to what they know? Here the spiritual aspect en-

ters. That need not be discussed now. A great step toward

the right would be made, however, if only we would explain

[Intercollegiate News Service, Intercollegiate Prohibition Association, Chicago, Illinois]

"As goes China in the next two decades, so will go the Orient in the next century." We may expect that the Orient will be under prohibition régime during the last half of the twentieth century and the first half of the twenty-first century. As evidence that China will go dry in the next two decades, we have the enthusiastic activity of the Chinese students in prohibition in this country. A year ago they

formed the Chinese Students' Prohibition League, with

eleven definite objectives. Of these, seven have been suc-

cessfully achieved, one will be completed in November, and the groundwork is being rapidly completed in China for the

channel through which He acts upon human life,' the Bishop said in this connection. . . . for release of spiritual resources in the church which have been neglected hundreds of years and which, if set free and used with devotion, are certain to work in modern life the

a healing ministry in that it represents our Lord and is the

same 'miracles' they wrought in the first centuries of Christianity."

[295]

dents; leaflets were translated and then distributed in large numbers in the native tongue in China; research work was carried on and the results given publicity; and oratorical contests were held. "The sole purpose of the League," say the Chinese students of the University of Michigan, "is to prevent foreign brewers from carrying their business bodily into China. Pro-

other three items. A membership campaign resulted in en-

listing over one thousand members, or more than half of the

Chinese students in America. A financial drive was highly

successful; large quantities of literature on the subject were

distributed to the members and to the other Chinese stu-

hibition work is nothing if America is dry and at the same time China becomes more wet. The real success of the prohibitionists is to drive all liquors from the surface of the earth, for this alone means benefit to everybody."

"How and Why Prohibition Came to America," by Harry S. Warner of the Intercollegiate Prohibition Association, has been translated into Japanese and a copy given to every member in both houses of the Imperial Diet, which is now in session. This same little pamphlet has been translated into Spanish and is being widely distributed in South American countries. Temperance organizations are using it to good

advantage in South Africa, and there have been numerous calls for it in large quantities in India.

[From Public Opinion, London, England]

"Mr. A. J. Balfour, speaking on 'Religion and Ethics,' in the Congress of Philosophy at Oxford, said there could be no more important subject. . . . 'I am not one of those who think that morality cannot exist apart from religion, but that really does not settle the question. It would be very difficult for men in the future to preserve the highest morality if they got the idea that the world had been made mechanically and irrationally."

[Introduction to a Christian Science Lecture in St. Louis, Mo.]

The whole world is to-day looking for relief from its various perplexing problems. There are almost as many problems as there are individuals, so enumeration of them is an impossibility; we do, however, in their final analysis, deal with all of them when we sum them up as a lack of peace of mind. One person thinks a gain of some material thing would solve his problem, another needs physical help, another social position, another power and authority; all feeling that the attaining of a particular desire will enable them to be at peace. The Bible, when properly understood, states from cover to cover that there is no peace except through spiritual understanding. In the explanation of the Bible given to us in the teachings of Christian Science, this understanding is put within the reach of all honest seekers. Jesus of Nazareth said that we must become as little children; by that of course he did not mean physically, but like little children in having

an open mind. The material world is governed by the material senses, that is, by what they see, hear, feel, taste, and smell, but all truth is seen only through the spiritual sense, mental discernment, understanding. To illustrate, we see the earth as flat, but we know, through understanding, that it is round; we see with the physical sense of sight the sun coming up in the morning and going down in the evening, but we know, through understanding, that it does not move, that it is the earth which revolves. So it is that when we want to deal with the spiritual we must be willing to set aside the physical sense testimony and become as little children having an open mind, willing to accept the statements, instruction, of those who by demonstration have qualified as ones who can speak with authority. If we will do this we shall quickly reach results which will be satisfying and convincing; in so doing we are working out our own salvation and sooner or later come into that spiritual understanding which is the source of a peaceful mind. In other words, we are becoming acquainted with the God who truly heals all our diseases.

4

[From The Congregationalist and Advance]

The restlessness of our day and the demand for direct action that has come to us out of the war may lead us to forget how rapidly we are advancing in the industrial world. There are many indications that the relationships of capital and labor in a good many quarters are rapidly approaching Christian standards. . . . These examples encourage us to believe that we are not to settle down to a state of warfare between capital and labor, but that we are moving on to industrial peace founded on mutual sympathy and understanding. Just what form social-industrial organization will take we cannot now predict but we are surely on the way to better things. Twenty-five years ago the clothing of the country was produced in sweatshops. It is a long cry from that day to the modern clothing factory with the forty-four or fortyeight-hour week, good wages, and sanitary conditions. . . . "Watchman, what of the night?" "The morning cometh"!

4

[From "Political Systems in Transition" by Charles G. Fenwick]

The history of national governments has made it sufficiently clear that programs and institutions have in themselves no saving grace, and that they can but depend for their successful operation upon the spirit of friendly cooperation which animates them.

[On True Peace and Journalistic Reform]

"War-making is now a habit: the great war has made war familiar and frequent, and may assuredly, in a sinister sense of the oft repeated phrase, prove to be the war which will end war—by ending mankind! That we shall seize ourselves in time, shall flout the Furies that hurry us on to our fate, and shall escape from war by the sole available path,—not that of half peace, which only leads round the center of the maze, but that of true peace among peoples,—I cannot doubt. But for this we need a change of heart," says Sisley Huddleston in *The Atlantic Monthly*.

Despite the, to him, appalling condition of the world, Mr. Huddleston "cannot doubt" that there is a way of escape, and this same confidence is found voiced again and again in current periodicals, although there is apparently no reason for it, if sense evidence alone is considered. It is not, however, just vague optimism. It is based on the fact that good exists and evil does not in reality. There is need only of a "change of heart," or of thinking, and, as Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 371), "The necessity for uplifting the race is father to the fact that Mind can do it; for Mind can impart purity instead of impurity, strength instead of weakness, and health instead of disease." Through Christian Science is coming all needed reform, including that of journalism, which Mr. Huddleston feels is so urgent. He says on this subject:—

". . . If the journalist is a charlatan and not a priest, a charlatan who can always be relied upon by governments to disseminate false news and views, society is living on a lie. To live on a lie is as dangerous as to live on a volcano. . . .

Is a journalistic reform possible? The journalist must fulfill his functions as the modern priest. If he told the truth, the whole truth, and nothing but the truth, wars would assuredly not be possible. . . . The lack of perspective, or truth, in the trifling items which make up our newspapers, means a lack of perspective and of truth in the gravest parts of the journals; for nothing is so infectious as this slipshod, facile, irresponsible method of recording the world's events. One of the institutions which have suffered most in reputation because of the war, owing to the bourrage de crâne which was practiced, is the press, and nothing will be put right until there is a reform of the press. It is not only ruinous to the intelligence of nations and disastrous to their morality to feed them upon lies—it is in a definite and demonstrable manner fatal to them in a strictly material sense."

It is encouraging to find statements like this last one. For centuries the human mind has readily admitted that a lie is morally wrong, and the reason that lying has persisted is because of the generally accepted belief that it is convenient and practical. It is good to have this belief challenged.

[Lord Eustace Percy in The Pilgrim]

The whole phraseology of living political debate is stamped with the imprint of religious thought, however little the debaters may often realize the derivation and implications of the words they use. A visitor from another planet, intent on understanding modern movements and discussions, might, without appreciable loss, eliminate Locke and Herbert Spencer from his studies, but he would find a knowledge of the history of the Christian faith essential to an intelligent appreciation of Mazzinian nationalism or the proceedings of a British labor conference. . . . No one who has lived through the last six years can doubt for one moment that men's interest in our days is concentrated on the moral aspects of politics. Economic science and the ordinary categories of political theory have been left far behind. . . . If established governments are to counteract the influence of the revolutionaries, they must display an equally clear consciousness of the foundations of their authority and the purpose for which they exist. If public opinion is not to fluctuate vaguely between the claims of nationalism and internationalism, we must know clearly what is the sphere of national government, and what are its duties toward other governments. We must return again to the old questions that have occupied the minds of Christian moralists and political thinkers in all ages, not as the relics of barren controversies, but as the living forces by which political action is, and always will be, governed and determined. . . . We have seen that purely political or economic philosophers cannot fully answer our questions. We have agreed that the moralists shall regulate our treatment of the crew and our care of the cargo that we carry, but their dictates cannot suffice to guide our navigation. We need a deeper philosophy, and we hesitate between Lenine and an alternative of which we are vaguely conscious, but which we have never heard defined. This is the living stuff of politics to-day; and if there is such a thing as a Christian view of politics, not copied from current philosophies or adapted to current movements, we demand urgently to hear it.

["Churches Unite on World Friendship"-from The Christian Science Monitor]

1

of the sudden outbreak of the war. Thus the first conference had to be postponed until last year, when it assembled at Oud-Wassenaer, Holland. The second took place recently in St. Beatenberg, near Interlaken, one of the most beautiful resorts in the splendid mountain region of the Bernese Oberland. With regard to quantity and quality of the participants, this conference was much ahead of its predecessor. It proved the constantly growing conviction of the Protestant churches that it was their duty to work for international friendship and to advance the cause of pacificism by indefatigably spreading the spirit of Christianity. There were delegates of the national committees of twenty-three countries. The most numerous and representative delegations were those of the United States, England, and Germany. The interest and importance of the conference were greatly increased by the presence of a considerable number of clergymen of the Greek Orthodox Church. This was the first occasion for close cooperation between members of the Protestant and orthodox churches.

Most of the resolutions discussed were carried unanimously and a most harmonious disposition reigned supreme in the Beatenberg discussions. The spirit of the conference is well illustrated in the resolutions dealing with foreign politics, which were as follows: "This conference repudiates the double standard of morality, by which ethical demands are limited to private life. It holds that there is no standard for human life but Christ's law of righteousness and love. Accordingly it maintains that it is only by an increasing application of Christian principles to international affairs that there is any hope of fellowship and peace between nations."

.

[From The Freeman—Commenting on Shelley's Recently Published Pamphlet Written One Hundred Years Ago]

Shelley was writing in times very much like our own. A long and terrible war had been waged and won. People looked in vain for the prosperity that had been promised with peace... the national debt had reached a huge amount; there was much distress, much smouldering unrest, bursting here and there into open flame. . . . We can now see that his suggested reforms were far too simple to cure all human woes. We know now that however clean our sweep of kings and priests and officials and even of the state itself, the Islands of the Blessed would not necessarily be reached. We know that it is in the heart of mankind itself that the evil darkness lies brooding, and only by the diffusion of internal light can the borror of that darkness be dispersed.

[From The Biblical World]

Several years ago, when the first sensational discoveries were being published regarding radium, a physicist was asked what he supposed scientists would do with their theories of matter. He paused a moment, evidently recalling the great struggle with which these theories had been formed, and then bravely replied, "I suppose we shall have to revise our theories of matter." That is a true scientific attitude—which, after all, is only another word for honesty. . . .

A readiness to revise beliefs because of new evidence is very different from restlessness. A man is not necessarily following truth because he gives up some belief. The real test is reason for his action. Liberality is not the same as unbelief. A religious belief ought not to be modified unless such action is compelled by evidence substantiating a better belief. But if the churches are to develop and meet our modern world it will be because the young men and women just now entering upon active church life are earnest enough

and brave enough to do some religious thinking. Good intentions must be controlled by good sense, which is only another word for intelligence. To change one's mind in the interests of larger truth because of the force of evidence which a man has taken trouble to examine is not only an honest act; it is also a Christian act.

4

[From "The Price of Progress" in The Hibbert Journal]

All our questions are concentrated in the cross of Christ. Ecce Homo! There was a being pure and true in body and soul, unique in moral power and insight, suffering the worst shame and agony at the hands of a few scheming priests and Roman executioners. The very things that were best in him they took advantage of, in order to wreak upon him their worst. It might indeed seem as if the worst things in the world were there, working unrestrained, and doing their worst. And as men watched that scene in imagination, they might have said—as they have said of many lesser Calvaries of human suffering and sacrifice,-"There is no God, there is only the devil," only a malignant or a blind and purposeless power. Yet an instinct in the heart of the world has judged otherwise. As men have watched that scene in imagination, they have said, "There is no devil, there is only God." They have perceived something more than the shame and agony, more than the short triumph of policy and priestly intrigue; they have perceived the highest thing in humanity, gaining through seeming defeat its perfect victory: the love which means the entire willingness of a human soul to give the uttermost for the whole. The priests, the executioners, and the wondering crowd have gone; but that cross dominates the ages still, because love, thus triumphant, is the divinest thing the world has known.

[From The Christian Register]

As good citizens we trust the only way we know for determining what is well for us, and however much we may differ about what that may be before we cast our solemn suffrage, the day after we are again, both above and beneath, one people. It is right and wholesome that in the election seasons we should wrestle in all conscience with issues which befall, and no less with issues which we create, for only thus can we hope to clarify and decide for ourselves.

Those of us who have a professional interest in religion -we who profess and call ourselves Christians—have been taught in our churches to believe that our republic is builded upon a spiritual foundation, whose corner stone is freedom; as we have also been taught that freedom may safely be vouchsafed to all people because in their heart of hearts they want to do the right. . . . We shall come nearer and nearer to a true republic when in each challenge which confronts us in the form of an election we shall make it impossible for any one to count us before the men and the issues involved are known. To vote in advance is not to vote at all. We believe every consistent religious person, every church member, grows more and more in the disposition to weigh solemnly and independently what is that good and acceptable thing for the state and the kingdom of God. We are certain that the spirit of religion grows in the practice of politics.

٠

[Rev. Frank S. C. Wicks, as Reported in The Boston Herald]

"There never yet has been an example in history of the proper relation of church and state," he said. "We have seen churches dominated by the state and we have seen states dominated by a church. But that is where evil can triumph most easily,—where there is a division of forces. Religion

used to be considered an interloper in business. That is the pit into which we have fallen.

"Some of our commercial pirates are very pious men. But there again is the real trouble. They have exported their religion and haven't enough left for home consumption. Religion should touch all points of life, and not until it does can politics be purified. In the past there have been many conflicts between loyalty to God and loyalty to country. Men, in order to live up to the dictates of their conscience, have been forced to break with existing government. The ideal religion will purge patriotism of its narrowness, for devotion to conscience and to country will be as one."

[From Record of Christian Work]

The gospel has struck deeper root in Brazil than in any other Latin-American land. In number of organized churches and in membership Brazil leads South America. One striking feature of Brazilian church life is the number of persons from the educated class who are enthusiastic members. The government of the province of Rio Grande del Norte has offered to turn over to the Presbyterian mission the direction of its school of agriculture. This occupies four thousand hectares of planted land, and is provided with the buildings needed to operate an evangelical institute for young people, with an annex for agriculture.

Church Notices

* * *

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. One such letter follows:

Tone time I was engaged in newspaper work on the leading paper of my home state, so I feel safe in saying that only the sheet hot from the press is of interest to a news gatherer. After becoming interested in Christian Science and seeing others reading The Christian Science Monitor fully a week old, I made up my mind that though Christian Science was all right as a religion, it should never lull me into such a state of passivity that I would willingly accept a newspaper which was not new. It was many years before I would permit myself to grow past this point of self-satisfaction. More than once my embarrassment has been keen, when discussing some leading question of the day with an acquaintance who was not a Scientist, to have her quote to me from "your Monitor." Finally in self-defense I determined to acquaint myself with this paper. At this time I was living in Chicago and reading every daily paper in search of "Items of Interest" which I re-edited for a child's magazine. The Monitor then cost two cents a copy and my first investment of six or eight cents, for what seemed to be old papers, brought me immediate returns of more than the cost of a year's subscription for this "stale sheet," as I had previously called it. The return in dollars was small indeed when compared to my joy at becoming familiar with this great international daily newspaper. With each succeeding year my love for and appreciation of the Monitor has grown apace. Kindly extend my subscription, for which please find inclosed -

Superstition

JOHN M. DEAN

THROUGHOUT the ages mortal thinking has continuously and with not infrequent success attempted to graft superstition on every form of religion and worship. A mere human process of thinking renders obscure and abstract the teachings of the Old Testament and clouds the deep spiritual import of the New. This false process of reasoning has largely made of the word Christianity a haphazard term to be loosely applied to any form of teaching which professes to regard Jesus as the Messiah, and this without reference as to whether a superficial estimate of his mission is embodied in a material and formal creed or whether his pure spiritual teaching is exemplified in a lofty and practical religion which finds its manifestation in good deeds.

Now, viewed in the only light in which the Scriptures should be regarded,—that is, from the standpoint of spiritual interpretation,-there are no obscure passages of Holy Writ, and even seemingly conflicting statements are reconciled and coordinated into one harmonious whole. To the student of Christian Science even those passages which treat of material history are to be understood spiritually, for to be effective the Bible must necessarily lay bare the nature of error of every sort in order that, being uncovered, it may be recognized for what it is and thus destroyed. A consistent study of the Bible in the light of Christian Science presents a continuous unfoldment and must finally result in the uncovering of the purpose and meaning of all things. Nothing in the realm of Truth is unknowable. How careful, then, should we be to discriminate between the true and the false. Paul exhorted Timothy to be "a workman that needeth not to be ashamed, rightly dividing the word of truth," and this demonstrable teaching is reflected in every line of Mrs. Eddy's book, "Science and Health with Key to the Scriptures."

Superstition attempts to work in many devious and subtle ways. It should not be thought that a belief in such things as spirit communications, in lucky and unlucky times, seasons, or places, or in the power of a man-made god of wood or stone constitutes the only form of superstition with which the human mind is obsessed; nor should it be thought that the ignorant in education or experience are its only victims. Broadly speaking, any belief in a presence or power opposed to God is a superstition, and regarded thus the word takes on a wide definition. Most professed Christians will readily concede that God is Spirit, and when this is acknowledged it should at once be seen that every erroneous thought is, in the degree of its unspirituality or wrongness, a superstition. Thus it becomes plain that to attribute power to drugs or to any other form of merely material practice or worship, is a phase of superstition, regardless of how respectable custom may have made it appear.

The observance of times and seasons is a deplorable form of superstition, and if indulged must rob religion of its spiritual power. All of good is everywhere all the time; therefore

there should be no occasion to emphasize good at one place or time more than at another. This is, of course, an absolute statement which needs to be demonstrated by degrees, and this will be done by persistently holding to the ideal of perfect God and perfect man, however necessary may seem the human footsteps to be taken in reaching this goal. Thousands of individuals are measurably demonstrating the possibility of this ultimate attainment by taking their religion into their daily walk and conversation and utilizing God's ever presence in all the affairs of life.

Just as ignorance and fear furnish the only basis for superstition, so understanding and spiritual courage are its sovereign antidotes. When Mrs. Eddy said (Science and Health, p. 86), "Mortal mind sees what it believes as certainly as it believes what it sees," she uttered a truth which, when understood, will explain a multitude of mysterious and so-called supernatural occurrences. Like always produces like; therefore the myriad qualities of thought manifested by individuals form ofttimes widely varying conceptions of the same thing. The human mind, steeped in ignorance or fear or some other form of obsession, evolves thoughts which may be objectified in a manner incomprehensible to one more enlightened, and these gradations of human belief will continue until all come to a perfect understanding of the creator and His creation.

The conception of a personal God is on all fours with the conception of a personal devil, for both beliefs are born of superstition. Every man's God is no more nor less than his concept of God, and no other God is available to him until his concept changes. One mortal may evolve a god of wood or stone, while another may bow down to a medicine bottle, to a formal creed, or to some sinful habit. Multitudes even appear to worship a vague enlarged human personality who lives in some distant heaven and delights equally in punishing and blessing. Until better instructed, each worships and utilizes the god of his own creating; yet always there exists the one infinite God who is to be worshiped "in spirit and in truth," but who is seen only as thought is uplifted to behold Him. To invest a so-called corporeal personality with either sanctity or malevolence is gross error, and it is equally wrong so to regard places and things. Goodness is impersonal and immortal because God made it, while evil is impersonal but perishable for the opposite reason.

The erroneous philosophical, medical, or religious beliefs of others cannot harm one, and to believe that they can is to put one's own beliefs on the same level. One's fear of such things endows them with the only power they seem to have, and when the nothingness of their asserted influence is seen, that is the end of it. This is not to say that one should be unmindful of the claims of error of every sort, but these claims need to be clearly and promptly recognized as neither person, place, nor thing, and this understanding deprives them of their only claim to power. To deny the existence of a personal devil and then to substitute therefor a belief in the power of evil manifested through wrong thinking or in any other way, is simply to change the form of the one evil and to

endow this new devil with all the diabolical qualities of its predecessor.

Christian Science has come to the world to destroy superstition, for, as Mrs. Eddy says (Science and Health, p. 83), "Between Christian Science and all forms of superstition a great gulf is fixed, as impassable as that between Dives and Lazarus." A Christian Scientist largely avoids the entanglements of superstition by doing his own thinking, and individual thinking is the salvation of mankind. Mrs. Eddy's inspired teachings constitute the basis for true spiritual growth, and each student must build on the basis there laid down. Teachers or practitioners can render invaluable help by pointing out the way; but even these are helpful only as they adhere to the strict letter and spirit of divine Science. Tradition and rumor are no part of this Science, and Paul's warning, "Prove all things; hold fast that which is good," is as apt now as when first written.

To accept, either in precept or practice, the infallibility of some mortal personality is to build on tradition and thus throttle that individual and impersonal concept of Truth which is essential to the growth of understanding in human consciousness. Personal domination is a baneful influence, however beneficent it may appear. There is room for only one Leader in the Christian Science movement, and her leadership is rendered imperative by her great spiritual discovery, which is fully set forth in her published writings and is demonstrable alike to all. The mission of Christian Science is gently to force progressive achievement, and it will operate slowly or rapidly in the degree of the individual, spiritual alertness of its followers. Living in the past will not accomplish the work of the present. Good is immortal; therefore all the good that ever was is available for the needs of to-day. But there is no need for outgrown methods, however plausible their argument. Divine Science is never speculative, credulous, or reactionary. In her article entitled "Christian Science" (Miscellaneous Writings, p. 235), Mrs. Eddy makes this profound statement: "This movement of thought must push on the ages: it must start the wheels of reason aright, educate the affections to higher resources, and leave Christianity unbiased by the superstitions of a senior period."

What Is a Christian?

AGNES MORLEY CLEAVELAND

ONE of the interesting propositions that is engaging the world's attention at the moment is the possibility of communication with the planet Mars. Of course speculation about the mental processes of the supposed Martians is a more or less profitless pastime, but for the sake of concrete illustration, let us presume that invention has made it possible for a Martian visitor to land upon this earth. Naturally the larger and fundamental viewpoints of the respective peoples would be the first information sought on both sides and one of the very early questions on the part of the Martian would be, What is meant by the term Christian? Of course he would be told that a Christian is one who believes in Jesus the Christ, and this statement would be amplified by the story of Jesus' earthly career. But this alone would not satisfy the questioner who was seeking to discover why Jesus the Christ has for more than two thousand years been regarded as the Way-shower for millions of people on the earth. The exact import of his message would, of necessity, be demanded.

If one wishes to test his own concept of Christianity, let him mentally answer this hypothetical other-world inquisitor. And can we not imagine that if he put this question, What is a Christian? to many persons in widely separated geographical areas, the bewildered man from Mars might begin to doubt if professing Christians really knew what they professed? If, on the other hand, the question were put to a true metaphysician, as the term is understood in Christian Science, the answer would be instantly forthcoming in terms so concise and convincing that the questioner could not fail to grasp the truth and forthwith acknowledge himself to be also a Christian.

Let us suppose that this assumed seeker for information had not, previously to propounding his question, been told anything of the human story of the Bible, so that he could not be answered by citing the Scriptures as authority, but must needs be convinced through the medium of pure reasoning in which he himself could participate.

The exposition would, of necessity, be something like this. "You acknowledge, of course, that you exist; that you are not self-created, and therefore your existence is proof of the existence of a creator. This creator must be one, and one only, as more than one would presume a still antecedent cause. Thus the self-evident fact is that there is one infinite, self-existent cause or creator. This creator or cause must be good, in order to be self-existent, inasmuch as evil signifies destruction, and evil in cause would be self-destruction from which there could be no effect. Now one's own existence precludes the possibility of this argument; so the inevitable and only possible conclusion is that the one infinite cause, or God, is good, and, cause being good, effect must be good. Nor can there be two effects from cause, one like it and one unlike it; therefore the conclusion is inevitable that effect is one and good."

This would be a logical point at which to draw attention to the Biblical parable of the fountain, which doth not "send forth at the same place sweet water and bitter," and to explain that all of the allegories in the Bible are for the purpose of emphasizing monotheism, the oneness of God as Almighty, the all-might, the one cause. The conclusion would be self-evident to any reasonable person that Christianity and monotheism are the same and that monotheism is the acceptance of one cause and one only, phrased in Biblical language, "Thou shalt have no other gods before me."

Would not the Martian be compelled to acknowledge the exactness of this line of argument and to declare it therefore scientific, Christianly scientific? Nor could our hypothetical visitor be long in our midst before the words "Christian Science" would be brought to his attention, and after having had an explanation of Christianity such as has just been given, he would at once see that the two are identical-Christianity and Christian Science. He would perceive that the Bible is a record of men's growing vision of monotheism, of the one Supreme Being, the unrivaled cause of the true spiritual universe. As this fact became clear he would undoubtedly turn to the Scriptures and there find full confirmation. Beginning with the story of Abraham, who was the first man of whom we have record to catch a glimpse of monotheism or the oneness and universality of cause, the Bible is a series of narratives of what transpired in human affairs when these were brought into the orbit of correct reasoning. It is a record of the transition out of paganism,—the belief of more than one cause,-into Christianity, the absolute knowledge of God, the one infinite, perfect cause.

David's query, "Why do the heathen rage, and the people imagine a vain thing?" had its antipode in Solomon's admonition, "in all thy ways acknowledge him." On page 12 of "Christian Science versus Pantheism" Mrs. Eddy writes: "The Science of Christianity is strictly monotheism,-it has ONE GOD. And this divine infinite Principle, noumenon and

phenomena, is demonstrably the self-existent Life, Truth, Love, substance, Spirit, Mind, which includes all that the term implies, and is all that is real and eternal."

The pagan viewpoint is that there is more than one cause, more than one noumenon. This alleged dualism is set forth in the allegory of the garden of Eden. In the first chapter of Genesis we read that "God saw every thing that he had made, and, behold, it was very good," perfect cause expressed in perfect effect. Then the figurative mist went up from the earth, or in modern phrase, confusion arose, and two causes were alleged, the "gods, knowing good and evil."

All the prophets of the Old Testament and Christ Jesus and his apostles and disciples of the New, denounced this fallacy throughout all of their teaching. Of them all Jesus, perhaps, put it the most concisely when he said, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind." Of the supposed power called the devil James said, "Resist the devil, and he will flee from you," not as an actual entity going from one place to another, but as a false theory or belief disappearing, a belief which Jesus also said, "abode not in the truth, because there is no truth in him."

Mary Baker Eddy, more than nineteen hundred years later, brought the same message, couched in the language of her own day and generation. On page 468 of "Science and Health with Key to the Scriptures" she says, "All is infinite Mind and its infinite manifestation, for God is All-in-all."

So the test of what constitutes a Christian is the same today as it has always been, and that is to be an adherent of the truth that there is one, and not more than one, noumenon responsible for the phenomenon which is the true universe and all that therein is. But this is just what the human mind rejects,—the human mind being but another name for illogical reasoning. Illogical reasoning insists that the suppositional opposite is an actual entity and that there must of necessity be the power responsible for good and a rival power responsible for the so-called evil, and to this alleged, but actually nonexistent, rival many names have been given throughout the ages. Beginning with the name serpent, typifying a voice for evil, through a list which includes devil, red dragon, and others, we have arrived at the most modern designation, used by Mrs. Eddy,-error, mortal mind, or animal magnetism. And throughout all of this successive change in nomenclature the test of a Christian has been the same: Does one accept the claim of an opposite to the one power as a reality or does be reject it as a lie?

Jesus warned against putting old wine into new bottles, and that warning stands for every Christian Scientist to-day. Are we really rejecting the possibility of so-called mortal mind being a mind in competition with divine Mind or are we sure that divine Mind is infinite not only in time and space but infinite in its power of expression, leaving no room for any other expression? Mrs. Eddy is unequivocal on this point. In her definition of mortal mind in the Glossary of Science and Health (p. 591) she says: "MORTAL MIND. Nothing claiming to be something, for Mind is immortal; mythology; error creating other errors; a suppositional material sense, alias the belief that sensation is in matter, which is sensationless; a belief that life, substance, and intelligence are in and of matter; the opposite of Spirit, and therefore the opposite of God, or good; the belief that life has a beginning and therefore an end; the belief that man is the offspring of mortals; the belief that there can be more than one creator; idolatry; the subjective states of error; material senses; that which neither exists in Science nor can be recognized by the spiritual sense; sin; sickness; death."

There remains only the explanation of the phenomenon called evil, and that explanation is extremely simple. Evil is the illusion that a lie is a fact, and can only seem to be phenomenon to mistaken sense. It is, furthermore, a lie to say that there is even a mistaken sense. The misstatement itself is the origin of the hypnosis. A misstatement is instantly destroyed when the correct statement is substituted for it, and with its destruction goes all the hypnosis or illusion of evil, that supposed competitor to omnipresent good. Reducing this to extremely modern language: Do not tell a lie if you wish to escape the mesmerism of the lie. Now it may be asked, How am I to detect the lie every time so that I may reject it? We have an unfailing test for that. Is the statement, whatever it may be, a true statement about God? If not, it is not a true statement, for God is All. So a statement based upon a supposition of more than one influence or power is a denial of the all-might, personalized as the Almighty. To acknowledge God as Almighty constitutes a Christian. Of course acknowledgment includes action as well as words. When a true statement is enacted it is one's religion, otherwise it is merely a philosophy; so a Christian is one who not only states in words but lives the truth he knows.

Christian Science as an Asset

E. R. BARAGER

THAT Christian Science is really an asset for the business man can be undeniably established; in fact, the evidence of Truth's demands in business began to accumulate nearly two thousand years ago, when Jesus, answering the anxious questionings of his earthly parents, Mary and Joseph, replied: "Wist ye not that I must be about my Father's business?" While the references in Holy Writ to business, as we understand the term to-day, are not voluminous, they are sufficient to satisfy us that no inconsiderable weight was at that time given to the transaction of business, and, in the second chapter and fifty-second verse of Luke, we are also told that by reason of his strict attention to and diligent effort in the prosecution of the Father's business Jesus "increased in wisdom . . . and in favour with God and man."

Turning to the record as given in the Old Testament we find in Proverbs this very suggestive admonition: "Seest thou a man diligent in his business? he shall stand before kings; he shall not stand before mean men." And what does this mean? Surely no less than that the man who is diligent in his own business, if that business and that diligence square with the Golden Rule, shall most certainly not only find favor with the right kind of men, but he shall also inevitably be "about the Father's business," as well.

One of the most prevalent errors that appears to cloud the horizon of human kind is that to be "about the Father's business" is a sort of one-sided affair. In other words, that to enter upon a godly life to any considerable extent or with any particular degree of fervor means the giving up or changing some part or element of one's daily business activity; that a business man, if he would be a Christian, must of necessity be different in business from what he has always been. Not by any means! If his business methods and daily life have heretofore been in accord with the Sermon on the Mount, there will be only unfoldment. It will still be necessary for him to "put off the old man." An excellent method of doing this Paul gave most definitely in the twelfth chapter of Romans, when he said: "I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service. And be not conformed to this world:

but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

The fact of the matter is that a faithful study of Christian Science and a sincere application of the teachings of the Bible, as so succinctly and clearly explained in "Science and Health with Key to the Scriptures" by Mary Baker Eddy, ought to, and will, convince the business man that he cannot afford to remain outside the influence and protection of God's promises to them that know the truth. This truth we now know to be Christian Science, and its relation to business has been well stated by Mrs. Eddy in Science and Health, on page 128, as follows: "The term Science, properly understood, refers only to the laws of God and to His government of the universe, inclusive of man. From this it follows that business men and cultured scholars have found that Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity." What more than this can a business man ask or desire?

The Festival of the Morning Star

HARRIET BRADFORD

IN "the Revelation of Jesus Christ," John records that the angel "like unto the Son of man" bade him write to the church at Thyatira: "And he that overcometh, and keepeth my works unto the end, to him will I give power over the nations. . . . and I will give him the morning star." And in the last chapter of Revelation it is recorded, "I Jesus have sent mine angel to testify unto you these things in the churches. I am the root and the offspring of David, and the bright and morning star." As the emblem of spiritual truth piercing the darkness of mortal belief, the star is the sign that the understanding of the Christ is come within reach of humanity. Wise men followed it to Bethlehem, "where the young child was," but when they found him, they bowed before the infant Jesus and attempted to worship with costly material offerings the concept of Truth that he heralded. Down the ages the human so-called mind has confounded matter and Spirit. Religious reformers who have glimpsed in part the divine inspiration have missed scaling spiritual heights by turning aside to popularity, that winning of the people, that succumbing to the belief in minds many and their power, which denies the allness of God and the dominion of man in His likeness, and materializes worship.

In this connection, it is of at least passing interest to the student of Christian Science that in the early history of the Christian church the feast of Epiphany, celebrating the baptism of Jesus, was observed some two centuries before the feast of Christmas, the "mass of Christ" or the celebration of the nativity of Jesus. The word Epiphany comes from the Greek $\hat{\epsilon}\pi\hat{\iota}$ (upon) and $\phi\alpha\nu\delta\varsigma$ (light) and was the regular Greek word for the appearing of a divine being. In Christian terminology it refers to the manifest descent of the Holy Ghost upon Jesus at his baptism by John, as recorded: "And Jesus, when he was baptized, went up straightway out of the water: and, lo, the heavens were opened unto him, and he saw the Spirit of God descending like a dove, and lighting upon him: and lo a voice from heaven, saying, This is my beloved Son, in whom I am well pleased." Early students of Jesus' teaching clung fast to the spiritual significance of his mission and to the spiritual essence of worship. Later students set time limitations upon his mission, marking it into epochs and celebrating these by feasts, notably the feasts of the baptism

and the resurrection. But even in these the spiritual significance was uppermost. At this time, the physical birth, or natalis in carne, as it was termed in sermons and homilies, was held to be of little importance. But between 350-440 a.d., and first in the west, where Roman influence was strong, materialization of thought culminated in the celebration of feast days,—an attempt to bound the Christ-thought not only by time but by bodily structure. Significantly, at about this period, so-called Christians ceased to heal the sick as Jesus had commanded, and Christendom lost the spirit of the teaching of Christ Jesus, immersed as they were in controversy over the letter.

Of the feasts of the early church, Christmas most thoroughly seized the hearts of mankind. It became popular, for it gave the human mind a reed to cling to,—the subtle supposition that Spirit is or can be in matter. The doctrine about it brought a spiritual heaven to a material earth, brought material angels with spiritual messages, made so-called science (the astrology of the wise men) the interpreter of the sign divine, and clothed man in mystery. What better vindication could there seem to be for the human mind of its claim to divine sanction? But while the human mind plays the lie to reality, the ever present divine Mind is; therefore down the ages gleams now and again more brightly for a brief space the "morning star," linking together the seemingly broken connection between man and God. Alone of all religious reformers since Jesus, Mary Baker Eddy, Discoverer and Founder of Christian Science, saw in its full light the spiritual significance of his mission, and she gave to mankind her discovery, so firmly grounded upon the rock, Christ,the complete manifestation of divine Principle,—that neither popularity nor persecution can overthrow it. Writing of the meaning of Christmas, on page 260 of Miscellany, Mrs. Eddy says: "The basis of Christmas is the rock, Christ Jesus; its fruits are inspiration and spiritual understanding of joy and rejoicing,-not because of tradition, usage, or corporeal pleasures, but because of fundamental and demonstrable truth, because of the heaven within us. The basis of Christmas is love loving its enemies, returning good for evil, love that 'suffereth long, and is kind.'"

To stand upon the "rock, Christ Jesus," as quoted above, and to pierce the darkness of human belief with his comprehension of the "morning star" is the precious privilege of the student of Christian Science. By separating the true from the false in human festivals, he rejoices in celebrating only the reality of being, God and His idea. To this end the records of human history are useful, not to corroborate the facts of Christian Science,-divine Science needs not the witness of that so-called mind which it proves mere illusion,-but they are useful to show how the traditions and customs of the human race have been fabricated of the subtle serpent's lie that there is more than one creation. Recognizing the erroneous concept of Christmas for what it is, the Christian Scientist can at once replace it with the spiritual fact that the Christ is never born, is not temporal, but is the eternal manifestation of God's fatherhood expressed. The only nativity there is, then, is the dawning of the Christ-idea to human consciousness; the only baptism there is, is the purification that comes with acceptance of the Christ, Truth; the only resurrection is the ultimate ascendancy of spiritual over material so-called consciousness. And the only celebration there can be of these states of consciousness is the demonstration of them. The Christian Scientist does not cease to observe Christmas; he celebrates the coming of the Christ-consciousness whenever he replaces false material illusion with spiritual reality, and when the infinite tenderness of the Christ-

love reigns for him and guides him to express "on earth peace, good will toward men."

Of such spiritualized thought Mrs. Eddy writes on page 257 of Miscellany: "To the awakened consciousness, the Bethlehem babe has left his swaddling-clothes (material environments) for the form and comeliness of the divine ideal, which has passed from a corporeal to the spiritual sense of Christ and is winning the heart of humanity with ineffable tenderness." Whoever thus celebrates in its spiritual significance the appearance to human comprehension of the Christ follows the admonition of Jesus, "The hour cometh, and now is, when the true worshippers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him." So doing, he acknowledges the supremacy of good, God, overcomes evil, and by demonstration wins the promise, "I will give him the morning star."

Knowing Good Only

CLARKE F. HUNN

TF, at the approach or manifestation of evil, one knows with I the absolute certainty of Science, which renders contradiction unthinkable, that God knows good only, healing is instantaneous. That this is true may be seen from the simple fact that to know God as the only good and all-good and good only, is to know man as made in His image. Healing is the unshakable certainty that God cannot know evil, and once this expression of Truth reigns as consciousness, no other proof is needed that man, God's reflection, cannot know evil, and therefore that what is unknown to both creator and creation can have no existence, substance, or power. "God is His own infinite Mind, and expresses all," states Mary Baker Eddy on page 310 of "Science and Health with Key to the Scriptures." The knowledge that this "all" contains no slightest hint of sin, disease, or death, is the healer of mankind.

That good is all there is to know is, however, a direct affront to sophistication, that favored offspring of the false consciousness or supposed mind of mankind. This so-called mind deals in and feeds upon both light and shade. It is the Adam-mind, conceiving knowledge to comprise both good and evil. It hastens to assure the beginner in Christian Science, even in the midst of his first proofs of the healing truth, that he cannot forswear all at once the pride and fancied protection of sophistication. Such a one is thus apt to cling to the secrets of material existence, its tricks and subterfuges, the accretions of erroneous belief for which he has paid so dearly in the past. He often feels that to abandon his hard won knowledge of good and evil, and to accept the statement that God knows only the one and not the other, will betray him into a strange, one-sided, and uncertain universe. Believing the knowledge of good and evil to constitute mind, he is inclined to doubt the omnipotence of a God who knows good

Yet, because the beginner may not at once be able to apply successfully an understanding that God knows good only, is no excuse for balking this fact or refusing to accept it or to grasp it as best he may. That God does not know evil is indeed easy to comprehend, if one but considers the simple analogy of mathematics. "Evil" in mathematics is represented by the blunder or mistake, either in the misapprehension of rules or of omission or commission in applying them. Only one who has mislearned the fundamentals of mathematics can assume any sort of knowledge of errors; certainly the accomplished mathematician knows them not, and the more proficient he is, the farther is he from knowing

them. A hodge podge of correctness and blundering, of rules and their perversion, does not constitute mathematics. That two times two is seven is never true or real or substantial or powerful, no matter if the would-be good-and-evil mathematician substracts three from the product to make it so.

Mind knows good only. Truth embraces only that which is ever and eternally true. Divine Love is everywhere and All. That which is unlovely may have many things believed about it, but only one thing about it is true: that God does not know it and that it therefore does not exist. Against these simple statements the human mind rebels. The Adam-mind craves in its heavenly garden at least one forbidden tree, at least one possibility of something other than good. Give it this much, it declares, and it will rest content. This granted by the unwary thinker, the old tempter soon appears. Will the human mind allow this savory fruit of other than good to remain untasted? The answer is found on every page of human history.

No greater enemy is to be faced in all our journey toward Godlikeness than the belief that perfection must be flavored with just a dash of imperfection, that man can only approximate the true measure of God's man. This is, indeed, no less than the belief in death. "Drink and be merry," or, "Live and be fruitful," death adjures, "if to-morrow you will agree to die!" "Turn over a new leaf, and welcome, but keep your finger on the page, lest you lose mortal mind's inalienable right to turn back again if it chooses!" "Be kind and generous outwardly; there is no need yet to blot out the salacious thought within!" "This trifling lust for comfort, or luxury, or adulation, or human power . . . what does it matter in view of your advanced thought and devout understanding and demonstration in behalf of others?" Thus the arguments are presented; for, after all, all that the father of lies ever wants is to convince the thought that absolute perfection cannot quite be attained, and is not, indeed, to be desired, at least until "hereafter." Given the claim that man as God's image can know even ever so little of evil, and evil is content. Only the insistence that God knows good only, and that man knows good only, can defeat these attacks. On page 204 of Science and Health Mrs. Eddy tells us that this is the common trait of all forms of error, that they support false conclusions of evil and good as coexistent; and on the following page she asks, "When will the error of believing that there is life in matter, and that sin, sickness, and death are creations of God, be unmasked?" Then a little farther on she supplies the answer: "When we fully understand our relation to the Divine, we can have no other Mind but His,-no other Love, wisdom, or Truth, no other sense of Life, and no consciousness of the existence of matter or error."

[Written for the Sentinel]

The New Heaven

VIRGINIA HORNER

BEHOLD thy home created by God; Where angels, the pure thoughts, dwell; Where there is love and peace and joy, And melodious song doth swell.

Our Father is here and we dwell in Him; The forms of earth we see. We reflect His thoughts and rest in Truth And walk on the crystal sea.

The words that are spoken are spirit and life.
God spake—and it was done.
We also can speak and have our desire,
For His Mind is the only one.

"Seek ye first the kingdom of God"

It is a pity that the word salvation is used so commonly with such an entire absence of proportion. The result is that to the man in the street it has become largely meaningless, if not positively jargon. Writers, like Dickens, have pilloried the offense and the offender in caricatures such as Stiggins and Chadband, but that has aggravated the difficulty rather than ameliorated it. Yet the word after all simply means safety, and if a man's spiritual safety has come to mean nothing to him, then is he a materialist indeed. Christ Jesus, who was not merely the greatest moralist but the most wonderful Scientist whom the world has ever seen, knew better than any teacher what salvation really meant, and gave the quest of it the first place in his philosophy. "Therefore take no thought," he told his audience, in the greatest sermon and most wonderful scientific lecture ever given to the world, "saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

Now exactly what a man makes of this saying is, perhaps, the acid test of what Truth really means to him. It would be as ridiculous and impertinent as it would be unscientific to advise any one how to order his life so as to be in accordance with Truth. The problem is an entirely personal one, and should be wrought out by the individual, without criticism or interference from the outside. The issue is too vital a one for that, for it is never scientific to attempt or advise demonstrations beyond the understanding of the demonstrator. At the same time, the words are so direct as to leave little margin for mental quibbling; and piling Pelion upon Ossa in the way of delay always ends fatally. "The demands of Truth are spiritual," Mrs. Eddy writes, on page 170 of Science and Health, "and reach the body through Mind. The best interpreter of man's needs said: 'Take no thought for your life, what ye shall eat, or what ye shall drink." What happens to the man who takes undue thought for the morrow, Jesus made quite clear in the story of the rich man who, when his barns were bursting, determined to pull them down and build greater. "Thou fool," came the scorching comment of the man who had laid aside everything to save mankind, "this night thy soul shall be required of thee: then whose shall those things be, which thou hast provided? So is he that layeth up treasure for himself, and is not rich toward God."

The man who is rich toward God is essentially the man who is seeking first the kingdom of God, nor is there anything selfish in this. To be rich toward Principle a man must strip himself of everything in human consciousness outside Principle, he must set to work to become a sensual pauper, to be bankrupt of materiality. So far, however, from this being

selfish, it is precisely what Christ Jesus meant by taking up the cross daily to follow him. It represents a mental outlook which envisages a true love of mankind, since only as a man puts off the carnal mind, and clothes himself with the Mind of Christ, can he hope to begin to repeat those works of healing and salvation which were enumerated in Christ Jesus' charge to his followers.

It is obvious, therefore, that the way in which to seek the kingdom of God is by being rich toward God, and this, if it is to be accomplished, must be attempted, not by building greater barns for the bestowal of a man's materiality, but by opening those already in existence, and throwing out the contents. In a world of sensuous illusion, the great barn is the human mind. In that are stored all the material beliefs, all the sensual phantasies, all the animal desires, which, in turn, lead a man to build barns in which to bestow the material goods which are the product of his material thinking. This material thinking endeavors to counterfeit infinity by persuading its victim that there is no limit to his necessities, and that his material salvation is dependent upon his making provision for them. Christ Jesus, of course, exactly reversed this cart before the horse method of demonstration, "Seek ye first the kingdom of God, and his righteousness," he said, "and all these things"-food, drink, raiment-"shall be added unto you."

Fear, Jesus knew, was the root of a man's sensuality. Therefore he pointed out to his disciples how the birds were fed, and the lilies clothed more gloriously than Solomon. It is fear that brings a man into the world, fear of race exhaustion, just as it is fear of death that takes him out of it; and this, when scientifically analyzed, is fear of death in either case. It is this fear of death which threatens him with want and starvation; it is this fear of death which robs him of his home, and sends him out destitute and in rags; it is this fear of death which makes him sick and makes him sin; and its conqueror is Love. Love is the understanding that man is spiritual, an understanding which robs death of its sting. God is Love, and it is therefore Love "who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies; who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's." And because of this it was that the apostle John declared, "There is no fear in love; but perfect love casteth out fear: because fear hath torment;" and that Mrs. Eddy wrote, on page 411 of Science and Health, "Always begin your treatment by allaying the fear of patients. Silently reassure them as to their exemption from disease and danger. Watch the result of this simple rule of Christian Science, and you will find that it alleviates the symptoms of every disease. If you succeed in wholly removing the fear, your patient is healed;" and again, on page 365, "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit, and the disease will vanish into its native nothingness like dew before the morning sunshine."

Before, however, a man can hope to achieve real success in such healing, he must seek first the kingdom of God. To what extent he does this is purely a question between himself and Principle. When he counts his bonds, numbers his farms, or calculates his assets, he will know the justification for what he is doing. At the same time there is not necessarily any greater virtue in poverty than in riches. It depends somewhat how either be acquired. True riches is, of course, contained in an understanding of supply based upon the demonstration of Christ Jesus, an understanding which makes it possible to comprehend metaphysically something

of what is meant in the saying, "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt and where thieves do not break through nor steal: for where your treasure is, there will your heart be also."

FREDERICK DIXON.

"He that hateth gifts"

UNDERSTANDING of divine Principle is the true gift of God to man. In fact, infinite Principle is God, and understanding is the function of the real man in the divine likeness. The continuous gift of the great Giver reflects, then, the divine nature. Continuous spiritual understanding ever satisfies because of its endless variety. Spiritual activity in accord with Principle is what constitutes understanding of Principle, and this true activity is sustained by its infallible cause. The whole process of spiritual creation, unfolding eternally in the now, is the divine Mind's process of giving. The divine Mind is immortally producing its idea or expression, and thus is ceaselessly giving all good.

That, of course, is the truth of giving. It is the manifestation of infinite Love, altogether tangible to spiritual sense, richly enjoyable in its unfoldment. Any human sense of merely material presents is, at the best, a rather sorry counterfeit of the spiritual activity which expresses divine intelligence. Some beliefs about holiday giving may seem to be better than others, because in some cases the grossest material limitations have been superseded to a certain extent by the unfoldment of the one ever-loving Principle. This subsiding of the human sense of things in the presence of infinite Mind and its idea is what improves the so-called human circumstances. In other words, the less of mortal belief there even seems to be, the more is experience improved. So the less mortal selfishness, greed, or supposed satisfaction in materiality there seems to be connected with the giving of presents, the more can one rejoice that nothing real is lost but a broader joy is gained through the understanding of Truth. Of the Christian Scientist, Mrs. Eddy writes, on pages 359 and 360 of Science and Health: "I have spiritual ideals, indestructible and glorious. When others see them as I do, in their true light and loveliness,—and know that these ideals are real and eternal because drawn from Truth, -they will find that nothing is lost, and all is won, by a right estimate of what is real."

There are certain aspects of holiday giving, or of the expectation of gifts at any time, which have long been considered reprehensible. The Hebrews looked with suspicion and reproach on the mercenary seeker of gifts. One who is subserviently awaiting presents continually can hardly be reliable. An attitude of fawning, greedy receptiveness to materiality, is not deserving of confidence. If one thinks that gifts are his rightful perquisites, and others feel bound to appease that grasping expectation, the process of giving and receiving in such circumstances is so sordid and insincere as to be of no real value whatever. It was the looking for bribes, for satiation of mortal desires, for placation of insistent demands, for matter and ever more matter, that led to the phrasing of such a proverb as, "He that is greedy of gain troubleth his own house; but he that hateth gifts shall

It is interesting and helpful, in the light of Christian Science, to study the various Biblical statements about gifts. Thus in Deuteronomy we read, "Thou shalt not wrest judgnent; thou shalt not respect persons, neither take a gift: for

a gift doth blind the eyes of the wise, and pervert the words of the righteous." In Ecclesiastes, the preacher declares that "a gift destroyeth the heart." Paul, writing to the Philippians, felt it necessary to explain his appreciation for their contributions: "Not because I desire a gift: but I desire fruit that may abound to your account." Now clearly, the stigma on gifts, as indicated by Moses and other Scriptural writers, was really a stigma on the cringing attitude, the sense of limitation and inferiority, which is always fear.

The gift of God is that healing wholeness of spiritual action which takes the place of any sense of inaction or overaction, whether supposedly in body or in business, in the school, or in the household. The divine bounty provides harmony instead of discord, plenty instead of lack, the fullness of joy instead of any mortal craving. The time for enjoying the gift of God is all time, not simply some special season of the year. One rightly appreciates the proof of healing as the greatest gift there ever could be when one understands it as coming from the divine Mind alone. The glad recipient of all divine goodness must be active in the very receiving, in that he must practice energetically in conformity with Principle.

As one comprehends the true idea, even his giving and receiving of presents at the right time and in the right way becomes more spontaneous because of the demonstration of what is nearest right in all circumstances. Those perfunctory gifts which are inspired only by a sense of custom, tradition, or human expectation are necessarily diminished, and the true giving, which actually manifests Principle, is in-To know that the Christ, as spiritual idea, is creased. always present to bless, daily and hourly, is far better than to think of a material form of celebration once a year. As Mrs. Eddy says in "The First Church of Christ, Scientist, and Miscellany" (p. 262), "Christmas to me is the reminder of God's great gift,-His spiritual idea, man and the universe,-a gift which so transcends mortal, material, sensual giving that the merriment, mad ambition, rivalry, and ritual of our common Christmas seem a human mockery in mimicry of the real worship in commemoration of Christ's coming." Only the one, then, who appreciates this true gift, day in and day out, and proves for himself the infinite blessing of the spiritual idea, is the one who, in the words of the proverb, "hateth gifts" because he is turning away from the mortal sense of things to the truth. In this readjustment, he is, of course, losing nothing real but gaining rather the wholeness of genuine satisfaction. GUSTAVUS S. PAINE.

[Written for the Sentinel]

Vision

LENA M. HALL

HEY that be wise shall shine." Shine as the heavens bright; They that shall lead to righteousness As stars diffuse their light. "They that be wise shall shine," God's holy laws reveal: Break for the world His holy bread, Renew its paschal meal.

Oh, in the darkened hours, When the high heavens shall fail, When sun and moon and stars alike Before earth's horrors pale, E'en in the darkened hours Let faith's faint flame be fanned. Fed by the holy prophet's word: "The wise shall understand."

Testimonies of Healing

It would be impossible for me to tell of all the blessings which I have received through Christian Science. Each day brings a new demonstration of the divine ever presence, and human language has no words with which to express the gratitude I feel.

Through the study of the Bible and of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I am learning to know God as Life, Truth, and Love, and to understand the reality of being, which has freed me of many errors of human belief concerning age and infirmities. New energy sprang up in me, my heart has been strengthened, my sight has become normal again, and I can perform my duties without wearing glasses. Memory, which was constantly failing me, the failure of which I had accepted as inevitable on account of the belief of advanced age, has been restored, making it possible for me to study English in order to understand those of Mrs. Eddy's writings which are not yet translated. My daily duties, business transactions, and study,everything, in fact, is so easily accomplished that I do twice as much work, always with joy, and with less fatigue than before. I am convinced that through an earnest and constant study and application of Christian Science we attain to a large degree of spiritual understanding. We know that through this understanding we gain the victory over all errors, however subtle, which try to separate us from divine Principle. Each forward step brings us nearer the divine and inexhaustible source of love,-God.

Another wonderful demonstration,—extraordinary from the human standpoint,—has been witnessed by us lately. My daughter was expecting a baby, and during the months of waiting we continually held to the truth. Thus everything went well until the day of the birth. Then error suddenly tried to make itself seem real in the form of an extremely discordant condition and the life of the mother as well as of the child was in danger. The midwife who was called said: "It is very dangerous and I can do nothing without a specialist. I must telephone for one to come at once." The doctor arrived, diagnosed the case as very serious, and said that my daughter would probably have to be taken to the hospital that evening. As fear seemed to be governing us, we immediately called a faithful friend and practitioner to help us. She did so with untiring love, and remained with us.

Suddenly a very clear remembrance of the ship in the midst of the storm, and of Jesus saying: "Why are ye so fearful? how is it that ye have no faith?" came to me; I took courage, and the whole family held to the truth, working without ceasing, knowing that error could not resist the allpower of divine Love, and the same evening the demonstration was made. It was wonderful, the birth was quick and without any pain, so that the midwife was astounded and the doctor exclaimed, "It is marvelous, it is a miracle." We knew that Love had worked the wonder. The third day all went normally and there was no trace left of that which had tried to frighten us. Since then everything has been well, the little girl is in splendid health and we are all filled with inexpressible gratitude for this demonstration of God's power. We have fully realized these words of Isaiah: "When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee: when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee." We feel profoundly grateful to Mrs. Eddy who through her untiring work of love and consecration of thought to God, revealed to

us the kingdom of heaven within and thus enabled us to realize here and now our freedom from human beliefs, through the understanding of the truth.—(Mrs.) M. Prister-Matthey-Doret, Lausanne, Switzerland.

4

Mere words fail to express the gratitude I owe to Christian Science, which came to me in a time of need. Numerous physicians and specialists, having no success in diagnosing my case, could afford me no relief, and after doing all in their power, suggested a change of climate. I immediately left my home in the northern part of the United States, and divine Love led me into the home of Christian Scientists in the South, and with the help of a loving practitioner and the earnest, constant study of our textbook, "Science and Health with Key to the Scriptures," I began to improve rapidly and in several months' time gained over twenty-five pounds in weight.

When leaving the North, it was necessary for me to leave my two children in the care of my mother, as I was not in a condition to take care of them; in fact, when I left, my family never expected to see me alive again. Owing to this beautiful study, however, I was able to go north in less than nine months' time and take charge of my little family and attend to all household duties, without any ill effects whatsoever. The above has all happened within the past eighteen months and it is needless for me to say that I am deeply grateful for having found "the pearl of great price."

(Mrs.) Fannie Kossis, Oakland, Calif.

4

Before I knew of the teachings of Christian Science my life seemed to consist of unsatisfied longings, disappointed hopes, discontentment, and ill health. An internal complaint which seemed to rob me of any hope of peace brought me to the point where I could see that life, as I then understood it, was indeed "vanity and vexation of spirit." In the dark hours of one night of pain I felt as never before the need of a God I could understand. At that moment I ceased praying for recovery and from the bottom of my heart went the cry: "Create in me a clean heart, O God; and renew a right spirit within me." A few weeks later I was told of Christian Science, and "Science and Health with Key to the Scriptures" was lent to me. Before I had got through that wonderful book I found myself entirely free from the discordant physical condition. Since that time—five and a half years ago-I have been perfectly well and strong and have come to see that physical healing is the smallest part of the redemptive work of Christian Science. The clearer knowledge of God and His changeless creation is the greatest joy of all. It is saving me from the false sense of self and is teaching me to know that man, as the reflection of God, reflects only what God knows.

The constant unfoldment to one's thought of the right idea of everything,—enabling one to see the falsity of the so-called material universe and to perceive the spiritual and perfect universe, the only creation there is,—is surely what Paul referred to when he wrote, "And be not conformed to this world: but be ye transformed by the renewing of your mind." That Christian Science has made this possible, thousands of liberated and grateful people the world over have proved.

(Mrs.) EDITH M. PRETTEJOHN, Birmingham, Eng.

I should like to add my testimony to that of my wife, for the benefits which come into one's life with even a small knowledge of the vast subject of Christian Science are very far-reaching. TE II

It is five and a half years since I first read "Science and Health with Key to the Scriptures" by Mary Baker Eddy, after a great need was met in the healing of my wife. I had some feeling of prejudice against what I imagined Christian Science to be, but decided to read the textbook to see what had brought about so great a change. Whilst reading, a wound in the elbow which had been troublesome for about twelve months entirely disappeared. With these unmistakable proofs of the truth of Christian Science, we began the study which is indeed food and drink to me, and soon the Bible, which had always been obscure, began to stand out in a new light. The ninety-first psalm, understood in the light of Christian Science, enabled me entirely to overcome fear when flying, and upon two occasions I was delivered in a most wonderful way from accidents in the air.

One step in the journey from matter to Spirit for which I am particularly thankful is the unfolding to thought that, as Mrs. Eddy says in Science and Health (p. 514), "the individuality created by God is not carnivorous, as witness the millennial estate pictured by Isaiah:—

The wolf also shall dwell with the lamb, And the leopard shall lie down with the kid; And the calf and the young lion, and the fatling together; And a little child shall lead them."

The abstinence from flesh food has meant much to me in the line of spiritual progress. The unreality of matter was clearly demonstrated a few weeks ago when, whilst reading the report of a Christian Science lecture in the *Monitor*, an enlarged toe joint, which had been very painful as far back as I can remember, completely disappeared, leaving the foot perfectly normal. It would be an utter impossibility to say what Christian Science has been to me in business matters. Step by step I have been led in the right direction when things have seemed uncertain. It has meant continued progress. True are the words contained in one of our hymns (Hymnal, No. 155):—

Thou hast the gift from God-Dominion over all.

ARTHUR ROBERT PRETTEJOHN.

Words cannot express my gratitude for Christian Science. It has been only little more than a year since we turned unreservedly to divine Love for our every need, and since then our blessings have indeed been many. After a winter in which our experiences included whooping cough and mumps, the destruction of our home by fire, and the birth and death of an infant daughter, I was run down mentally as well as physically. In this hopeless condition, and feeling very bitter toward a creator who, I thought, had taken our baby away, as some sort of punishment, I went, only as a last resort, to a Christian Science practitioner. I shall never forget her kind, loving words, as she explained that God is "of purer eyes than to behold evil," and knew nothing of the loss of the baby.

We then asked for help for our young son who had a cough which material remedies had failed to relieve, and in doing so threw out all of our medicine, which was no small amount. The cough was beautifully overcome in a very short time, and since then, through the loving help of a practitioner, fevers, colds, sore throat, rheumatism, and a severe case of ringworm have disappeared into their native nothingness. Our three children are attending a Christian Science Sunday school and are becoming able to meet some

of their seeming claims through their own understanding. For all of these blessings I am truly grateful to God, to Jesus the Way-shower, and to Mrs. Eddy, who has rediscovered this wonderful truth.

(Mrs.) A. L. WILLIAMS, Tacoma, Wash.

4

I have so much to thank Christian Science for that I am happy to give my testimony, in the hope that my experience may offer encouragement to others. I first became interested in 1902, through an instantaneous healing in my family, ailments of thirty years' standing, that had exhausted the skill of eminent physicians, both in this country and abroad, having quickly disappeared. I soon began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, not thinking that I, too, needed physical healing. I was a very nervous woman, and had been for so long a time that I had accepted the condition as perfectly natural. I had suffered from severe headaches, which lasted for many days at a time, and thought that I could not get relief except by using a certain drug, which the doctor had told me affected my heart. I was also subject to bowel trouble, and had been for years, also to frequent colds that lasted for weeks at a time. In a very short time I realized that I had been freed from all these difficulties, solely through the spiritual understanding I had gained in reading the textbook, and it was not long before I found that I could apply Christian Science whenever occasion demanded.

Since then I have had many beautiful proofs of the healing and protecting power of divine Love, as demonstrated in Christian Science. One day, while riding in a street car and turning a sharp corner, I lost my balance and plunged forward against the heavy door frame, and the door closed on four fingers with great force. Two of the fingers seemed pretty badly injured. As soon as I reached my destination I telephoned to a practitioner for help, and the suffering ceased in a very short time. I am especially happy to be able to say that my nails are perfect, although some friends predicted that they would be deformed. On another occasion I held both hands under a hot water faucet, thinking it was the cold water faucet. The water was extremely hot, and the burn seemed severe, but through the application of Christian Science the pain disappeared in a few minutes, and there was not even a sign of redness left. About ten years ago I had a very aggravated case of bronchitis, accompanied by a very severe cough which had lasted for about a year. I am happy to say that one day I suddenly realized that it had passed into its native nothingness. I have not taken any kind of medicine during the last eighteen years, and have never been in more vigorous health than throughout this period.

I am profoundly thankful for our literature. I look forward to receiving *The Christian Science Monitor*, the *Sentinel* and the *Journal*. I do not know what I would do without them, for I consider them a daily need. I am indeed grateful to God, and to our beloved Leader, Mrs. Eddy, for all the good that has come to me and mine through Christian Science.—(Mrs.) SOPHIE NEWMARK, Boston, Mass.

In thinking over the many blessings received through Christian Science during the past fifteen years, it came to me that I had been very negligent in not telling others something about them through our periodicals. I could fill a volume telling of diseases healed, sin overcome, sorrow changed to happiness and peace. I will give one recent healing. In December, 1915, while stopping with friends, I was taken

suddenly ill with pneumonia. My friends are not Christian Scientists and were inclined to be skeptical and fearful. The neighbors when they heard me coughing warned them that they ought to get a doctor, but they very kindly refrained from interfering and telephoned a practitioner each day for me. I remember very little about the first few days, but this I do know—that I was able to care for myself almost entirely from the first and suffered very little. Suddenly the stupor left me and I grew better very rapidly, and in less than three weeks carried a heavy satchel over three blocks to the street car, and the next day walked nine blocks. A former experience with this disease under materia medica resulted in six weeks of severe illness, and many more before strength was restored. How could I be otherwise than grateful for Christian Science, to all earnest loyal workers, and to Mary Baker Eddy, who through her unswerving fidelity to God was able to give Christian Science to suffering humanity?

(Miss) Anna S. Rogers, Los Angeles, Calif.

4

My first experience in Christian Science was the healing of a nervous breakdown, which had come on when I was in my third year in high school. My school work was very dear to me and I feared that I could not complete it. After dragging through six months of torture, a member of my family asked me to read the textbook of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I read the first twelve pages, and never before had I found anything so logical that bore the name "Christian." In two weeks' time I was completely healed through reading the book, and was able to continue my high school course. When I read the following sentences on page 3 of Science and Health I understood why my prayers had never been answered: "Who would stand before a blackboard, and pray the principle of mathematics to solve the problem? The rule is already established, and it is our task to work out the solution." Those were wonderful words to me. It meant that God's work was done. All I had to do was to prove it.

Three years from this time my mother passed away, and this was a source of great grief to us; but through the help of God and my understanding of the Christ-science I was able to help the other members of my family and to strengthen my younger sister who was just coming into the study of the truth. Over and over again this sentence from Science and Health (p. 428) came to my thought: "Life is real, and death is the illusion." This experience occurred in the spring of the year, and everywhere there was evidence of life, even in the material world; and through these symbols I realized how impossible it was for the idea "mother" to be separated from Life.

Since this time I have had many proofs of the power of Christian Science, including protection when in danger and during contagion, and have seen members of my family helped in sickness and in trouble. For all of these and many other precious experiences, I am very grateful to God and to Mrs. Eddy, who was pure enough to be able to present this truth to the world.—(Miss) Helen T. Doan, Chicago, Ill.

4

I wish to express my gratitude for the many blessings which the understanding of Christian Science has brought to me and my family. We have had many beautiful healings, some of which were of colds, coughs, and influenza. All were quickly healed, sometimes with the help of a practitioner, and often through our own understanding of the truth. We have also found that God's law is available in

time of lack and financial difficulties, and have experienced immediate results when we turned to God, trusting wholly in His guidance.

I can sincerely say that the greatest blessing of all is the perfect peace that has come to us through the study of all of Mrs. Eddy's writings. I am grateful for the light which they have brought to bear upon the study of the Bible.—(Mrs.) Leota Logan, Scofield, Utah.

4

It is with a deep sense of gratitude that I give this testimony, trusting that it may be the means of helping others afflicted in like manner, or otherwise, and that it may be a light in the darkness through which mortal man gropes his way in search of health.

About one year ago I was taken with a severe trouble which kept gradually getting worse. I was treated and advised by five different physicians, who in the end told me they could do nothing for me, but advised me to consult a good surgeon. Acting on their suggestion I consulted an eminent surgeon, who diagnosed my case as cancer, and gave me the very gratifying information that I would die, and that soon. However, he said I had one chance in a hundred to live and that was by undergoing an operation, to which I would not consent.

After all hope of material aid had vanished, I was induced to consult a Christian Science practitioner, with the result that to-day I am healed of this and other ailments of years' standing. I am very thankful to God, and deeply grateful to the loving practitioner through whose prayers I was healed. I am also grateful for the correct understanding of God, and His promises, as revealed through Christian Science. The Bible is a new book to me. I now see what Jesus meant when he said, "Come unto me, all ye that labour and are heavy laden, and I will give you rest."

W. S. EBY, Piqua, Ohio.

For some time I have wanted to send in a testimony to what Christian Science has done for me, and to express, through the *Christian Science Sentinel*, my gratitude for the wonderful blessing which the truth as found in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, has brought into my experience.

When I took up the study of Christian Science, about six years ago, it was not for physical healing, but rather that I might recommend it to some one very near and dear who seemed much in need of something radically different from the medical practice and theology of the times. I was much in need of physical healing myself, however, for I was a nervous wreck, relying largely upon will power. As a teacher in the public schools I had taken up the study of psychology as well as some of the so-called mental theories of the day. That these theories are founded upon a material basis I soon learned through the study of the Christian Science textbook.

I was suffering from rheumatism, chronic bronchitis, constipation, liver and bladder trouble, as well as from indigestion, when I turned to Christian Science. As I read and reread this wonderful book, Science and Health, there dawned upon me the certainty that therein was set forth the truth, and I rejoiced that I had found it. Discouraging and disheartening beliefs about God and man gave way to the truth as exemplified in the life of Christ Jesus. All the physical troubles disappeared and with them went the need for glasses. I am now a well, strong woman. The healing was

slow but for this I am indeed grateful, for with it came understanding.

Ever since babyhood I had suffered from a double hip joint which gave me much trouble and pain. The limb had gradually grown almost helpless and I was not able to put my weight upon it at all. There was a difference of about six inches in the length of my limbs and I had to wear an extension shoe. I also had curvature of the spine. Walking to any great extent was very difficult. I had spent much money and time on osteopathic treatments and on massage but with no noticeable results. Through the study of Christian Science these conditions have all been changed. My limbs are practically the same length, the spine is perfectly straight, and my limb is normal, giving me no pain or discomfort in any way. I am deeply and sincerely grateful for the physical healing but I am still more grateful for the mental awakening and spiritual growth which have come, for I was indeed asleep in material beliefs. Our entire family, with one exception, has turned to Christian Science, and the one for whom the first effort was made has become an earpest and faithful student. I am grateful, too, for church membership in both a branch church and in The Mother Church, and for class instruction.

This testimony is sent with the earnest desire that some one may find in these experiences hope and courage to seek through Christian Science the way to health—wholeness, to God, to Truth, Life, and Love. It is also sincerely hoped that some weary and discouraged public school-teacher may turn to this wonderful textbook of metaphysics, laying aside the philosophies and mental theories based upon the belief of mind in matter, for the great truth that God, good, is the only Mind.—(Miss) IDA M. TIBBETTS, Kewanee, Ill.

It has been some twelve years since I became interested in Christian Science. I have had many healings since that time, for which I am truly grateful. In fact, all I have and am I owe to Christian Science.

When a lad of fifteen I united with a denominational church. Its teachings did not satisfy me and later in life I abandoned religion and decided to have a good time. But I saw that my experience in having a good time, with God, or good, left out of the proposition, would result sooner or later in disaster and sorrow. In my case a disease developed which doctors told me was incurable. I employed several of the best physicians in the city where I then lived, only to be told in the end that they could not do anything for me. I said to the doctor one day, "If medicine won't cure me I will try Christian Science." His reply was not encouraging. In a few days, however, I was able to visit a Christian Science practitioner. She gave me a treatment and I returned to my hotel apparently in worse condition than when I left it. I was in hell all that day, and about three o'clock the next morning I asked my attendant to call the practitioner and tell her of my condition. She did so, and the practitioner said she would give me an absent treatment immediately. In fifteen minutes I was asleep, and in the morning I knew I was healed. I gained twenty pounds in about thirty days. I surely have reason to be thankful for Christian Science.

One afternoon, some six months ago, I sprained my ankle. I was alone at the time and had no telephone or near neighbor to apply to for help. The ankle was badly swollen and very painful. I read "Science and Health with Key to the Scriptures" by Mary Baker Eddy, for an hour, and then turned my thought to the realization of the

truth as taught in Christian Science. About six o'clock the pain left me; in the morning the ankle was normal and I could walk as usual. This was rather a welcome experience compared with former ones, when I depended on material remedies, which meant a week in bed and at least a week on crutches

A short time ago I was riding a horse over a rough trail on a foothill ranch, when all at once the horse became unmanageable and began bucking. I was thrown over his head and struck on the hard ground. I was badly hurt, and the pain in my chest and back was intense. When I did not return to the house a man came in search of me. A Christian Science practitioner gave me one treatment and soon afterwards I felt something give way or go into place and the pain was greatly relieved so that I was able to ride home in an automobile. I think this was a wonderful demonstration. I write this testimony in the hope that some one may be encouraged, as I was, to try Christian Science.

W. L. Carter, Corcoran, Calif.

٠

Trusting that it may help another, and with thanksgiving, I write my first experience in healing through Christian Science. I was reading Science and Health, and although I did not then understand it God seemed more real to me. My first visit to a Christian Science practitioner was a brief one, but I came away with one clear impression, that if I were in trouble Christian Science could help me. I told my husband of the visit and how strongly I was impressed. Suddenly one afternoon a few weeks later I was seized with very great pain, the worst I have ever experi-Though various remedies were tried they gave but little relief, and a doctor who was called in that evening said I had appendicitis. Arrangements were made at once for my removal to a private hospital near by, to be ready for an operation in the early morning. When in the depths of fear and anxiety, I remembered the Christian Science practitioner, and asked my husband, as he was leaving the hospital, to ring her up and ask for help as soon as he reached home, which he did. Within an hour I was free from pain, and was so normal before morning that the operation did not take place. In a day or two I was home again and have had no return of the trouble. This healing took place over six years ago. It was wonderful to me, but the great sense of peace and rest that came to me was more wonderful.

Later I was greatly helped when a baby was expected. The doctor gave me no hope that I could carry it even for the first three months. One night when it seemed all he said was true, and I was trembling with fear, the sweet message came: "Perfect love casteth out fear." It brought peace and healing and, with help from a practitioner, in a few weeks I was busy doing house and home duties again with very little assistance. At the right time a little girl was born, the birth being very quick, natural and without any pain. As I look back I feel I have received blessings far beyond my understanding, and such a message as the above stands out as a beacon light.

My husband enlisted and was away for the last two years of the war. During this time supply was demonstrated and various difficulties were met with loving help. I am very grateful for all the help that has been so generously given and feel deep gratitude and reverence to Mrs. Eddy for her great life work, and for the textbook, "Science and Health with Key to the Scriptures."

(Mrs.) BEATRICE V. PERRY, Sydney, Australia.

Signs of the Times

["Gratitude"-The Christian Science Monitor, Boston, U.S.A., Nov. 4, 1920]

Students of Christian Science finding joy in the proof which Christian Science gives of the fact that good is the natural and inherent right of man, may well pause to remind themselves of the importance of gratitude as a large factor in their growth spiritward. A constant state of gratitude is a consistent declaration of the omnipotence and omnipresence of divine Mind and its ever governing activity.

When a problem presents itself to be solved, one is prone to open the door to suggestions of discouragement and ask, "Why should I have this to meet?" The correct mental attitude with which to undertake the solution of the problem would be one of joy that there is an opportunity to prove God's power, and the understanding of divine Principle, to conquer every suggestion of evil. ceptance of the argument of discouragement is a virtual admission of the false suggestion that Mind is powerless to help. When Jesus was confronted with the problem of raising Lazarus from the dead, he did not waste time in wondering why he had this work to do, nor did he wait until Lazarus had come forth before expressing gratitude. His first step was one of thankfulness which he expressed by saying, "Father, I thank thee that thou hast heard me." Then it was that his recognition of the deathless law of Life freed Lazarus.

Back of the thoughts of ingratitude, one will always find fear lurking. Is it not fear that something is to be taken from us, or that some evil is about to befall us? Perhaps there is the suggestion that some one is usurping our place or position. If God is Principle, nothing can be taken from us. We would never fear that we could be deprived of the multiplication table. Why? Because we know it. Likewise if we know substance to be spiritual we can never doubt for a moment that our every need is supplied. It is not so desirable to have a large bank account as to have a right mental attitude. Adverse financial conditions might sweep away in a night the material gains which one has struggled for years to acquire, while with a knowledge of Principle we can demonstrate the power of Mind to supply every human need. Jesus did not have an accumulation of material wealth, or possessions, yet there never lived a richer man. When a material need presented itself, he had only to exercise his knowledge of divine Mind to supply the demand, as when he turned the water into wine, when he fed the multitudes, and when he took the money out of the fish's mouth.

Gratitude cannot exist in one's heart at the same time with hatred or condemnation. The one must necessarily preclude the other. Gratitude is an acknowledgment of Mind's ever present love and protection, while a mental state of hatred or condemnation is a denial of Mind and of man as the complete manifestation of Mind. The latter tends toward death instead of life. Mrs. Eddy expresses it thus (Miscellaneous Writings, p. 11): "I would enjoy taking by the hand all who love me not, and saying to them, 'I love you, and would not knowingly harm you.' Because I thus feel, I say to others: Hate no one; for hatred is a plague-spot that spreads its virus and kills at last. If indulged, it masters us; brings suffering upon suffering to its possessor, throughout time and beyond the grave. If you have been badly wronged, forgive and forget: God will recompense this wrong, and punish, more severely than you could, him who has striven to injure you. Never return evil for evil; and, above all, do not fancy that you have been wronged when you have not been."

As students of Christian Science, do we not often forget to be grateful for the benefits received? Do we not complain because a neighbor seems to have more than we? Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 3): "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more. Gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech." It is not enough to express gratitude outwardly; we must live it and let our lives witness to our sincerity.

There is a tendency in the human mind to blame others when conditions go wrong. One is disposed to say, or think, "If some one else had done differently, I would not have had this trouble." The true metaphysician knows that there is no justification for this mental attitude, because he knows that it is the privilege of each one to demonstrate his uninterrupted, inalienable relationship with his divine Principle, God. He then wastes no time in condemning others, but begins immediately to examine his own consciousness to find the cause. He knows that his world is just what his concept of it is. If he constantly insists on seeing man as God sees him he will then reap the benefit of this righteous thinking. On the other hand, if he entertains thoughts of poverty, limitation, self-pity, or fear, his life will manifest inharmonious conditions. Christian Scientist also knows that if he admits any consciousness of sickness, his body will express discord. Then does it not behoove us to begin now to awaken from the dream which the carnal mind would impose upon us, and to exclude all beliefs of evil, whether they be envy, jealousy, hatred, malice, revenge, sin, sickness, or death?

In Isaiah we read, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." What greater benefit can we ask? The gift is ours and we have only to accept and be grateful for what the hand of Love offers us. We have only to purify our daily thinking and living, in order to inherit our God-given freedom from want, woe, sickness, sin, and death.

[Fewer Physicians Prescribing Whisky]

Dr. C. R. O'Connor, Federal Director of Prohibition for New York, announced on November 10 that only 340 out of more than 3700 physicians holding licenses to prescribe whisky have applied for renewal of their permits, although two months have elapsed since this privilege of renewal was granted. Physicians are finding other medicines more effective and satisfactory than liquor, he said.

[From the London (England) Sunday Evening Telegram]

One of the subjects dealt with by the recent Lambeth Conference was Christian Science, and in his morning address at St. Martin-in-the-Fields, Trafalgar Square, the Reverend H. W. Blackburne, D.S.O., M.C., directed attention to its report on this question. Christian Science, he pointed out, hails from America, and it owes its origin to Mrs. Eddy, whose "Science and Health with Key to the Scriptures" may be taken as the authoritative statement of the teachings of that church. It is surely right that we should always try and see what is good in other religions, especially those that owe allegiance in some shape or form to Christ Jesus. On that basis let us thankfully acknowledge the support given by the Christian Scientists against any ideas of materialism.

Then let us be very thankful for the emphasis that they lay on the fact that God is Love, and that nothing contrary to the spirit of Love can ever be attributed to the Almighty.

Then we must also be thankful for the stress which Christian Scientists place on the supremacy of the Spirit and Mind over the body, and also for the emphasis that they lay upon faith. All this is part of our own religion, but we have allowed it to die out. Christian Scientists are missionaries for their cause, and in this respect we have something to learn from them.

[From "Miracle and Prophecy" by the Late Reverend W. F. Adeney, D.D., in The Hibbert Journal]

The popular prophet is a person who foretells the future. But even in the form of the utterances only a small fraction of Hebrew prophecy is expressed in the future tense. Most of it is concerned with present affairs, and its greatest productions set forth eternal truths, truth independent of time. The prophets tear up the veil of hypocrisy and shatter the fabric of self-delusion, making a terrible exposure of the condition of their contemporary world, with penetrating insight into human nature. This gives a prophecy the value of an articulate conscience. But the prophets do not stay with mere exposure and denunciation. Speaking in the name of Jehovah, they declare the counsels of God as these are revealed to them; in other words, they have inspired visions of spiritual truth.

[From "Preaching and Paganism"—by Albert Parker Fitch]

In such days, our chief gift to the world cannot be the support of any particular reforms or the alliance with any immediate ethical or economic movement. For these things at best would be merely the effects of religion. And it is not religion in its relations, nor even in its expression in character—it is the thing itself that this age most needs. What men are chiefly asking of life at this moment is not, What ought we to do? but the deeper question, What is there we can believe? For they know that the answer to this question would show us what we ought to do. . . . This generation is hungry for understanding; it perishes for lack of knowledge. . . .

We have a new and most detestable cant; some one has justly said that the natural man in us has been masquerading as the spiritual man by endlessly prating of "courage," "patriotism"—what crimes have been committed in its name!—"development of backward people," "brotherhood of man," "service of those less fortunate than ourselves," "natural ethical idealism," "the common destinies of nations"—and now he rises up and glares at us with stained ingers and bloodshot eyes. . . . Has not the time arrived when, if we are to find ourselves again in the world, we should ask, What is this religion in which we believe? What is the real nature of its remedies? Do we dare define it? And, if we do, would we dare to assert it, come out from the world and live for it, in the midst of the paganism of the moment? . . .

The mainspring of human activity, the creative impulse from which in devious ways all the thousand-hued motives of our lives arise, is revealed in the ancient cry, "My soul thirsteth for God, for the living God." That unquenched thirst for Him underlies all human life, as the solemn stillness of the ocean underlies the restless upper waves. The dynamic of the world is the sense of the divine reality. . . . The cry, not of pride in self, but for fellowship with the infinite, is the superlative expression of man. . . .

Out of the extremity and definiteness of our need we

know that He must be and we know what He must be like. He is the One to whom all hearts are open, all desires known, from whom no secrets are hid. Who could state the mingling of desire and dread with which men strive after, and hide from, such a God? We want Him; yet until we have Him, how we fear Him. For that inclusive knowledge of us which is God, if only we can bear to come to it, endows us with freedom. For then all the barriers are down, there is nothing to conceal, nothing to explain, nothing to hold back. Then reality and appearance coincide, character and condition correspond. I am what I am before Him. . . .

The partial notion of God which our age has unconsciously made the substitute for a comprehensive understanding of Him is essentially to blame. . . . Has not the trouble with most of our political and moral reform been that we have had a passion for it but very little science of it?

True F. J. J. J. William (Durlant Miner)

["Pool in Churches"-From West End Advertiser (Duluth, Minn.)] At the Michigan Sunday school convention, held a few days ago, the president of the North Dakota School of Science advised the installation in churches of pool tables, to stimulate church attendance. We are not sermonizers, nor preachers; but we cannot help using this item as a basis of some reflection. If this idea were carried out, and if the Master from Galilee were again on earth, he would repeat the performance with the pool installers and the church pool players that he did with the venders and money changers in the temple. For it all amounts to the same thing. There is already too much pool-playing thought, too much materialistic thought, in the churches to-day. And that accounts for the For the people seek spirituality in the vacant news. churches, spirituality in religion, and they do not so often find it. This statement may grate on some people, it may "go against the grain" of others-it may be hard to see it or admit it, but it is nevertheless true.

What the churches need is not pool tables, not more materialism. They have too much of materialism already. They need only to preach more of the religion of the great Master, they need only practice more of the precepts of the Man from Galilee, and the churches will be full. They need to preach more about love, and less about damnation; more about joy, less about sorrow; more about health, less about sickness; more about life, less about death. And they need to put into effect, or try to put into effect, some of these things in daily life.

The Master and great Practitioner said, "He that believeth on me, the works that I do shall he do also." We may not be able to do and perform as well as the Master did. But we shall do and perform according to the measure with which we try. "By their fruits ye shall know them." And we shall need no pool in our churches.

[The Answer of Christian Science]

In an article entitled "Can Our Civilization Maintain Itself?" in a recent number of *The Atlantic Monthly*, the writer, Cornelia James Cannon, propounds some questions which current conditions must have forced most thoughtful people to consider, and it is comforting to know that through Christian Science they can be answered. She asks:—

"Is it inevitable that we cannot all be healthy and happy and intelligent? The economist will try to comfort us with the stabilizing effect of hard times on an under-supplied labor market, the saving quality of the psychology of content, the possibilities of substituting machinery for men, the equivalent of twenty slaves of old which coal and water power have

put at the service of every human being; but what can plain people like ourselves conclude, except that we are drifting rudderless, going nowhere, and with scant facilities even for getting there? Our complex civilization cannot be kept up apparently for all alike, even at its present not exceptional standard, by the individuals who comprise membership. Shall its benefits be confined to one class of the population? Can we recruit our economic slaves from some of the less advanced races, or must we make some fundamental change in our standards? The luxuries of one generation can no longer axiomatically become the necessities of the next. So far, at least we can see. But is not something much more fundamental essential? Can we as a nation renounce the habit of material possession, which is becoming an obsession with us, and do it with the conviction that it is incompatible with the practice of democracy? Or must the horrid struggle of those who have not, to get, and of those who have, to keep, go on forever?"

Only in a correct understanding or knowledge of God is to be found the satisfying answer to all of these questions. This understanding is that "something much more fundamental" which this writer rightly feels is essential. To the degree that they have gained it, students of Christian Science have been able actually to prove that man must inevitably be happy, healthy, and intelligent, and that the "horrid struggle" to get and keep is not inevitable but is already ceasing where true substance is becoming better understood.

[Major-General Sir Frederick Maurice in The Pilgrim]

If we really believe in the teachings of our Master, if we have the courage to act in accordance with his teaching, and the faith that, if we do what conscience tells us to be right, all those things of which we have need will be added unto us, then our way is clear. Statesmen are telling us that we must learn to think internationally, that we should worry less about our own particular to-morrow and more about the to-morrow of others. It does not often happen that the call of the statesmen is in agreement with the call of Christianity, and surely Christians should rejoice in the fact and welcome the opportunity.

[From a Letter in Billings (Mont.) Gazette]

You and thousands of others have puzzled your brain, perhaps, by wondering what you were punished for. You look to the clouds and demand of heaven, or some one somewhere, why all this misery has been visited upon you. Punishment is not visited upon any one at any time by any one except that person himself. Punishment is the result of wrong thinking in the first place. Instead of wondering what we have done to catch cold, for instance, we should devote our attention to not catching another. The way to avoid punishment for anything is to obey the law, which is so simple we overlook it. The entire law of human conduct is written in two short lines: Thou shalt love thy creator above all else and thy neighbor as thyself. If you really want to stop the sin, sorrow, and sickness that punish you, look to the law and see if you have placed money or your own will ahead of anything else. These are days when it is necessary to do a lot of real thinking.

[British Labor Leader on Need for Thinking-in The Christian Science Monitor]

Everything to-day is in a state of flux, politically, economically, and, some insist, in the way of religion. Anyway this is the opinion of a member of Parliament for a mining constituency near Durham, England. Certainly many people

will agree that the old order of things has well-nigh passed away and that the new era has not yet dawned. The great trouble, Mr. — thinks, is that people have got away from the habit of thinking, and he blames the universities for giving a great deal of information but not telling the whys and wherefores, never bringing out what is in the people. Had they done so, he considers that it would have been impossible for the leaders to have plunged the peoples into war with each other, and that it is only by the common people grouping together that a still greater war than the past one can be prevented. If this is so, the sooner people begin doing some good hard thinking for themselves the better.

[From The Pioneer, Toronto, Ontario, Canada]

The Pioneer sees in the British Columbia result a call to increased activity in the temperance ranks in Canada from coast to coast. It sees also that the most dangerous step that the prohibitionists can take is to compromise in the least degree, or to deviate to the slightest extent from the straight road to real, unconditional prohibition. The British Columbia vote gives a warning that ought to be promptly heeded. . . .

It is worthy of note that the liquor interests have always adroitly sought to defeat each more advanced proposition by becoming for the time being advocates of the next best. When local option was the issue they were for well regulated licenses; when provincial prohibition was talked, then they urged that local option was the proper solution. Now when we are grappling with the liquor traffic from the Dominion standpoint, the liquor interests think that the whole matter should be left to the Provinces.

With true prohibitionists, however, license reduction, local option, provincial prohibition, have never been looked upon as a solution, but only as a method to secure our ultimate purpose—complete, total, national prohibition; all through our local option campaigns it was stated emphatically that local option was not a solution, but a means toward an end. To-day, it is recognized by thoughtful reformers that provincial prohibition cannot be a solution, but is simply a method by which we may reach more quickly the goal of national prohibition. Do not let us be fooled or turned aside by the specious cry of provincial rights which will be increasingly used as the Dominion campaign waxes stronger. Let us recognize that national progress and honor demand a nation-wide law.

[From "The Conquest of Fear," in The Congregationalist and Advance]

Face fear as a master faces a useful servant and it cringes before you. Face fear as its slave and lo, you feel its stinging master's whip across your shoulders. Now fear, like all bullies, is a coward. There are three things of which fear is desperately afraid.

Fear fears light. Thousands of people have gone through life tortured by the certainty that they were suffering from some terrible and incurable heart disease. They felt that their lives must be short, that they might drop dead at any moment. Their whole existence was spent under the shadow of that fear. . . . But fear kept them from ever dragging their fear out into the light. They knew in the back of their minds that they had heart disease, but did not dare to face a terrible certainty about it. So they lived all their lives subject to an unreal fear. Most fears are dispelled by being dragged out of their corners and looked at in the light. The worst evil is not so bad as the fear of that evil. The fear of being out of style, the fear of doing the wrong

thing, the fear that one shall not be able to make good in business, the fear that one is slipping and not so efficient as formerly, the fear that one may die and leave one's family uncared for, the fear that an odd mood may presage insanity—most of these fears would fade into thin air in the light of day. But they are our masters so long as they are permitted to rule in the dark back corners of our consciousness.

Fear fears courage. It is only at the crossroads that fear sits where the traveler hesitates and doubts; on the highway it has no power. "Stretch forth thy hand!" "Sell all thou hast." "Take up thy bed"—all are acts of courage. Is your life halted by a terrible bogey that straddles quite across the way? Dare to go forward; it is only paint and pasteboard.

Fear fears company. Under the juniper tree you are alone and therefore afraid. But when you know there are ten thousand with you, you are a hero. He who fights for right is always one of an innumerable company. The Great Spirit in the hearts of all good men is with you. The company of the hand means much. But the company of the heart means more. The heart that has God as guest has no fear.

[Introduction to a Christian Science Lecture in Bridgeport, Connecticut]

Probably the foremost desire of mankind to-day is to be rid of sin and disease. The struggle to this end is so important that several professions are devoted entirely to this purpose. All of the physicians and nurses devote their entire lives to combating disease, and a large part of the work of the druggist is devoted to this end. Then we have the hospitals and asylums—and each year apparently more of them-all devoted to the alleviation of the sicknesses and diseases of humanity. The ministers and the large class of social workers, in their turn, fight bravely against sin. The charitable societies, the Y. M. C. A.'s, and such kindred organizations, all take their positions in line in the constant struggle against sin. Again, we have the prisons, the police forces, and the great mass of work done by the courts and the lawyers, all toward this suppression of crime. Has it ever occurred to you how great are these burdens upon the shoulders of humanity?

It may be said, in humility and with gratitude, that the students of Christian Science to-day are leading their lives in comparative freedom from both sin and disease. These results from Christian Science are becoming more generally recognized even by those who do not understand its teachings. The Bible contains many promises that mankind shall be free from sin and disease. Christ Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Christian Science raises mankind away from the objects of material sense into the realities of Spirit. It works only with spiritual truths, and it always works to prove that God is "a very present help in trouble."

[From "Science and Religion"-by John Merle Coulter in The Biblical World]

One of the great contributions of science has been to develop the type of mind that has been able to disentangle essential religion from dogmatic theology; to separate the things we know from the things we infer. It has always seemed to me that the most conspicuous illustration of this process is to be obtained from the teachings of Jesus. He has always impressed me as being thoroughly scientific in his whole attitude toward religious questions. In fact, it is the attitude of Jesus that has attracted the loyalty of scien-

tific men to Christianity. He was the embodiment of religion, but no one thinks of him as a dogmatic theologian. He was surrounded by a nation of such theologians, whose speculations had woven about the great fundamental truths of the Hebrew religion such a meshwork of speculation that they had become completely concealed. Every utterance of his pierced through the meshwork and revealed essential religion; and he left it completely uncovered for us, more attractive than it had ever been. But a philosophical age soon began to weave about it again a new mesh of speculation, and often it has been nearly if not quite concealed. What has been called the emancipation of thought, however, which is simply the scientific attitude of mind, is bringing it to light again, insisting that the mission of theology is not to obscure religion, but to keep it in plain sight. . . .

This makes it all the more important to realize the fact that the association of reason and religion is not only possible, but that the founder of Christianity insisted that reason is an essential constituent of religion. This means that religion cannot contain anything that reason rejects; that all the triumphs of reason must ever be consistent with religion; and that loyal affection and a trained mind are helpmeets in the progress of religion. . . .

It is the search for imaginary hidden things that has caused most people to miss the obvious things. A great teacher is always clear, and it seems absurd to think of Jesus as talking like the Delphic oracle. He meant just what he said; and as he was giving directions for the actions of people, he had to speak with no ambiguous meaning. . . .

The problem of religion is to develop effective men and an effective social order. This is certainly the work to which Jesus addressed himself. To help in the accomplishment of this end, clear and definite statements have been formulated for the instruction of men. In the childhood of the race, these statements took the form of commands; but with growth in knowledge and increase in experience, the tone of command changes to something much more binding. It is recognized that these statements are statements of truth. The child has grown to an understanding of the wisdom of the command, and blind obedience passes into appreciative obedience; and the authority recognized is not the authority of power, but the far greater authority of truth.

[Dr. Deets Pickett as Quoted in The Pioneer]

The course of prohibition enforcement has followed practically the same line in every state where prohibition has become the law. It is following the same line of development in the nation as a whole. When the law first goes into effect its results are almost miraculous. The traffic in liquors ceases, the habitual drinkers accept the discussion as concluded, peace and prosperity descend upon the community like a shower of blessings. The indicator of drunkenness, pauperism, crime, and delinquency descends with a rush.

In a few months a second phase appears. Prominent men, misreading public sentiment, say things and do things which seem to indicate that the fight for alcohol is not hopeless and that the law may be overthrown or emasculated. The exsaloon keeper takes courage, the appetite of the habitual drinker is reawakened by the suggestion, the ward heeler and corrupt politician breathe again with the hope that the saloon will yet return as a center of corrupt politics, a medium of "reaching the boys" who can be reached by reprehensible methods. News of the slightest violation of the law, tricked out in spectacular writing, appears with great frequency in a large section of the press, while news of the splendid effects of prohibition is given no publicity. Antisocial individuals and

groups begin to find faulty spots in the law and faulty spots in the enforcement of the law. Inexperienced officers begin to disclose their weakness; judges who have not previously had to deal with offenders against prohibition inflict fines of ten dollars and similar absurd penalties.

As a direct consequence the indicator of alcoholism and its attendant evils begins to rise. It never reaches its former high point. Prohibition at its worst is much better than license at its best. But still, as this second phase reaches its culmination, the affair becomes semi-scandalous.

Then the people awaken. They turn with fierce resentment upon every candidate for office who breathes the least hostility to the prohibition law. Judges, learning that bootleggers are inevitably the worst criminals, begin to inflict severe penalties. Juries convict regularly, when conviction is justified. Legislative bodies amend the law so as to eliminate "holes." Enforcement organizations, finding themselves upon the defensive, throw leniency to the winds and act with vigor. The people once more demonstrate that there is no such thing as extra-territoriality for any trade in America, that the popular will is irresistible and will crush anything in its path. Once again the indicator of alcoholism sinks rapidly to a low point, where it remains with monotonous consistency during the years and decades to follow.

Church Notices

* * *

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Teners.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. One such letter follows:

FEEL especially grateful for the help which The Christian Science MONITOR has given me in times of need. Some time ago I had great difficulty in dismissing the belief that I had had influenza, and in getting around as readily as I should. At this time I was called away on a business trip, covering a period of about three weeks, and one day while in a Christian Science reading room I bought a copy of the Monitor. After reading it practically from cover to cover I felt very much better. So each day, as I went from place to place, I bought a copy of the Monitor. It seemed to me that for the first time I had seen a practical application of Christian Science to our daily problems. It told of such serious incidents as national railroad strikes in France, of uprisings in Italy, of riots in Ireland, of Turkish trickery in the Near East, and of similar troubles throughout the world, yet without giving the hopeless sense of turmoil which I had previously gained from the same news in other papers. gained a sense of rest and quiet, and a realization that the solution for all these apparent problems is in Mind, in the leavening work of Truth, in the clear, honest thinking of which the Monitor itself is an example. Clear, crisp news, quiet articles, powerful editorials, always speaking the truth, and the metaphysical article on the Home Forum Page all combined to lead my thought in the right direction and so leave behind all thoughts of "after effects of influenza."

For this, I have always been especially grateful to the Monitor, and to-day I read and study it almost as regularly as I do the weekly Lesson-Sermon.

paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German.
Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.07; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, clucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers. 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

NUMBER 17

Water and Spirit

FRANK H. SPRAGUE

In the remarkable colloquy between Jesus and Nicodemus, detailed in the third chapter of John's gospel, the Master goes to the very heart of the problem of being and draws with unerring accuracy the line of demarcation between the real—the spiritual—creation and the fictitious claim of a universe evolving on an unspiritual basis. Unfortunately, however, the synthetic gospel has suffered more, if anything, than other books in the Bible at the hand of the authorized translators, since it deals in the most precise terms with metaphysical distinctions quite beyond the grasp of scholastic theology. And because of this inadequacy, the force of the logic with which the Master cuts away the ground from under the Pharisee's attempt to controvert spiritual truth with materialistic reasoning is obscured, to a considerable extent, in the English version of the night-time interview.

On the strength of his visitor's tribute to him, "Rabbi, we know that thou art a teacher come from God," Jesus broaches the subject by launching out at once beyond the depth of the apologist for a physical theory of creation, with the sweeping declaration, "Except a man [the word thus translated is the indefinite pronoun which signifies "one"] be born again [more properly "from above"], he cannot see the kingdom of God;" thereby implying that the truth of being can only be discerned from a more spiritual standpoint than that which testifies to fleshly existence. Whereupon Nicodemus, seeking to justify the concept of man as a fleshly personality, artfully retorts, "How can a man [the Greek word signifies a mortal or individual of the human species, and is not that which occurs in the previous sentence] be born when he is old?" Since the "old man," begotten of the lust of the flesh, cannot be born from above, but must be "put off" in the rebirth or awakening to spiritual being, Jesus passes over his interrogator's evident attempt to beg the question and restates his original position (here, as in the first place, the indefinite pronoun is used), going a step further in elucidating the spiritual standpoint: "Except [one] be born of water and of the Spirit, he cannot enter into the kingdom of God." In the former affirmation it was merely the question of recognizing the truth that was considered; in this supplementary explanation it is the more practical issue of demonstrating the truth, of entering into a realization of man's spiritual estate.

Following his customary method of illustrating spiritual verities by object lessons at hand, the Master avers, it would seem, that human consciousness must undergo a radical change of base before it can come into harmony with spiritual reality. And here again the translation misses the mark; for in order to complete the analogy as it is in the original, the wording would have to read literally, "water and air," instead of "water and of the Spirit." Water, the most familiar form of matter in the liquid state, and air, the most widely diffused

form in the gaseous state, suggest lesser degrees of density, resistance, obstructiveness, inertia—propensities of the carnal mind particularly exaggerated in the pharisaical temper—than does matter in the solid state. May not there indeed be a better reason than is sometimes suspected for the closeness of the analogy; for what, after all, is the phenomenon "matter" but the externalized manifestation of the self-same qualities and characteristics which are unveiled within the thought realm in mental concepts and tendencies? How well do the determinations of present day physics seem to bear out, in this respect, the conclusion stated long ago by Mrs. Eddy on page 372 of "Science and Health with Key to the Scriptures," which reads, "What you call matter was originally error in solution, elementary mortal mind,—likened by Milton to 'chaos and old night.'"

Is not this the lesson which Jesus sought to convey by the symbols in question: that the condition of mortal mind which causes thought to crystallize in the rigid molds of self-will, stubbornness, unresponsiveness, dogmatism, must yield to a freer attitude of open-mindedness, teachableness, receptivity to the constant revelation of Truth "new every morning and fresh every evening," before the unity of good can be demonstrated in human society and the kingdom of heaven come on earth? For did not the great demonstrator of spiritual being declare, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven"? Inasmuch as Spirit seems to material sense intangible, mysterious, unaccountable, Jesus likened it to the air which, although invisible, is felt in the blowing of the wind. "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit." That Nicodemus grasped the point is tolerably evident; for it was not, apparently, the figure of speech, but the thought of utterly repudiating the traditional view of life, with all that such a step involved, that baffled his comprehension. "How can these things be?" he exclaimed; as much as to say, Is it possible for one whose whole conception of existence has been molded from the start in conformity with the testimony of personal sense, to begin over again and find the true identity in the order of things which excludes the fleshly mind and its seemingly unshakable beliefs? For the domination and dictation of personal sense, and the demonstration and dominion of spiritual sense are irreconcilable opposites. The one, being "born of the flesh," is fleshly; the other, being "born of the Spirit," is spiritual. The one rests on the presumption of belief; the other, on Truth demonstrated.

In Science and Health (p. 28) we read, "The determination to hold Spirit in the grasp of matter is the persecutor of Truth and Love." Such, in belief, is the tenacity of error. Alas, how prone is mortal man to commit—unsuspectingly to be sure, because of constantly changing circumstances—the very offenses which, in the perspective of time, seem to stand out so glaringly in the history of former generations! Is not the pedantic spirit which rejected the Mes-

Copyright, 1920, by The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Massachusetts. sianic message while building "the tombs of the prophets" ever ready to close the book of revelation, smother the spiritual idea with the grave clothes of the letter, and bury the living Christ in the sepulcher of tradition? Spiritual sense, however, declares: "He is not here: for he is risen." "Behold, he goeth before you into Galilee [the realm of broadening concepts]; there shall ye see him," was the angel's announcement concerning their risen Lord to the loyal disciples who lingered in Judea (the seat of religious traditionalism).

Would not suppositional error destroy "the unity of the faith" in the Church of Christ, Scientist, part the seamless robe of Christian fellowship, and split the movement into factions and sects by prescribing doctrinal, dogmatic, and partisan interpretations of Mrs. Eddy's works as the test of loyalty and orthodoxy, even as the earlier Christian church was dismembered over a similar issue with regard to the Bible? How important, then, that Christian Scientists undertake, lovingly and wholeheartedly, the constructive task of proving the integrity and continuity of the organization, by demonstrating together each step along the way; refusing to allow technical misunderstandings, partisan prejudice, the spirit of recrimination, or the seeming personalization of evil to involve thought, breed dissension and bitterness, estrange affection, and sunder the tie which binds them fraternally, in Principle, to the common obligation of giving tangible expression to their Leader's prophetic vision concerning the future leadership of the cause, as outlined on page 347 of "The First Church of Christ, Scientist, and Miscellany," in these words: "What remains to lead on the centuries and reveal my successor, is man in the image and likeness of the Father-Mother God, man the generic term for mankind."

"The fruit of their thoughts"

MARTIN WACHS

PAUL, in his epistle to the Galatians, admonished them as follows: "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap. For he that soweth to his flesh shall of the flesh reap corruption; but he that soweth to the Spirit shall of the Spirit reap life everlasting." Might not this passage be properly interpreted to mean that we either receive or fail to receive our reward according to what we accept as consciousness, as Mind, God? Then it must be plainly evident that a right understanding of God and His infinite idea, man, is all that really may be gained,all that is worth while seeking for. In other words, it is the only means by which mankind can hope to gain a present realization of the kingdom of God, which Jesus explicitly said was within us, and so prove the truth of the statement that we are even as we think that we are.

James brings out much the same thought, though perhaps in a very different way, when he asks, "Can the fig tree, my brethren, bear olive berries? either a vine, figs?" Can evil be the product of good; God, or Spirit, be the author and maintainer of matter, the absolute antithesis of Spirit? These, as well as many other pertinent questions, which the world has anxiously awaited a satisfying answer for, are daily being made demonstrably evident through the study and application of Christian Science. In fact, if the world but knew it, they were all answered over nineteen centuries ago by Christ Jesus. The message and mission of Christian Science is precisely the same as that of the Master. men, and for all time, it brings to view "the tree of life," whose blessed leaves are and will ever be "for the healing of the nations" from all the fruitage of corruption. It interprets God and His unerring law of eternal good so plainly, so doing, it closed the eyes of mortals to man's God-given

that all may demonstrate that "a good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. . . . Wherefore by their fruits ye shall know them." It enables the student of divine metaphysics to prove that because God is good and omnipresent, and His idea, man, is ever one with Him as spiritual creation, that perfection is expressed everywhere and at all times, in spite of any so-called evidence to the contrary.

What, it may be asked, do the writers in the Bible mean when they speak of fruit? Even that "whose seed is in itself." The tree and vine are both used many times in the Bible to denote work, activity, wisdom, understanding, health, unfoldment, aspiration, the church triumphant, pure and undefiled religion, even the idea of Principle, the church of Mind. Their fruit is the gain or increase, the result of eternal unfoldment, even the effect which results from the activity of right thinking. As there can be no effect without cause, so there can be no thinking without Mind, God. All true thought is Mind expressed, and Mind is God. Then the only true fruit that there can ever be is the effect of divine Principle, the fruit of Spirit. The human mind, by an inevitable perversion, would try to simulate the real and spiritual, and so it is that the world perceives as fruit the gross product of materiality, even matter. This, of course, is what the Bible calls the fruit "of the tree of the knowledge of good and evil," the fruit of corruption, the very opposite of the fruit of "the tree of life." It is the eating of this forbidden fruit which results in every form of evil, sin, disease, and death. The fruit of Spirit, on the other hand, "is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." This is why the Godlike man is compared to "a tree planted by the rivers of water, that bringeth forth his fruit in his season;" whose "leaf also shall not wither; and whatsoever he doeth shall prosper."

That the unfruitful perish is vividly illustrated in the lesson of the fig tree which the Master saw while as yet it was without anything but leaves, while that the fruitful prosper is fittingly illustrated in Genesis, where Joseph is called "a fruitful bough, even a fruitful bough by a well; whose branches run over the wall." Mrs. Eddy has interpreted Joseph, on page 589 of "Science and Health with Key to the Scriptures" as follows: "A corporeal mortal; a higher sense of Truth rebuking mortal belief, or error, and showing the immortality and supremacy of Truth; pure affection blessing its enemies." There is nothing either barren or unfruitful in Spirit. These qualities of thought are entirely foreign to They are due to the belief that the law of good can Mind. be reversed; that there is a so-called law of matter which commingles life and death, good and evil, production and sterility, creation and destruction, success and failure, loss and gain. Such, however, are seen only by the carnal mind. They are the fruit of corruption, and have no place in divine Love. Accepting such fruit as their thought, men withhold from themselves the realization of the brotherhood of man, and perpetuate the belief of evil as having power, presence, and intelligence.

Acknowledgment that the universe of matter is real has brought nothing but suffering and sorrow, whereas the acknowledgment that there is but one universe, that of Mind, has brought freedom from both sorrow and suffering. Which, then, should we choose? Writing of the so-called knowledge of the world, Mrs. Eddy tells us on page 165 of Science and Health: "Physiology is one of the apples from 'the tree of knowledge.' Evil declared that eating this fruit would open man's eyes and make him as a god. Instead of NIT

dominion over the earth." It is even so with all the fruit which evil claims to produce. The spiritual alone is true, and an understanding of this enables a man to discern the absolute nothingness of evil and its suppositional creation, for then his eyes are opened, not closed, to the grand realities of being. Those who strive to demonstrate the allness of good and the nothingness of evil are putting off the old man and taking on the new, for "the fruit of the righteous is a tree of life."

The fruit of Christian Science is good works. A better and better understanding of that which really is, is proving to be all-sufficient for an abundant fruitage of healing works. That is what the world is seeking, and what it must inevitably discern in spite of itself. That the students of Christian Science may the better fulfill this noble purpose, Mrs. Eddy has given them the following rule, which may be found in Article VIII, Section 6, of the Church Manual: "It shall be the duty of every member of this Church to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind. By his works he shall be judged,—and justified or condemned." This clearly indicates that it is by their fruit,-their works,-that Christian Scientists are known. It therefore behooves us to follow in the footsteps of the Master, and obey the command, "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; that ye may be the children of your Father which is in heaven." The only fruit a Christian can see anywhere is "the fruit of the Spirit."

Our Daily Encounters

So often in our experience, particularly in our daily work, we meet those who seem to exert an influence on our lives, testing our dispositions, character, and ability to get along amiably with our fellow men. It is a time when tendencies heretofore unrecognized seem to manifest themselves, and which require what understanding of Christian Science we have to meet and master them. Thoughts of criticism, hatred, limitation, dissatisfaction, discouragement, cry out that they belong to us, although we have been innocent of the possession until some experience reveals their efforts to gain admittance as our consciousness.

Thoughts of criticism and hatred are sometimes born of a sense of jealousy. In our desire to be well thought of or liked by those whose opinions we value, or on the other hand, because of our belief of indifference toward us by those whom we have come to esteem, we magnify every act or word as being intentionally directed against us, and this seems to breed a sense of discord, which widens the breach until the very condition which our busy imaginations have concocted attains so-called reality. What is the solution? How shall we go about to restore that sense of harmony which we crave and which is the birthright of every one? Assuredly, there is but one way, and that is to solve the problem through the understanding of the Science of being. There is no other way; no one but God to whom we can turn, but oh! how glad we are that we can go to Him, who is our "very present help in trouble." This start in the right direction brings into operation the infinite application of Principle. Having knowingly acknowledged that God is Spirit, it follows that we must recognize that man, His image and likeness, must be spiritual, possessing and reflecting all the qualities and attributes of God. What becomes of the striving to be thought

somewhat better than our fellows? If we admit that, as Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), must we not also admit that each one of Love's countless ideas expresses just as much or as many of the Godlike qualities as another? If we see dishonesty or deceit or playing for favor expressed by those with whom we come in contact, is that our excuse for being merely humanly critical? Can we help any by this attitude? We have simply got to keep our hands off and let Truth uncover and destroy the error in its own way, or we are apt to become the victim of the thoughts we entertain and be judged accordingly. Every one usually knows his own faults without having us point the finger at him. Losing the sense of human criticism, we find that hatred usually goes with it, and this gives us a sense of freedom which savors of that "peace of God, which passeth all understanding."

We are apt to clothe those whom we esteem and admire with an unusual amount of intelligence and wisdom, and then proceed to measure our worth according to what we think is their estimate of us. Do we know enough to merit their recognition, or when in their company do we feel that we can talk to them as equals? The answer is often "No," and of course, naturally, this brings with it the thought of limitation, either because we have not had sufficient schooling or because our environment in earlier years has not been such as to have fitted us, in our opinion, for association with those who, we think, may be a little above us socially. We then look about to see how we can improve ourselves to gain their approbation, perhaps along paths foreign to our inclinations, temporarily forgetting, perhaps, that in our study of Christian Science we are getting an education in all the sciences, and the only education that really counts; for, said Jesus, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." We may think that our lack of education or our physique, or what not, may stand in the way of our progress, but when we know that God is infinite Mind, and that man reflects intelligence in abundance, which is true wealth; that man is not physical, but is the spiritual idea of Mind, we stand ready for the work which God has planned for us, knowing that there is no obstruction created by any other so-called mind which can block the expression of God's unerring law.

This should also dissolve the sense of dissatisfaction, for if we are always listening for God's command, "Go forward!" we should be happy in the work we are doing, for the only work there is or can be is to express God, and this ought to be a happy occupation. This does not mean that we should be content with a limited sense of activity, but, as Mrs. Eddy says (Science and Health, p. 326), "Working and praying with true motives, your Father will open the way."

When one has arrived at this point, discouragement seems to have destroyed itself and, this argument out of the way, we can march forward joyously in the work at hand, having lost the personal sense of any one as either good or bad, but knowing absolutely our relation to God and that all that really matters is whether or not our thoughts are right toward Him. In "Miscellaneous Writings" Mrs. Eddy gives valuable advice in the following statement (p. 308): "I earnestly advise all Christian Scientists to remove from their observation or study the personal sense of any one, and not to dwell in thought upon their own or others' corporeality, either as good or evil."

Salesmanship

ARTHUR FREEMAN

It has been said that almost all human activity is a form of salesmanship, in the sense that "to sell" means "to persuade" or "to convince." Mortals seem to be forever striving to influence each other in some way or another. One wants us to read his book, another to buy his wares, another to retain his services, still another wants us to accept his doctrine or follow his leadership. In this connection, business men usually distinguish between what they call "personal selling" or salesmanship by the spoken word, and "advertising" or salesmanship by the written word. Within the last decade so much thought and attention have been directed to advertising and selling, together with such related activities as propaganda, public speaking, pictorial expression, and so on, that it is important and interesting to consider the subject in the light of Christian Science.

The average writer of advertising, uninstructed by Principle, seeks as his object to influence or persuade his reader to accept or act upon suggestions or commands, whether they be to buy goods or otherwise, guided by so-called laws of psychology or persuasion. To him "results" are measured in direct returns, in dollars and cents earned, in number of people influenced, or amounts of merchandise purchased, and to this end he employs every trick of the so-called "advertiser's art." He appeals to the passions, the cupidity, the credulity, the curiosity, and the propinquity of his readers, with every subtle and enticing form of language and illustration. To accomplish these results he has made so thorough a study of the ways and means of influencing the human mind as to dignify his profession with the pretensions of an art, his boast being that advertising can sell anything. For years the advertising of medicines was so ingenious as to have it said that the very wording of this form of propaganda was such that it induced, through suggestion and fear, the very ills it professed to cure. To-day we see this insidious influence still manifested in the advertising of nostrums, narcotics, and in persuading readers to indulgences that lead to the wide gate of destruction. The same has been true of socalled personal salesmanship, by which a mortal uses all the subtleties of personality and political pressure to further his ends. Treating, story-telling, cajoling, using "pull," appealing to friendship, and scores of other methods are daily employed to "sell" something to somebody.

It is gratifying to note that The Christian Science Monitor was one of the first voices raised in protest against these forms of advertising and selling, and that since its appearance, in the year 1908, there has been a great reform in both these activities. Much good has been effected as the result of agitation for cleaner advertising and honest selling; a world-wide advertising club movement with "truth" as its watchword was formed; and to-day hundreds of cities have organized better business bureaus looking toward the reform of the many evils still practiced in the name of salesmanship. But encouraging as are these many evidences of a human sense of right, still only as a man grasps the true sense of divine Principle as taught in Christian Science can he become the salesman of the new order.

In the Manual of The Mother Church, under the caption, "A Rule for Motives and Acts" (Art. VIII, Sect. 1), the Founder of Christian Science, Mrs. Eddy, presents a rule of conduct which every salesman could profitably write on the tablet of his heart: "Neither animosity nor mere personal attachment should impel the motives or acts of the members of The Mother Church. In Science, divine Love alone governs

man; and a Christian Scientist reflects the sweet amenities of Love, in rebuking sin, in true brotherliness, charitableness, and forgiveness. The members of this Church should daily watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced erroneously." Here is an inspired method for obtaining real results for him whose business it is to write advertising or who works as a "salesman," as well as for those who purchase goods or services as a result of such advertising or selling.

The salesman who can approach his prospect without "animosity" against competitive goods, and without the "mere personal attachment" of working to favor some one as against some one else, has taken a great forward step toward real success in salesmanship. Reflecting "the sweet amenities of Love" means to a salesman that he will not sell anything which is not of mutual benefit, which will not bless all mankind. It indicates that his attitude toward his customer must always be one of "true brotherliness, charitableness, and forgiveness"—that he does indeed "love his neighbour [customer] as himself." The spiritually enlightened salesman does "daily watch and pray," even before the day's work has begun, to "be delivered from all evil"-especially those forms of evil which manifest themselves in "prophesying, judging, condemning, counseling, influencing or being influenced erroneously." And as a result, his daily needs for "sales" are beautifully met. He has learned the great lesson that evil of any kind when accepted can never do aught but influence mankind erroneously. To induce people to give or withhold, to act or remain passive, to help or hurt, by the subtle influences of threats, pressure, wholesale sabotage, "drives," or insidious propaganda of any sort, is never success no matter if it seems to succeed, for, Mrs. Eddy says, "Let it be understood that success in error is defeat in Truth" (Science and Health, p. 239). Only by divine Love is mankind rightfully influenced or persuaded.

Mrs. Eddy's admonition beginning on page 82 of Science and Health should be the touchstone by which to test the validity of every advertisement, every sales talk, every speech or other form of human persuasion. "In a world of sin and sensuality hastening to a greater development of power," she says, "it is wise earnestly to consider whether it is the human mind or the divine Mind which is influencing one." Never to induce except for good, never to persuade except to the glory of God, never to influence erroneously, either by word, by action, or by picture, is to put into operation in salesmanship divine laws of activity whereby good results will flow that are not to be compared with those so-called "results" secured by those who "influence erroneously."

"The dear children's toy"

CATHERINE ALLER

ON page 252 of "Miscellaneous Writings" Mrs. Eddy, speaking of Christian Science, says: "It is the dear children's toy and strong tower; the wise man's spiritual dictionary; the poor man's money; yea, it is the pearl priceless whereof our Master said, if a man findeth, he goeth and selleth all that he hath and buyeth it." To one who was considering prayerfully the great problem of how to teach little children the profound truths of Science, these words brought great inspiration. Realizing, as all earnest Christian Science mothers and teachers in our Sunday schools must, the great importance of this work, this fundamental trust, we are sometimes perplexed as to how to present the truth. We sympathize keenly with a child's dislike of

being "preached at" and desire to avoid the mistake of making the unfoldment of Truth appear as a hardship or as an unpleasant duty. Children turn naturally, spontaneously, joyfully to their toys. They do not need to be coaxed or driven. Delight in their play is the very essence of it. And yet how prone we are to make hard work of our children's sacred and beautiful toy! Because we have found the assimilation of the truth at times hard, due to our false beliefs, we need not assume that the children must find it so.

"Children are more tractable than adults, and learn more readily to love the simple verities that will make them happy and good," writes Mrs. Eddy on page 236 of our textbook, "Science and Health with Key to the Scriptures." Then if we find listlessness, indifference, or rebellion in their attitude toward instruction in spiritual truth, may it not be that we, in teaching them, have not balanced our sense of the importance of our task with an equally important sense of its joyousness? Is there anything to forbid a merry heart for the work? Is there not a stain of false theology in the suggestion that education in religion and lightness of heart do not go together?

A little boy of five, returning from Sunday school one morning, carelessly dropped his hat and coat into the nearest chair. Then, suddenly remembering something in his recent lesson, he caught them up and started for the coat closet, laughing, "'Thou shalt not steal'-thy mother's time!" A child who has been taught to regard spiritual truths as happy, everyday affairs does make of them a "strong tower." David said of God, "Be thou my strong habitation, whereunto I may continually resort." The writer was walking once with a little child whose understanding of Science was daily, naturally unfolding. In the path lay the lifeless body of a little bird. The child, regarding it casually, remarked, "I am glad the real bird is having a happy time." One thankfully realizes how naturally the truth can lift a child's thought above the mesmerism of centuries of fear and false beliefs. There is no better way to teach our children Christian Science than to live it and love it ourselves, for, as Mrs. Eddy says in "The First Church of Christ, Scientist, and Miscellany" (p. 185): "Truth, Life, and Love are formidable, wherever thought, felt, spoken, or written,-in the pulpit, in the court-room, by the wayside, or in our homes. They are the victors never to be vanquished."

Age

KATHERYN STITES BROOKS

AT some period in the experience of each one, there comes the suggestion that it is necessary to save for a time when he shall have passed maturity, or the prime of life, and settled into inaction, or limitation, known as old age. A man is taught to hoard his wealth, in order that he may have sufficient means to keep him until the end, the suggestion being that death will change whatever seems discordant. The subtlety of the belief in old age is shown in a very common practice, one held as almost a sacred rite in some families, that of remembering or acknowledging birthdays by an exchange of gifts, and so mesmeric is this belief that the discontinuance of such a practice, after a glimpse of enlightenment, is often misconstrued as unloving.

On page 246 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "Never record ages." It is impossible to recall a birthday without thinking that the one so limited is that much older, and according to mortal mind calculation, that much nearer the inevitable end. We rejoice

that the realization of the truth is eliminating to a great extent this phase of mortal belief. Early in the experience of one not then a student of Christian Science, this picture of a man, decadent, sick, feeble, and dying brought untold fear and unhappiness. The belief that parents were growing old and inactive, and that the time would ultimately come in his own life when disease and suffering were unavoidable, frequently brought questionings as to the reason for it all. It was not until an understanding of the truth as taught in Christian Science was apprehended that his fear was overcome and man's indestructibility as the reflection of God appeared. The understanding that because God is, and, as stated in the first chapter of Genesis, man is His image and likeness, therefore man can express nothing that is unlike God or Mind, brought out the fact very clearly that the eternality and indestructibility of God, or Truth, is reflected by His likeness, man.

With this reasoning came the light that, as our Leader tells us on page 318 of Science and Health, "the material senses originate and support all that is material, untrue, selfish, or debased," and, quoting from the same page, "We must silence this lie of material sense with the truth of spiritual sense." Here, then, was the problem and its solution, and a consistent, persistent denial of the claims of the senses expressed as decrepitude and decay brought an ever increasing recognition of man, unimpeded or unimpelled by belief, spontaneously expressing liberation, the vigor and endurance of Soul, apparent always as maturity, perfection. Mrs. Eddy says on page 246 of Science and Health: "Life is eternal. We should find this out, and begin the demonstration thereof. Life and goodness are immortal. Let us then shape our views of existence into loveliness, freshness, and continuity, rather than into age and blight."

[Written for the Sentinel]

Healing

CORA ARMSTRONG KELLAM

I STUDIED like a troubled child,
I pondered line on line.
I wondered why I did not win
The gentle healing sign.

I looked again for answered prayer,
But only looked in vain.
My faith was dulled, my courage ebbed,
My tears came down like rain.

Yet while I struggled hard to find The truth that sets men free, There came to me no healing touch, No peace nor ministry.

But when I ceased to think of things
That God could do for me,
And thought of Truth, the healing cause,
Unfolding harmony,

The healing came and it was seen, More understandingly, That God decides what shall be done, And Truth heals instantly.

Obedience to Mind's simple rule
To know Truth is the key
That opens wide the gates of Life
And heals infallibly.

Christmas

IF Christmas means anything in Christendom, it must mean rejoicing. And yet this rejoicing should be the very opposite of the ideal of rejoicing which exists in the carnal mind. The rejoicing should come not from a sense of pleasure in the flesh, but from a realization of the allness of Principle and the utter nothingness of matter. When Job said, "In my flesh shall I see God," he did not mean that, some day, the physical man would stand before an anthropomorphic Deity, in a material heaven. He meant the very reverse of this. He meant that he would live to prove the power of Spirit to overcome the flesh, in the healing, as the Psalmist promised, of all his diseases and the mastery of death. That the writer of Job had grasped the full implication of what he was saying, any more than did the Psalmist, is improbable. They indeed saw in a glass darkly. Not until the first Christmas had passed, and Jesus the Christ had trodden the Jordan valley, preaching on the hillsides, healing in the cities, and, in the night-time, striving to read the story of creation under the stars, was a new meaning to be given to the words of the Lord, spoken out of the whirlwind, "when the morning stars sang together, and all the sons of God shouted for joy.

Christmas then is the day of the marvelous demonstration of the virgin birth. It is the anniversary of the day when, as Mrs. Eddy writes, on page 29 of Science and Health, "The illumination of Mary's spiritual sense put to silence material law and its order of generation, and brought forth her child by the revelation of Truth, demonstrating God as the Father of men." Every day then should, to the Christian, be a Christmas day, a day of rejoicing over the knowledge that matter is nothing, and the flesh consequently subject to Spirit. That was the whole tenor of the teaching of Christ Jesus, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." Because of this, it is the work of every Christian to strive hourly to see with the eyes of Jesus the Christ, to hear with his ears, and to walk in his footsteps. This can only result in the determination daily to take up his cross, as he required, to shoulder, that is to say, the world's hatred of Truth and Love by a surrender of one's own materiality. Then of all days ought Christmas day to be a day of spiritual realization rather than of material indulgence. But herein comes the danger of days set aside as religious festivals. Why should a man be better or worse one day than another? Does the image and likeness of Principle vary in its perfection? As Mrs. Eddy writes, on page 260 of "The First Church of Christ, Scientist, and Miscellany," "An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind. The despotism of material sense or the flesh would flee before such reality, to make room for substance, and the shadow of frivolity and the inaccuracy of material sense would disappear."

At Christmas then or Easter, at Easter or Michaelmas,

and so back to Christmas, a man's whole duty is the same, the struggle to overcome the flesh, and in this struggle he gradually achieves victory as he comes to understand what Love really means, and to do this he must know God aright, for God is Love. "The starting-point of divine Science," Mrs. Eddy says, on page 275 of Science and Health, "is that God, Spirit, is All-in-all, and that there is no other might nor Mind,-that God is Love, and therefore He is divine Principle." This is simple logic. God, Love, the Father of all, could create nothing unlike Himself, since He is infinite Mind. Consequently, as He made everything that was made, and made it good, all creation is His image and likeness, and reflects nothing except Love. But as every identity is distinct and eternal, the realities of every material counterfeit must express joy in and love for one another. And it was something of this nature, surely, of which the Psalmist was thinking when he sang, "Let the floods clap their hands: let the hills be joyful together;" or which Isaiah was realizing when he wrote, "For ye shall go out with joy, and be led forth with peace: the mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands."

The love of God, then, is the consciousness of supreme harmony with which God surrounds all His creation. The infinity of God would be destroyed if one ray of inharmony, one flash of hate, could penetrate this consciousness. In it there is no room for preferences, because nothing is reflected but God, Love, and this was why Christ Jesus, looking far beyond the material gaze of the crowd pressing about him, at Capernaum, could reply to the declaration, "Behold, thy mother and thy brethren stand without, desiring to speak with thee," in the words, "Who is my mother? and who are my brethren?" and then, stretching forth his hand toward his disciples, continue: "Behold my mother and my brethren! For whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother." It was through this understanding of infinite harmony that Christ Jesus was able to perform his miracles, to make his demonstrations. He understood that nothing that actually existed could exist inharmoniously, or out of Principle. Consequently, he realized that as God, the creator, was Love, Love itself must be divine Principle. Everywhere, in other words, he replaced the counterfeit by the reality, his mother Mary by the image and likeness of God, sin by righteousness, and sickness by health. Thinking only of Principle,-hate, materiality, and evil were resolved into their own nothingness. And thus he rejoiced hourly in good, and kept daily his Christmas day.

If Christmas day, then, is to differ in any respect from any other day, it should be in a more joyful recognition of the freedom which a man may win, through an understanding of Principle, from the bonds of the flesh. Spiritual happiness, and there cannot possibly be any other, is entirely dependent upon the measure in which this freedom is attained. But to be obliged to wait three hundred and sixtyfour out of every three hundred and sixty-five days in order to experience this in full is, surely, to admit that there is something wrong with the philosophy which indulges the suggestion. If Christianity means anything at all, it means the subjection of the flesh by Spirit. The whole Pauline message is one prolonged impeachment of the temptation of the flesh, summed in the warning to the Corinthians, "Now this I say, brethren, that flesh and blood cannot inherit the kingdom of God." If then Christmas day demands a celebration different from that of any other day, should it not be in the way Mrs. Eddy chose for herself, and recorded on page 262

of "The First Church of Christ, Scientist, and Miscellany,"
"I love to observe Christmas in quietude, humility, benevolence, charity, letting good will towards man, eloquent silence, prayer, and praise express my conception of Truth's
appearing"?

FREDERICK DIXON.

Truth for the Children

CHILDREN, like other people, need to know daily that the Christ is here and now. In Christian Science, one learns that Truth, taking the place of any form of error, is and always has been the Savior. A child will love the meaning of the true Christmas if, day by day, he has found that the turning to the truth has brought about healing and constant joy. By the very knowing of the truth, one is proving that Truth unfolds in just the right way and at just the right time. Thus the real birth of the Christ goes on for each one to-day. As Mrs. Eddy says in "Christ and Christmas" (p. 53):—

Forever present, bounteous, free, Christ comes in gloom; And aye, with grace towards you and me, For health makes room.

Through kindly training, a child should be shown the way in which the truth is ever at hand to replace with the right action of the divine Mind what seems to be wrong. Even a child knows the presence of Mind. Mind, or God, is just the name for the cause for one's being really alive. One is truly alive and happy only in knowing good. Gladness in living, in knowing God as Mind, or divine Love, is finding what the true gift of God is each day. This gladness does not depend on the having of any mere things. It comes about, instead, through that really right thinking which is sure knowing of only what the one Mind knows. The one Mind is conscious of strength, health, freedom of action, joy, and goodness of every sort; and all this that the divine Mind knows is the perfect gift of God.

When we reason thus that God is divine Mind, we feel at once that this Mind is present. It never could be absent for an instant. Its right action always has been here to bless, heal, and make happy, in spite of what any one may have believed. If a child, or any one else, sees that what true Mind does is right, hurts no one, and means joy for all, then eager love for the right allows neither room nor time for error of any sort. Both the child and the adult, of course, need to know what is right to do, much more than what not to do. That parent who merely tells a child not to do this and not to do that is hardly turning the child to the right way. To show how the one Mind, divine Love, keeps the child of God busy with kindly and happy action may require the parent to be ever alert; but the effort to point out to a child how to be rightly active is surely more worth while than it would be merely to forbid the many things that seem wrong. The really good work of both parent and child lies in the knowing of the presence of Mind.

True Christmas is proved to be every day when this good work goes on every day. Only to deny error is not to know the truth. Through patience in the home and in the school, each one can prove that the divine Mind does express itself as right action here and now, no matter what may seem. Quiet sureness that the one Mind, causing only true idea, is all there is to divine Love showing itself loving is a constant joy; and joy is, of course, the essence of Christmas. In any doing, even in what is called play, the joy lies simply in the doing of what Mind directs in order

and yet with vigor. The vigor and gladness of this action do not depend on the many things that are often supposed to be pleasant. The child, and likewise the one who has become as a little child in order to enter the kingdom of heaven, can be happy with the simplest of living and doing. In fact, the joy in simply knowing the truth in all its boundless goodness is the secret of entrance into the kingdom here and now.

Christmas, then, is daily good for all who know the truth, for all who are children in every sense of the word. To the simple seeker for Truth, the Christ is always present as the right idea of the divine Mind, in place of any human sense of things. The glad proving of this right idea as present does not depend on and cannot be hindered by any false belief. What has been mere belief or fiction in regard to Christmas has to give way to the truth, which in its fullness is surely good enough to suffice for all. When that which only excites has been replaced by the active joy of true Mind, nothing is lost but real good is gained. This good is not more at one time than at another nor more for one than for another, but is ever without limit and without lapse because it comes from and is maintained by divine Love itself. It is only to unreal mortal sense that the Christ, or Truth, has ever even seemed to come or to go or to vary. As Mrs. Eddy says on page 61 of "Unity of Good," "To material sense, Jesus first appeared as a helpless human babe; but to immortal and spiritual vision he was one with the Father, even the eternal idea of God, that was-and is-neither young nor old, neither dead nor risen. The mutations of mortal sense are the evening and the morning of human thought,—the twilight and dawn of earthly vision, which precedeth the nightless radiance of divine Life. Human perception, advancing toward the apprehension of its nothingness, halts, retreats, and again goes forward; but the divine Principle and Spirit and spiritual man are unchangeable,-neither advancing, retreating, nor halting.'

The parent, or any one else, who knows this fact of the constant presence of the Christ is prepared to enjoy the ceaseless Christmas and to express for others always the utmost of kindly help and good cheer. On page 261 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy says, in a little article called "Christmas for the Children": "Methinks the loving parents and guardians of youth ofttimes query: How shall we cheer the children's Christmas and profit them withal? The wisdom of their elders, who seek wisdom of God, seems to have amply provided for this, according to the custom of the age and to the full supply of juvenile joy. Let it continue thus with one exception: the children should not be taught to believe that Santa Claus has aught to do with this pastime. A deceit or falsehood is never wise. Too much cannot be done towards guarding and guiding well the germinating and inclining thought of childhood." The whole of the little article is helpful, like all of Mrs. Eddy's other writings, for whatever she has said has been and is for the turning of all to the truth, to the Christ whose real celebration must be unceasing practice of Christian Science in accord with divine Principle. GUSTAVUS S. PAINE.

"Nearer, my God, to Thee"—man's constant prayer, "Nearer, my God, to Thee," having no care. The way is ever bright, Love is the guide; Truth is omnipotent, good does abide.

SARAH AIMEÉ BRUCE.

Testimonies of Healing

A deep sense of gratitude impels me to express, through the periodicals what I have been privileged to experience through Christian Science. In my fifth year tubercular wounds appeared on my arm, from which I suffered for many years until healing took place through Christian Science. At that time I was in Davos, a health resort for tubercular patients, where, as a last hope, I had put my faith in the concentrated rays of the sun and thought they would surely cure me, but I did not recover. Two years earlier my relatives had spoken of Christian Science. At that time I was in a very miserable condition, did not want to know anything about it, and was taken to a hospital. I spent four cheerless months there, and when I left my health was still worse. Despite all these severe experiences, it was some time before I really turned to God as the only Physician. During the time spent lying in the sun I read a great deal; but mostly books which in no way promoted my growth. Gradually I tired of this kind of reading and replaced it with the Bible and other books which were more uplifting. When my health failed to improve, however, I began to awaken and felt that there was surely something better for me than constant sickness. The Christian Science literature then came to my attention. I began to read it and found that for which I had long been searching, namely, not only the promise of physical healing and relief from the inactivity of which I was tired, but a true knowledge of God. I now wanted to trust in Him, and felt His help was near.

At this time a practitioner came to visit in the neighborhood. I realized that this was the answer to my prayer. I turned to her in my hour of greatest helplessness and shall never forget her comforting words which lifted me out of despair. From that day on I used my arm and gradually took up work again. In a short time the wounds closed, for the healing rays of the truth had done their work. I had many relapses but each time the trouble was overcome in a short time through kindly help. God did not desert me, and I often reiterated mentally the following words of Mrs. Eddy: "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22). I had chosen God as my Physician, I trusted in Him, and He helped me. Since that time I have enjoyed the best of health and look back upon the days of sickness as upon a dream of the past.

During my illness I had given up hope of ever being useful to my fellow men. Then, when I had unexpectedly regained health and strength, another problem presented itself which had to be solved, namely, what profession was I to follow in order to become active in the great working world? God showed me the way. I went to a strange city where I stood alone, without human help, and had to pass through many battles before I had attained to assured supply, but divine Love illumined the way, and in January, 1919, I was beautifully provided for, being unexpectedly offered a position which would meet my every need. I gladly accepted it and thanked God in my heart. He had been my supply, and through this experience I had especially learned to lean upon the rock, Christ, and resolved to trust God with all problems which might confront me.

Until now I have mentioned only the benefits received in a physical and material way, but Christian Science offers us far more. It opens our thought to, and rewards our efforts with, a knowledge of Mind's unlimited opportunity and guides us in the way of Truth. Through Christian Science I sincerely hope to be a better woman and to be

able to do more for my fellow men. God has done great things for me, and it is my earnest desire to know Him better, to love Him more, and to work for Him. Deep gratitude is also due Mrs. Eddy, for she has revealed the truth which heals all our diseases. May this testimony comfort many a struggling heart and help it to find the way of Truth.—(Miss) Betty Gredig, Davos, Graubünden, Switzerland.

Nine years ago I strained my right side and the doctor said I would have to have an operation, which I would not agree to. I was in bed a month and did not seem to get much better, so made an effort to get up and go to my mother's to be near my sister, who had been healed in Christian Science. I traveled a hundred and fifty miles, and although I was tired my side did not bother me much; but next day I had a very bad spell. The practitioner was not at home so a doctor was called, but he could do nothing as I did not want medicine. That afternoon the practitioner came and gave me a treatment and I fell asleep. When I awoke I got up and dressed and in a few days returned home and was able to do all my work. I was also healed of constipation at the same time. I am certainly more than grateful for Christian Science and to our beloved Leader, Mrs. Eddy, who has opened the way to Truth and to happiness for us.—Mrs. D. A. BEARDSLEE, Westmoreland, Calif.

4

Until two and one-half years ago I had heard little and knew nothing definite of Christian Science. I had undergone twelve operations, and was almost always under the care of physicians. At last, having exhausted the resources of our excellent doctors, upon their advice I went to one of the most celebrated clinics in the country, where, after many examinations, tests, X rays (nine in all) I was told by one of the leading doctors that I might live a year, or a year and a half, but that I could not expect to be well after having had so many parts removed, and that I had chronic bronchitis, a floating kidney, weak bladder, tumors, partial paralysis of the bowels, a tubercular cough, abnormal heart action, and neuritis. I was advised to go west for several months to escape the cold spring.

I went west and was becoming worse each week. I coughed for hours at night, and when I did sleep I was not refreshed. The address of a lady I had formerly known was sent me. I telephoned to her, and she immediately invited me to go to church with her the following Sunday and to take dinner with her afterwards. When I went to her home I unburdened my aching heart. I wanted to get home to my loved ones, I wanted to be well, I wanted to work and play as other women did; I was so tired of the bondage of the pill box and medicine bottle. This dear friend said, "Let go of all the false material beliefs and be as God made you, His perfect child." Then she told me of Christian Science, of the happiness and the health that are ours when we accept God as All-in-all. I listened and believed every word. That church service left me with peace and security. I felt rested as I had not felt for months. That same day I threw the pills into the furnace and poured the medicine into the sink, and from that hour divine Love has been my only Physician. The next day (Monday) I went to see a practitioner, who lovingly explained the rudiments of Christian Science to me, lent me literature, and began treating me. In two treatments the paralysis of the bowels was banished into its native nothingness; with two more treatments two purplish, swollen

toes which had been frozen and gave me much pain became normal; a few days later two tumors disappeared. I slept like a child and my cough lessened greatly. At the end of five weeks I came home a well, happy woman and have since remained so. Little discordant conditions have arisen but have always been overcome with my own knowledge of God's all-power, or that of a faithful practitioner. Recently I experienced a great loss, but by realizing that God is the only Life I have been able to rise above a sense of sorrow and separation. I am very grateful for our Sunday morning services, which are a source of help; for our Sentinel and Journal, which bring inspiration, and most of all for Mrs. Eddy's pure, clear thought which enabled her to give the truth to the world.

Mrs. Alfred Martens, Medford, Wis.

In testifying to the benefits which I have experienced through Christian Science, which has taught me the operation of divine law,—that everything that is is the direct effect of the law of God, the law of good, the one basic law which governs the entire universe,—I find that to enumerate them

would be almost an impossibility.

Since becoming interested in Christian Science several years ago, I have been able, either with the help of a practitioner or with the honest application of my own understanding, no matter how small that seemed to be, to meet and overcome every problem that has presented itself. Sometimes the mortal self, so called, has failed to accept one result as being the one it wanted, but invariably the wisdom of its working out has been proved at some later period.

Perhaps the first striking proof which I had of results obtained was when I was instantly cured of the smoking habit, which I had indulged in for a long time. While that demonstration was made almost five years ago, it still stands out vividly in my memory, for the reason that I had never been able to bring myself to the point where I was willing to give up smoking; and this was a proof that the only thing required of me, in order to bring about right results, was willingness to do the best I could to understand God, as revealed in Christian Science.

I have since found, as every one must find sooner or later, that no matter what the problem, whether it is that of lack of supply or of health, of happiness or of a harmonious relationship with the rest of God's universe, the truth of the whole matter is that the claim is nothing more nor less than a lie about God and His reflection, man and the universe; but this lie cannot affect one so long as he is honestly and consistently doing what to his own highest understanding seems the right thing to do under the guidance of the inspired teachings of the Bible and the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

The Christian Science literature furnishes constant inspiration in our endeavor to know God and His Christ. I am indeed grateful for the gift of Christian Science, as coming from God, through Mary Baker Eddy, its Discoverer and Founder.—F. O. Edwards, Chicago, Illinois.

+

Christian Science has done so much for me during the two years I have studied it that I feel I must tell others what it has done. I was taking treatments from a doctor of manual therapeutics when I started to study Christian Science also. I found my spinal condition worse and each of his treatments more and more painful. Realizing that I must choose, I chose the truth, Christian Science, and have been glad I did so ever since. The constant backache and other discordant conditions accompanying it soon faded

away and have never returned. By studying the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of chronic constipation, nervous indigestion, weakness, and a melancholy outlook on life.

Six months after starting to study this beautiful truth I found I needed the help of a practitioner, who lovingly showed me that I must let go of resentment, self-pity, selfishness, and limitation. I was also healed through her help of chronic gastritis, severe headaches, and financial difficulty. Discordant family conditions have been made harmonious. But what I am most grateful for is what I have learned about God. The Bible, which I knew almost nothing about, has become a beautiful, practical, spiritual guide and I have come to love it. I am certainly grateful to God for Christian Science and the peace and love and regeneration it has brought.—(Mrs.) Ruth Crandall Barry, La Manda Park, Los Angeles County, Calif.

It is with a deep sense of gratitude that I give this testimony. I took up the study of Christian Science in a very desultory sort of way, not feeling that I needed anything that it might give, but seeing that others were interested in it and realizing that they were finding happiness and comfort from the study of it I commenced reading Science and Health. Although without any very deep appreciation at the time, I saw something of the truth it contained and was healed of throat trouble and catarrh, from which I had suffered for many years. Since then I have seen the power of Truth made manifest through the understanding of practitioners and have experienced through their loving help absolute freedom from hemorrhoids, weak back, lumbago, and a most distressing affection of the skin. This last-named belief was very tenacious but at length was overcome, as all error must be, for "Truth is always the victor," as Mrs. Eddy assures us on page 380 of Science and Health.

I am indeed grateful to Mrs. Eddy for giving to the world our wonderful textbook, "Science and Health with Key to the Scriptures," and all her other writings. I am also very thankful that we have our periodicals, that I have the privilege of being a member of The Mother Church. To be able to say, "I have fought a good fight, I have finished my course, I have kept the faith," is my one desire.

(Miss) Rose Ethel Burton, Chatham, England.

My debt to Christian Science is growing daily, for it is constantly bringing more and more joy into my life, and is giving to me a peace of mind which I had never previously experienced. This joy is the result of healing, physical, mental, and moral, and is the evidence of what the apostle to the Gentiles termed being transformed by the renewing of the mind. Such an abundance of happiness and contentment has come to me that it is impossible, within the scope of this testimony, to more than touch upon some of the blessings so freely bestowed.

During the years that have elapsed since my serious attention was first called to Christian Science, through the healing of my father, I have witnessed many healings among the members of my family, and have experienced not a few myself. These included the overcoming of ptomaine poisoning, rheumatism, bronchitis, grip, fever, and chronic headaches; the effects of several accidents have also been overcome in a remarkably short time. I have been healed of backaches and extreme nervousness that had troubled me almost continuously for many years. A study of "Science and Health with Key to the Scriptures" by Mary Baker

Eddy, also enabled me to leave off eyeglasses that I had worn for about two years. This was over fifteen years ago and I have never had occasion to use them since. At about the same time I awakened to the fact that through merely reading our textbook I was healed of nasal catarrh, which simply disappeared, although it had been a prolonged case and three operations had failed to afford permanent relief.

During an extended experience in business, both as an employee and as employer, I have found Christian Science an inestimable daily help, and I have been aided by its availability in meeting problems of every character. This practical knowledge of God or divine Principle, and His Christ, or Truth, has enabled me to undertake and successfully accomplish tasks which, without this understanding, would have been regarded by me as impossible of achievement. It would be strange indeed were I not ready, at all times, freely to render grateful acknowledgment for these many benefits.

While duly appreciative of all the help referred to, I am most particularly thankful for Christian Science for revealing the true God to me. It has given me a definite and demonstrable understanding of God as divine Mind, or Principle, and of man as the eternal idea forever abiding in that Mind, and not in matter. This understanding is the basis of all Christian Science healing.

Thus, Christian Science is bringing to me daily spiritual enlightenment through uncovering and correcting erroneous mental processes, and replacing these by the right idea. Christian Science has brought to me a right estimate of the great mission of Christ Jesus as the Way-shower, and has given to me an apprehension of the fundamental difference between Jesus, the great Exemplar, and the eternal Christ or Holy Ghost, the Comforter, which abides forever in the divine consciousness, healing the sick and redeeming the sinner. My heart is full of love and gratitude to Mary Baker Eddy, whose purity of thought and singleness of purpose enabled her to establish a church, the foundation of which rests upon healing, in complete accord with the life and purpose of Christ Jesus. Thus Christian Science is proving, to-day, that the Christ-method is as available now as in the time of its earlier demonstration. I am profoundly grateful for the light that Christian Science throws upon the Bible. and for all the published writings of Mrs. Eddy, and the periodicals which she founded. These are indeed the leaves of the tree, for the healing of the nations.

HENRY M. NEWMARK, Boston, Mass.

4

I am very thankful to God for Christian Science and for what it has done for me. A little less than a year and a half ago it found me almost an invalid. Three operations which I had undergone had left me in a critical condition. Later I was thrown from a street car, fracturing my hip bone, which left me very lame. I met a student of Christian Science who led me into the study of it. I at first could not understand it. I believed in divine healing and had been healed of many ailments, but did not understand how I was healed. I asked God to heal me and believed He did, so through my faith I was healed. I am very grateful for the understanding that has come to me through the study of the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have overcome many ailments, among which are stomach trouble, severe headaches, and shortness of breath, lameness, and the condition which the operation had failed to relieve. While away from home one of my daughters had influenza, followed by pneumonia. We telephoned a practitioner for help and my husband and I decided to bring her home, a journey of about three hours. Before starting I telephoned the practitioner to help us while on the train. She lovingly told me there was no danger and that my daughter would be perfectly safe. In two days after arriving home my daughter sat up, and was all right from that time on, for which we give God the praise.

We have had many demonstrations in our home too numerous to mention. I am grateful to God, and to Mrs. Eddy, the great and noble woman who gave this truth to the world. I am grateful for the many blessings I have received through reading the textbook and the periodicals, also for the Lesson-Sermons.—Mrs. J. M. Allen, Saint Jo, Texas.

+

Christian Science means everything to me. In April, 1917, I turned to it for physical healing. For eight months or more I was daily doctoring for hemorrhages, but without any result. Growing weaker and thinner from the great loss of blood, I became so discouraged that I prayed to die. In this discouraged condition I threw away all my medicine, for I had given up all hope of ever being well again. A day or two later I heard of Christian Science for the first time. I went to see a practitioner who lived a block and a half away. To my great surprise I walked there and back without fear of the results. I purchased the textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, began treatments on a Monday evening, and on the following Wednesday morning I was healed. I am indeed grateful for the truth. My child has had many beautiful healings, and I cannot begin to count our blessings, for they are without number.

I am grateful to the kind practitioners who have helped me out of the unreal into the real; for all the literature, Mrs. Eddy's great gift to the world; and above all to God for His great love to all mankind.

(Mrs.) MARIE HIRSCHMAN, Gwynneville, Ind.

4

After receiving, for over ten years, the benefits which Christian Science bestows, I feel it a duty as well as a privilege to testify to divine Love's healing and saving power. I left California early in March of 1909 for a stay of several months in a far northern state. Soon after my arrival there Science was presented to me by new-found friends, who had had three beautiful healings in their family only a few months previously. These healings and the reading of the literature so appealed to me that I very soon discarded all the material remedies I was then taking for chronic constipation, supposed to be inherited, and was healed. Later on I was healed of a throat trouble, which manifested itself as chronic tonsillitis, more or less severe attacks coming on every winter, accompanied by heavy colds. For these healings I am most grateful.

I want to express deep gratitude for the saving and protecting power of divine Love expressed through the ninety-first psalm. Last winter when the great fear called influenza was abroad in our land, this psalm was in my thought every day for almost two weeks, and I found myself repeating several verses of it but more often the entire psalm, as I walked on the street or was about my duties at home. I memorized this entire psalm without the least effort on my part, and the protection it afforded is certainly great cause for rejoicing. I was without fear of the epidemic the entire winter. Later on a cold was manifested, but as I had no fear it had no power over me and was scarcely apparent

to others. I have not had a cold since then. What I am most grateful for is the spiritual help I am receiving daily, in a better understanding of the Bible gained through the study of our textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. These two books are now my greatest treasures. I am in a measure, at least, being lifted out of the false belief of life in matter as manifested in fear, batred, resentment, self-pity, discouragement, and many other of the carnal mind's expressions. While at times the way seems dark, by holding to Principle alone I am enabled to press on in the straight and narrow way. I am grateful for class instruction, and for membership in The Mother Church and in a branch church. I am indeed grateful for our periodicals and those contributing to them. Every article has encouragement and healing, and especially during the last few months have they been messengers of joy to meet my present needs. In humble gratitude to God, to Christ Jesus the Way-shower, and to our dear Leader, Mary Baker Eddy, I submit this testimony.

(Mrs.) BERTHA W. KELLEY, Los Angeles, Calif.

It is with a heart full of gratitude for Christian Science that I am sending my testimony to the Sentinel. I first heard of Christian Science in 1917, through a friend who was visiting our home, and it has been to me the dawn of a new life. From just reading "Science and Health with Key to the Scriptures" and the Christian Science literature I have been healed of constipation, from which I had always suffered. I also had to be careful what I ate, owing to the belief of a weak stomach, but now I can eat anything without any fear or distress. I used to be tired out after any hard work; now I can do the hardest kind of work without feeling fatigued. *

I am daily striving to overcome fear, resentment, and a quick temper, and know that if I follow faithfully in the footsteps of our Master I shall overcome these errors. There is not a Christian Science church near, so I study the Lesson-Sermons, which have been so lovingly provided for us by our Leader. I am grateful to the Christian Scientists who have been so kind in sending Christian Science literature to me and in helping me to understand the truth. My one great desire is to be a true Christian Scientist.

'(Miss) MABEL IRENE FOSTER, Fly Creek, New York.

I am writing this testimony with the hope that it will bring joy and gladness to many seekers for the truth who are still groping in the dark as I was at one time. I am grateful to God, to our great Way-shower, Jesus the Christ, and to our beloved Leader, Mary Baker Eddy, for the glorious truth which has been brought to the knowledge of mankind. When Jesus walked among men, as he prayed to the Father he said, "Thy word is truth," and our dear Leader, Mrs. Eddy, has given us a key to that book of truth, the Bible, in the Christian Science textbook, "Science and Health with Key to the Scriptures."

Christian Science came into my life when I was hungering and thirsting in a desert land where no water seemed to be. It has satisfied a hungry longing for a knowledge of God, which I had had for years. It has healed my husband of influenza and many other ailments. It has also healed me of many diseases, two of which were eczema and a very severe attack of dysentery. I have not words at my command with which to express my heartfelt gratitude for Christian Science.—(Mrs.) Bessie J. Jones, Washington, D. C.

Christian Science was first brought to my notice twelve years ago by a friend who was visiting in our home. At first because of intimate friendship I took the liberty of saying things that amounted to ridicule of what I thought or had heard Christian Science to be. This talk of mine or such criticisms as I made were met very kindly and sweetly. This friend was an earnest student and these things did not seem to move her, nor did she attempt to explain, seeing that apparently I was not ready for it. I began to observe that my friend read her Bible daily, also Science and Health. I was impressed by this fact and the earnestness shown. It was a rebuke to me as I did not read the Bible daily as she did. One day, when alone, I thought I would like to see what was so absorbing about this book, for I was not a little curious as to what it might contain. I began reading the chapter on Prayer and to my surprise could not find any fault with it, nothing to criticize. It was indeed beautiful and that which I really believed and what I wanted to know. I secretly rejoiced at the knowledge contained therein. I then knew I would read this book through if only out of curiosity.

I had been dissatisfied for a long time with the teaching of the denominational church of which I had been a member for many years. I could not find the peace of mind I sought, nor were the questions that kept recurring to my mind answered. I changed membership to a church of another denomination but I was still not satisfied. I was in this condition of thought when I first began to read "Science and Health with Key to the Scriptures" by Mary Baker Eddy. Still uncertain as to the truth of all that I was reading I could not lay the book aside nor could I accept all of its statements. But because I had an open mind, and honestly desired to know the truth, little by little the truth unfolded. There was a struggle for some time, but at last I was free from prejudice and the fear that I had lost God altogether. What I had lost was a sense of God as corporeal -as a big material man somewhere up in the sky. As a child I had often wondered who created God. When I learned that God is Mind I could understand that God is self-existent, that God as Mind had always existed. Not until I studied Christian Science was this question answered for me. Finally I could gratefully acknowledge that I was free from the old beliefs in which training and education had played so great a part.

With all reverence for the thought that "with God all things are possible" I went for my first treatment in Christian Science. In the first treatment I was healed of an abdominal weakness of some years' standing. A sweet sense of peace, comfort, and freedom came over me and I rejoiced. It was the peace that passes understanding. My husband became interested in Christian Science when he saw that I had been helped and healed. He was healed of rheumatism, tonsillitis, stomach trouble, and the smoking habit. The truth as taught in Christian Science has been our only medicine for twelve years.

I am very grateful for the protection we have had from accident, and for other blessings too numerous to mention. I am most grateful for the understanding of the Bible gained through the study of Science and Health which is indeed a key unlocking the treasures of the Scriptures, and that Christian Science is the demonstrable truth, available to all mankind. I am also grateful for the periodicals that come to us with healing. I was recently healed of a very disturbed state of thought by reading and studying a little poem in the Sentinel.

(Mrs.) HULDAH P. HOLMES, San Jose, Calif.

Signs of the Times

[The Protest of William James Against the Proposed Medical License Bill (1898).—From "The Letters of William James," Edited by His Son, Henry James]

In a recently published volume entitled "The Letters of William James" there is an interesting record of the protest which the noted philosopher made against the proposed medical license bill before the Massachusetts Legislature in 1894 and 1898. The letters on this subject are not given in full, but the extracts, together with the copious explanations given by his son, Henry James, who compiled and edited the letters, make Professor James' attitude perfectly clear. "Legislative license is sheer humbug," he wrote in a letter dated March 2, 1898, "-mere abstract paper thunder under which every ignorance and abuse can still go on. Why this mania for more laws? Why seek to stop the really important experiences which these peculiar creatures are rolling up? Bah! I'm sick of the whole business, and I well know how all my colleagues at the Medical School, who go only by the label, will view me and my efforts. But if Zola and Colonel Picquart can face the whole French army, can't I face their disapproval?-Much more easily than that of my own conscience!" In the following excerpt from the chapter containing the letters referring to this subject, the quotations are from Professor James and the comments are those of his son:-

James was not indulging in empty rhetoric when he said that his conscience drove him to face the disapproval of his medical colleagues. Some of them never forgave him, and to this day references to his appearance at the State House in Boston are marked by partisanship rather than understanding.

What happened cannot be understood without recalling that thirty-odd years ago the licensing of medical practitioners was just being inaugurated in the United States. To-day it is evident that every one must be qualified and licensed before he can be permitted to write prescriptions, to sign statements upon which public records, inquests, and health statistics are to be based, and to go about the community calling himself a doctor. On the other hand, experience has proved that those people who do not pretend to be physicians, who do not use drugs or the knife, and who attempt to heal only by mental or spiritual influence, cannot be regulated by the clumsy machinery of the criminal law. But either because the whole question of medical registration was new, or because professional men are seldom masters of the science of lawmaking, the sponsors of the bills proposed to the Massachusetts Legislature in 1894 and 1898 ignored these distinctions. James did not name them, although his argument implied them and rested upon them. The bills included clauses which attempted to abolish the faith-curers by requiring them to become Doctors of Medicine. . . . It was idle to argue that faith-curers would be able to continue in their own ways as soon as they had passed the medical examinations of the State Board, and that accordingly the proposed law could not be said to involve their suppression. Obviously, medical examinations were barriers which the faith-curers could not climb over. This was the feature of the proposed law which roused James to opposition, and led him to take sides for the moment with all the spokesmen of all the -isms and

"I assuredly hold no brief for any of these healers" [he argued], "and must confess that my intellect has been unable to assimilate their theories, so far as I have

heard them given. But their facts are patent and startling; and anything that interferes with the multiplication of such facts, and with our freest opportunity of observing and studying them, will, I believe, be a public calamity. The law now proposed will so interfere, simply because the mind-curers will not take the examinations. . . ."

The spokesmen of the medical profession were ignoring what he believed to be instructive phenomena. "What the real interests of medicine require is that mental therapeutics should not be stamped out, but studied, and its laws ascertained. For that the mind-curers must at least be suffered to make their experiments. If they cannot interpret their results aright, why then let the orthodox M. D.'s follow up their facts, and study and interpret them. But to force the mind-curers to a state examination is to kill the experiments outright." But instead of the open-minded attitude which he thus advocated, he saw doctors who "had no more exact science in them than a fox terrier" invoking the holy name of science and blundering ahead with an air of moral superiority.

"One would suppose," he exclaimed again in the 1898 hearing, "that any set of sane persons interested in the growth of medical truth would rejoice if other persons were found willing to push out their experiences in the mentalhealing direction, and provide a mass of material out of which the conditions and limits of such therapeutic methods may at last become clear. One would suppose that our orthodox medical brethren might so rejoice; but instead of rejoicing they adopt the fiercely partisan attitude of a powerful trade-union, demanding legislation against the competition of 'scabs.' . . . Pray do not fail, Mr. Chairman, to catch my point. You are not to ask yourselves whether these mind-curers do really achieve the successes that are claimed. It is enough for you as legislators to ascertain that a large number of our citizens, persons as intelligent and well educated as yourself, or I, persons whose number seems daily to increase, are convinced that they do achieve them, are persuaded that a valuable new department of medical experience is by them opening up. Here is a purely medical question, regarding which our General Court, not being a wellspring and source of medical virtue, not having any private test of therapeutic truth, must remain strictly neutral under penalty of making the confusion worse. . . . Above all things, Mr. Chairman, let us not be infected with the Gallic spirit of regulation and reglementation for their own abstract sakes. Let us not grow hysterical about lawmaking. Let us not fall in love with enactments and penalties because they are so logical and sound so pretty, and look so nice on paper."

["Habitation"—The Christian Science Monitor, Boston, U.S.A., Oct. 21, 1920]

A problem which has from time to time in the world's history assumed formidable proportions, is the housing problem. Cities, and even universities, at times seem so crowded as to deny a place to some of the people who desire to find quarters there. To one who has, in belief, experienced an unavailing search for a habitation in a large city, the words of the psalmist, "Be thou my strong habitation, whereunto I may continually resort," may seem very remote and impractical. But Christian Science teaches that no promise of God's ready, providing care is impractical or inapplicable, and that the harmonious solution of every problem is found in spiritual understanding of the spiritual reality that the material seeming denies. In Christian Science it is made clear that in the face of any conditions

whatsoever, in the face of no matter what prophecies of inflation, congestion, shortage, or lack, it is still true that God, Principle, is reigning, that the kingdom of heaven is present right now. It is always true that it is He "who giveth us richly all things to enjoy," for He is perpetually supplying His idea, man and the universe, with infinite good.

CO. 72 In divine Science, one does not reason from the social, 10% in industrial, or economic causes and effects of a material universe, and work from these to a wise course of action. One's reasoning starts and ends with the directing fact that God, Spirit, is All. Now the All, the omnipotent, omniscient, omnipresent creator, made all things, and "without him was not any thing made that was made." Moreover, it is self-evident that God, Mind, creates nothing unlike Himself, Spirit. Then matter was never created. Neither can evil claim existence. Nor were congestion, inflation, and shortage made in God's creation. God, or Truth, tells us that these have no existence when He declares, "I am the Lord, and there is-none else, there is no God beside me: I girded thee, though thou hast not known me." He who is girded, everywhere encompassed by God, cannot hear the false, blatant voice of matter, for he is hearing the still, true voice of the One only, against which there is nothing to strive. Mrs. Eddy puts it scientifically when she says, "A molecule, as matter, is not formed by Spirit; for Spirit is spiritual consciousness alone. Hence this spiritual consciousness can form nothing unlike itself, Spirit, and Spirit is the only creator. The material atom is an outlined falsity of consciousness, which can gather additional evidence of consciousness and life only as it adds lie to lie" (Unity of Good, p. 35). It is of this spiritual creation that we read in Genesis, "And God saw every thing that he had made, and, behold, it was very good."

Then in Christian Science one cannot accept as the real habitation the outward signs and structures of the cities built with hands. One must, since God made all, find his habitation, and all his needs, in Mind. That is, the first work of the metaphysician, the idea of Mind, is absolutely spiritual. It consists in understanding the perfection, presence, and substance of the spiritual creation, the only creation there is. As Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 492), "For right reasoning there should be but one fact before the thought, namely, spiritual existence. In reality there is no other existence, since Life cannot be united to its unlikeness, mortality."

With this reasoning, or spiritual understanding, the material conditions have absolutely nothing to do. Reversed, they are witnesses of Truth, but as sense testimony they cannot enter into, alter, or guide man's perception of the real any more than the appearance that the railroad tracks come together can deceive the engineer, and halt or deflect his onward course to his right destination. There never could be a time or condition when the place that God has prepared for those who understand His allness, is not present, available, proper, "without money and without price," wherein they will be "abundantly satisfied." and wherein they may dwell forever. In Mind's habitation, in the "house of the Lord," man lives and moves and has his being, and it is about this house alone that the Christian metaphysician reasons. He sees that he is searching spiritual understanding, the knowledge of God's completely good, unlimited creation, and he sees that he can admit as consciousness nothing that is not of God. Surely this is what Jesus meant when he said, "But seek ye first the kingdom of God, and his righteousness; and all these things shall

be added unto you." He himself, the master Metaphysician, found the tribute money and the loaves and fishes right at hand. Knowing the reality of God's universe, he proved to the disciples, who but dimly comprehended infinite Spirit, that the material need was met, for God always meets man's need in the way that man best understands.

Thus, dwelling in the knowledge of Mind's allness, man has the understanding to perceive his habitation in the place best suited to his usefulness and progress. There is no law against the operation of this law of God, nor against man's spiritual perception of it. Mrs. Eddy explains this as follows (Science and Health, p. 505): "Spiritual sense is the discernment of spiritual good. Understanding is the line of demarcation between the real and unreal. Spiritual understanding unfolds Mind,-Life, Truth, and Love,-and demonstrates the divine sense, giving the spiritual proof of the universe in Christian Science. This understanding is not intellectual, is not the result of scholarly attainments; it is the reality of all things brought to light. God's ideas reflect the immortal, unerring, and infinite. The mortal, erring, and finite are human beliefs, which apportion to themselves a task impossible for them, that of distinguishing between the false and the true."

[From "Miracle and Prophecy," by the Reverend W. F. Adeney, D. D., in The Hibbert Journal]

The first meaning of the English word "miracle" in the Oxford Dictionary is "marvelous event due to some supernatural agency." But here we have another word very difficult of definition-the word "supernatural." The eighteenth century notion of miracle as a breach of the laws of natureadopted by Hume-has been generally abandoned because it involves an unproved assumption. The more modest science of our own day declines to set any limit to the powers and possibilities of nature. An age that has witnessed the discovery of radium and X rays, and seen the invention of the wireless telegraph and telephone, would indeed be foolish if it pretended to say what could and what could not happen without any disturbance of the course of nature. Nor is this all; that bed rock of science, the theory of the uniformity of nature, is now recognized to be the result of an empirical induction, which by the nature of the case must be imperfect.

Hume's argument on the ground of probabilities may be irrefragable, so long as we grant his data and allow no more. But here another phase of philosophy comes to be observed. The sharp distinction between bodily and mental, physical and spiritual, has broken down. The materialistic conception of the universe advocated by Tyndall, Clifton, and Haeckel is giving place, under the influence of Bergson, Eucken, and other more recent and metaphysical thinkers, to the idea of mentality as the primary factor of existence; so that we must interpret matter in terms of mind, rather than mind in terms of matter, as the materialists had attempted. . . .

Then as regards the miracle in the New Testament, while the unique personality of Christ Jesus may well induce us to believe in the unique character of his actions, we can gather from his own teaching that he would not have this so completely without parallel as we have been accustomed to suppose. He conferred the gift of healing on his disciples. There are those among us who hold that he intended it to be practiced continuously, that it has only been lost by failure of faith, and that it might be recovered—and perhaps in some cases has been recovered—by a reawakening of this primary requisite.

[From Edward Sapir in a Review of Primitive Society by Robert H. Howic, as Reported in The Dial]

Evolution was in the air. Everybody felt that it would be perfectly splendid if we could find a primitive stage of thought from which we had "evolved." . . . Things finally came to such a pass that certain anthropologists grew nervous—especially such as had seen primitive man from a closer vantage point than the ivied seclusion of Oxford. They set about the task of testing out the laws. At first they made humble suggestions for revision, then they questioned the validity of the particular laws that had been "discovered" from time to time; now they are actually going to the length of denying the possibility of arriving at any laws, psycholog-. ical or evolutionary, that would explain primitive culture. . . . Unfortunately for the camp followers of anthropology, anthropology itself is now elaborately backwatering. It is itself rapidly drifting to the anti-evolutionary, historical method that it at one time affected to despise as an amateurish thing.

[From the London Express]

A great financier recently said: "The day when corporations could do business in the face of hostility on the public's part is at an end. Public opinion is the new great factor in commerce, just as it is in international affairs." . . .

Each of us strengthens or weakens this force by the attitude we take toward the great fundamental questions of our day. Those of us who are out of tune with the best in thought and feeling contribute nothing. That public opinion is growing in power is one more proof that humanity moves on.

[From The Congregationalist and Advance]

They greatly err who think the Plymouth colony was made up chiefly or largely of ministers, missionaries, and ecclesiastics. There was not a minister in the group, according to the canons of their times. They were carpenters, goldsmiths, dyers, printers, coopers, farmers. As manual workers they undertook to supply the primary needs of the colony through what their hands raised and made. They believed that while a man was raising grain or splitting wood or erecting a barn or hunting for venison, he could be honoring God, and by the thorough way in which he went about his task and by his fidelity to the common welfare be building God's kingdom on the earth. . . .

How singular it is that the Congregational churches, one of whose cardinal beliefs is the priesthood of believers, should, in the course of three hundred years since they went out from Anglicanism on that issue, have ceased largely to utilize laymen in conducting public worship and in preaching the gospel. The Methodists have far surpassed us in this respect. The Episcopalians and the Christian Scientists also put greater reliance upon and make larger use of unordained men in conducting the worship of the sanctuary. Many an outpost in these bodies is manned solely from Sunday to Sunday by laymen.

{From "Christ's Call to Business Men"—by Albert D. Belden in The Biblical World}

One great conception of his we cannot escape, for it fills the New Testament—the "end of the world." How sadly we have misunderstood that phrase! We have taken it all too often to mean the end of the globe—the destruction of the earth. The Greek word for world should have saved us from such a blunder. "Cosmos" has regained in our time its old meaning of order or system. Paul even uses it in certain

phrases (Gal. 4:2) to describe the Mosaic code or religious observance. Perhaps the word "epoch" is as good a translation as any. In this sense of the word there are repeated "ends of the world." Humanity is bound to organize its life, and until it organizes its "world" on Christian principles it can erect only "insubstantial fabrics" that must fall one by one till the kingdom of God brings the series to a triumphant close. The commercial interest is a useful one for punctuating this story of repeated failure. The epoch of slavery came to its end. The epoch of feudalism came to its end. The epoch of industrial competitive confusion is now approaching its end. Every "world" must end at last, till God's world arrives.

["Educational Reconstruction in Europe"-From The Survey]

"The great war had definitely accomplished at least two tremendous results in European education," says a writer in The Survey. "In the first place, it interrupted many programs which were looking toward the future and especially toward international comity and cooperation and so brought to light the need of just such programs. In the second place, it released large and largely unsuspected areas of idealistic energy into the educational currents of the world. Young people in the warring lands are awake as never before to the call of a new world. Education, along with all the other social institutions, is feeling the impetus of their needs and their demands. These needs and demands have been expressed at many notable conferences within the past year. . . . For example, at the Conference for International Reconciliation, held at Bilthoven in Holland, the peace of the world was stated as the problem of the education of the children of all lands. The teachers of France, in their recent congress at Tours, were told by Anatole France, the author and critic, that they held in their hands the future of France, and to that extent, the future of the world. At the great Public School Conference in Berlin, in July, the leading liberal educators of Germany met and laid the foundations of a new educational order in that nation. Above the havoc of war and the forces of reaction, such voices and plans are worthy of record here."

Dr. Elizabeth Rotten, editor of the German International Review of Education, writes in part as follows of the German conference mentioned above: "Out of all these discussions and committee reports, the consensus of opinion seemed to agree upon the following general interpretation of the new movement. Education in Germany must escape from class organization and become established in 'one class schools.' More important, however, than the form of a nation's schools is the spirit within them. If the general desire for education, or, at any rate, the seeds of a desire for a fuller life, are to permeate a whole people, the aims and methods, too, must be reconstructed and made the same for all. The constitution provides that the schools shall educate all for intelligent citizenship, personal and professional efficiency compatible with the traditions of the German people and conducive to a reconciliatory attitude among the peoples. The German schools must educate toward that higher form of nationalism that is not content with a culture developed in isolation, however splendid, but desires continuous interchange with other coun-To this end, 'civics' as well as 'industries' must be practiced in the schools.

"The accomplishment of these results will be possible, the conference decided, only when teachers and educators in the schools of all kinds are fully aware that they are

working, not in the grind of the machinery of schools, but in the great cause of the education of the people. Hence, all the old barriers between the various groups of teachers must be broken down. The German people must no longer suffer the existence of such barriers, which were particularly marked in the schools of Prussia. These barriers produced the breach between the so-called educated and uneducated,-a more fruitful cause of social discontent and misunderstanding than even the inequitable distribution of wealth,-since one small group was educated to command while the great mass was 'educated' to obey. 'One class schools' directed by teachers and educators imbued with the democratic ideals of the new Germany and preparing the children for skilled and intelligent participation in the national and international tasks of the new world: these are the elements of constructive planning resulting from this great conference."

[From Bulletin of the Intercollegiate News Service of Intercollegiate Prohibition Association]

The representative of the South African Temperance Alliance to the World Congress against Alcoholism, who is on a short tour of the United States to investigate the effects of prohibition, called at the headquarters of the Intercollegiate Prohibition Association this week and made the following statements:—

"In South Africa we are working to coordinate all of the temperance agencies in the four provinces of British South Africa, and all such organizations are now in our Alliance. At present we are working on a local option measure in an effort some or later to secure a direct vote of all of the people. Then we can combine the forces to get the proper law. Sentiment is rapidly changing and prohibition is now an issue. We really expect a new law in five years and prohibition in ten years. The colleges and universities are rapidly growing, and the students take a very keen interest and part in politics. There is a great need for some organization like the Intercollegiate Prohibition Association to come and inspire our students to organize against the alcohol traffic."

The Intercollegiate Prohibition Association expects to have a trained worker in the universities of South Africa within the coming year.

The Latin League against Alcoholism, which is organized among the students of Latin speaking nations who are attending American colleges and universities, is planning an active program for the current academic year.

Anti-alcohol activity is progressing among the students of Austria, Czecho-Slovakia, and Jugo-Slovakia according to current reports. Clubs are being organized in spite of the extreme poverty of the students, which of course tends to retard all normal student activity.

[Introduction to a Christian Science Lecture in Dublin, Ireland]

We are living in what has been called the scientific age, which means that mankind must know and understand things rather than merely believe them—must have actual proofs of statements before admitting them to be true. Mrs. Eddy founded the movement of Christian Science in 1866. Since then its growth has been remarkable and continuous, until now there is hardly a place in the civilized world where it is not known and practiced. And why is this? Because Christian Science presents proofs of its statements; it proves its faith entirely by its works.

When Jesus gave to all the world for all time this great promise, "He that believeth on me, the works that I do shall he do also," he plainly meant that all people, in all ages, who follow his teachings, could thereby heal the sick, cleanse the lepers, raise the dead, cast out devils. Christian Science is not a new religion nor a new creed. It is just the religion of the Christ explained and understood. It claims to be nothing more—it is nothing more. Simply the religion of Christ Jesus—a life to be lived in fulfillment of his teaching. The message of Christian Science is one of glad tidings and great joy, for it is bringing into sight that new heaven and new earth wherein dwells right thinking, and its whole activity may be summed up in the one immeasurable word, Love.

[From The Watchman-Examiner]

In military tactics there is an evolution called "marking time." It is analogous to marching. It involves the exercise of the same muscles in substantially the same way. The feet are lifted and lowered alternately just as if the men were walking. Seen from a distance a file of soldiers marking time might be supposed to be marching. But there is an essential difference between the two things. Marching means going forward. In marking time the feet are set down again in the exact place from which they were lifted. There is no advance made. The line may mark time for a day without going forward a yard. There is motion, but no progress. The distinction between marching and marking time is not always so carefully made as it should be. There is a good deal that passes for marching that is nothing more or other than merely marking time.

There are Christians not a few who would be mightily surprised to have preferred against them the charge of marking time, but who would be hard put to it to disprove the charge if it were made. Why, are they not "active" in church work? always in their place at the church service? teachers in the Sunday schools? members of various societies, guilds, committees, generous with their money? All this, and more, may be granted without debate. Yet a qualitative analysis of their life, if such could be made, would probably show that there is no advance, no growth in breadth of vision. no increasing depth of spirituality. . . . They are going through the motions of Christian service, but they are not going forward. Marking time, that's all. It might be an interesting though possibly for some of us humiliating experiment, to attempt some such qualitative analysis of our own lives and our service; to try to discover whether in the midst of multitudinous things done in a year or a given number of years, we ourselves have really advanced or grown in the essential of true discipleship.

One of the crowding temptations of the present day is doubtless a tendency to be satisfied with surface appearances. Organization counts for so much; wheels have such evident value; the gearing of machinery seems so important. And when we have effected the organization and started the machinery, and, like Budge and Toddy, "see the w'eels go round," we are delighted, and it is easy to believe that something is being done. But we need to remember that the test of the mill is not the sight or sound of the whirring wheels, but the grist that it turns out. And the test of the Christian and the church is not motion, but getting somewhere, is not busyness apparent, but business done.

[English to be an Official Language in Palestine]

The Zionist organization states, it is officially announced in Palestine, that English, Arabic, and Hebrew are to be recognized as the official languages in that country. All government ordinances, official notices, and forms will be published in these languages, and correspondence will be received and

acknowledged by government departments in any one of them. All railway and road notices will also be issued in the three languages, which will in like manner be used in municipal and other offices where there is a considerable Jewish population. These districts will be termed tri-lingual areas. . . . It is also announced that new Palestine postage stamps have been issued with the word "Palestine" in Arabic at the top, in English in the center, and in Hebrew at the bottom.

[From Binghamton (New York) Press]

There is a trend in some of the churches toward the revival of spiritual healing. This proves two points very conclusively: first, that mankind is still looking for the complete fulfillment of the promises contained in the Bible, and second, that despite the fact that there are to-day several hundred Christian sects, many have not found a satisfactory religion. Jesus said, "Ye do err, not knowing the scriptures." This tells plainly that the way of righteousness, the way to right living, lies within the Bible.

Mrs. Eddy, the Discoverer and Founder of the Christian Science movement, has named her textbook, "Science and Health with Key to the Scriptures." The adherents of this cause claim that the Bible, studied in connection with this book, becomes illumined, understood, and its teachings are made practical. Many to whom the Bible was a closed book, inconsistent and difficult to comprehend, are now its daily students and find therein a panacea for every discord.

Church Notices

4 4 4

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is

the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "The secret place of the most High," "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

♦ ♦ ♦ Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Scntinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

FOR some time I have wanted to tell you how much help I have received from the Monitor personally and as a teacher. A recent experience reminded me of this privilege. After visiting a class in journalism, I stopped to compare notes with the instructor. Among other things he said: "I do most of my teaching from good models, and the best model I find in The Christian Science Monitor. In headlines, composition, style, tone, ethics, it sets a pattern which I can always place before my boys." Other appreciative words followed which I cannot set down verbatim, but it made me so happy to hear this from one who is not a Scientist that I must pass the good word on to you.

THE CHRISTIAN SCIENCE MONITOR, the international daily newspaper, is a wonderful unfoldment of progress toward enlightenment of the world. I am extremely grateful for the education received through reading this paper. My schooling was not very thorough and I never attended college, but the Monitor has supplied this need. The conduct and aspirations of the different European and Asiatic nations are to me subjects of much interest and, although such countries are a long way from my home in western Canada, reports of proceedings in their legislatures, speeches by leading men, and actions of governments—truthfully given in the Monitor—have broken down the sense of distance and in many instances replaced a feeling of despisal with one of toleration and respect. I hope the time will soon come when The Christian Science Monitor will be called on the streets of every large city in the United States and Canada.

NUMBER 18

The Goad

JAMES L. BRUCE

PHE word "goad," in its usually accepted sense, refers to 1 a pointed stick used to urge an animal to greater activity. A man, as we seem to know him best, with all his appetites and weaknesses, is but a more refined animal, and often needs more urging than his kin. Although the prod in this second case may not be so grossly material and may even be entirely mental, yet its purpose is the same. Even as a man enters the world of spiritual endeavor he may still be actuated by very material motives, and only as he becomes occupied in purely spiritual attaining is the mere beacon light ahead sufficient to offset what has been, in some form or other, his constant companion. If at this point he should make an inventory of his motives he could well determine how far he has traveled on the road of eternal progress-how much more often he does right because of a worthy motive than he refrains from doing wrong because of the unhappy consequences that will ensue. He begins to understand, too, that the omnipresent God is omniactive and that there is, in fact, no other activity. The fullness of God includes complete activity.

Do we not, however, at this present stage, all seem to need more or less prodding, and principally more? Many would be indolent were it not for their so-called physical necessities. Others would be inactive were it not a matter of pride, pleasure, requirements of a family, and scores of other reasons. Would even our Christian Science textbooks be read so much and studied so faithfully by many were it not for the tenacious beliefs of some material problem?

Then there is another curious phase in this case of human nature, and that is its recognition of its own frailty, so that it often seeks a goad to compel it to right action. That man is the exception who has not said at some time or other, "Just make me do it." Then, too, he may even provide conditions that should he fail in his good intentions, he will be coerced until he returns to the desired standard.

Now if there be a universal "goad," that of the New Year may lay claim to the distinction. There is scarcely a man, or woman, or child, who has learned the difference between right and wrong, who has not taken part in resolutions, either to do or abstain from doing certain things during the coming year. Many an eloquent and sincere sermon has been based on the "clean, white page," which is not to be marred by blot, but rather to be adorned by marks of achievement in a journey heavenward. The deplorable part in this state of affairs is, that many of these resolutions are but copies of others made before in the same spirit and with equal determination that they should be kept, but are already broken. Practically the same sermons have been preached, and yet no permanent healing has come to those who in varying degree have longed so for it. Is it the method or the motive that is at fault, or is there some other reason why these conscious efforts have failed?

Mary Baker Eddy with her keen insight into human na-

ture, with her ability to express what she sees and her fearlessness in doing so, tells us what the error is. On page 279 of "Miscellaneous Writings" she says, "It is the love of God, and not the fear of evil, that is the incentive in Science." Again we read in Miscellany (p. 357), "The only incentive of a mistaken sense is malicious animal magnetism,—the name of all evil,-and this must be understood." And in "Science and Health with Key to the Scriptures" (p. 454): "Love for God and man is the true incentive in both healing and teaching. Love inspires, illumines, designates, and leads the way." There it is! It is Love and Love only that heals. What is that person doing who seeks to make a goad of the New Year, other than trying to accomplish something by determination-human will power? This is aided and abetted by whatever mesmerism can be assured by fixing a time in the future when the will is to be put in operation, living perhaps in greater license in the meantime. What is the specter of the "clean, white page"? This beyond doubt is self-mesmerism or animal magnetism. It is a malicious goad of a mistaken sense. It is all wrong and does not permanently accomplish the "reform" or "healing" for which a man has been striving. To reiterate, it is but human will, which the student of Christian Science knows to be capable of all evil. The desire is good, but the means, that of self-mesmerism, which has been employed, and the seeming fact that one has not grasped the true incentive, lead away from the very Truth and Love through which the victory is to come.

Another great weakness involved in these prospective reforms is that one looks toward the future instead of recognizing the present as the time in which his healing is to be accomplished. All the good there is is to-day, now. It is not to be set in operation by and by. Good is ever operative. Of course all good is not known to human consciousness, and each one can manifest more, but this must be by unfoldment and not by fiat. Although the methods that have been used are so radically wrong, being based on a misconception of the true incentive and true condition, the desire which has prompted the action should be a matter of encouragement. The striving and effort are at least a witness to the fact that man recognizes something better to be attained, though this recognition may be vague and the effort to improve futile.

So the question comes up: How can this recurring season, this universal reminder, be made a time of intelligent growth and unfoldment? Clearly it must be along the line that Mrs. Eddy indicates—through the greater realization of divine Love, that it is ever present and that it is now active. Unfoldment to-day makes possible greater unfoldment to-morrow. The present season may be made, too, the occasion for reviewing the past year. One should rejoice at some seeming dross that has been consumed, be humbly grateful for what gold has been refined, and thus gain encouragement for time to come. But should the picture of the past year look discouraging, do not bemoan that which is gone. It is better by far to follow Longfellow's admonition: "Look not mournfully into the past,—it comes not back again; wisely improve the present,—it is thine; go forth to meet the

shadowy future without fear, and with a manly heart." Yes, always "wisely improve the present" and the future will unfold rightly. As the flowers open to the rain and sunshine, so do we unfold in Love, as our Leader has enjoined us. But as flowers do not grow by resolution, neither can we unfold by accepting the New Year as a goad but rather as an opportunity for unfoldment in divine presence.

The Vision of the Practitioner

GEORGE C. FRANKLIN

TESUS said in the allegorical language of the East, "First J cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." Could an illustration be given which would show mortals more clearly the modus operandi by which they would reach the altitude to heal the sick than does this one sentence? Clearly the Master taught that purification of thought results in spiritual growth and that spirituality alone would enable the student to heal the sick; and when Mary Baker Eddy, after demonstrating the power of divine Mind to heal the sick, began cautiously to impart this ability to her students she said, in "Science and Health with Key to the Scriptures" (p. 411): "My first discovery in the student's practice was this: If the student silently called the disease by name, when he argued against it, as a general rule the body would respond more quickly,—just as a person replies more readily when his name is spoken; but this was because the student was not perfectly attuned to divine Science, and needed the arguments of truth for reminders. If Spirit or the power of divine Love bear witness to the truth, this is the ultimatum, the scientific way, and the healing is instantaneous." The spiritual altitude which Jesus had reached enabled him to see man as the image of God and not as presented by physical sense-mortal, sinning, and sick. Then the greatest thing that any person on this earth can do is to gain spirituality. Most Christian Scientists not only admit this as true, but are striving to make every incident of their lives add to their spirituality, and they find that, like turning the snowball in the snow, their very desire for spirituality is a most effectual prayer; that like does attract like and that a spiritual thought brings manna from spiritual sources.

Jesus made a man's ability to heal commensurate with his spiritual understanding, and for that reason the student, while keeping himself as much as possible from compromising with error in any way, strives above all else for spirituality of thought. If the spiritual understanding upon which Jesus rested his demonstration enabled him to see the perfect man, conversely, the farther one got from the purity of this teaching the less ability to heal would he possess; but right at this point must one be patient and charitable, whether the lack of vision is with himself or another. The beginner who needs "the arguments of truth for reminders" may work much harder than a student who sees from a higher spiritual plane, but in the Scriptures we read, "Out of the mouth of babes and sucklings thou hast perfected praise," and that one who to-day must work or feels that he must, from the standpoint of arguing against the reality of all forms of material law, has no more reason for discouragement than the one who has but started to climb a mountain should have, because he cannot see as correctly the panorama of lakes and plain as the one who has reached a higher elevation. Jesus "was in all points tempted like as we are" and the suggestion of limitation came to him to be destroyed just as it has come to us.

However, we must watch lest we be satisfied with an occasional demonstration and fail to prepare ourselves against the greater demands that will certainly come upon us as they did to Jesus' immediate disciples when they failed to heal the epileptic boy and were told that their failure was the result of their unbelief.

If we are guiding a child's growth we are very careful to avoid anything that might suggest an impure or sensual thought, a dishonest or untruthful motive; so in our spiritual growth, our mental food must be pure. As we read in Matthew: "Every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old," Every line of mental activity is an education out of the limitation of mortal mind; music, mechanics, mathematics, show that it is only by practicing painstakingly the right that we overcome the wrong. The vision of the child student of mathematics is not the vision of the school graduate; but there is absolutely no ground at any time for criticism. Correction? Yes. Encouragement, loving helpfulness? Yes. But there is no place in the thought of a spiritual thinker for mere human criticism, malice, prophesying failure, or self-gratulation.

The student who is looking in mortal mind for a cause and delving in the speculative as to the history of discord needs to be lovingly led to see that Principle alone is activity. The one who is playing upon words by thinking that "hard thoughts cause gallstones" or that "cold thoughts cause influenza" needs to be shown that such parodies on Christian Science should be left in the barren soil of nothingness from which they come, and never watered with the fear of childish belief; but better the effort to heal even from such extremes as this, than the pharisaical dry rot of self-complacency. Whenever the student ceases to progress he has ceased to follow what Mrs. Eddy says in Science and Health (p. 233): "Every day makes its demands upon us for higher proofs rather than professions of Christian power. These proofs consist solely in the destruction of sin, sickness, and death by the power of Spirit, as Jesus destroyed them. This is an element of progress, and progress is the law of God, whose law demands of us only what we can certainly fulfil."

Elias

GLADYS HAYWARD

In the four gospels we find references again and again to Elias (the Greek form of Elijah) probably on account of the prophecy in the last chapter of the Old Testament, where Malachi understands God to say, "Behold, I will send you Elijah the prophet before the coming of the great and dreadful day of the Lord: and he shall turn the heart of the fathers to the children, and the heart of the children to their fathers, lest I come and smite the earth with a curse." In the New Testament, the disciples asked Jesus, "Why then say the scribes that Elias must first come?" With the prophecy and the interpretation of the scribes before us it is easy to appreciate Jesus' advanced spiritual understanding of the Scriptures in his answer, "Elias truly shall first come, and restore all things."

Now from history we know that the Jews looked in vain for a reappearing of the material Elias; so what can Elias be that he must come and "restore all things"? In the Glossary of "Science and Health with Key to the Scriptures," on page 585, Mary Baker Eddy defines Elias as "Prophecy: spiritual evidence opposed to material sense; Christian

Science, with which can be discerned the spiritual fact of whatever the material senses behold; the basis of immortality." The kernel of this marvelous definition seems to be, "Christian Science, with which can be discerned the spiritual fact of whatever the material senses behold." After pondering the depth of this definition we can say with Jesus, "Elias truly shall first come, and restore all things."

The definition of Elias makes us understand some of Jesus' hard sayings. We see how he discerned the spiritual fact of whatever the material senses beheld. Take for instance his words, "The kingdom of God is within you." Now we know he did not mean that a sinning, sick mortal was in the kingdom of heaven, but he looked beyond what his material senses beheld and discerned the man of God's creating -and he knew there was no other-right where the material senses beheld an imperfect mortal, and then with what positiveness he could say, "The kingdom of God is within you." And what did that do for the so-called mortal? The blind saw, the deaf heard, the lame walked. It seemed strange when he was so persecuted that he could say, "My yoke is easy, and my burden is light." If Satan told him he was having a thankless, weary task, he a true metaphysician reversed the lie, knew that as the manifestation of infinite good he reflected all good, which contained all joyousness and happiness.

Jesus is our example, and are we, like Jesus, letting Elias reappear in us? Are we letting Elias restore all things for us? Are we consecrated enough to attempt to prove that we are now in the kingdom of heaven by discerning "the spiritual fact of whatever the material senses behold"? It is certainly the work of the devil that tempts us into believing that the kingdom of heaven is either in a future world or next week. One belief is as fatal as the other.

It has been aptly said that discouragement is laziness or mental weakness. Now we do not need to give in to such a suggestion, for we know that where the material senses behold a discouraged mortal, right there is the expression of divine Mind manifesting courage, strength, and true ambition. Are we afraid to give up the material sense of man? Remember the foolish virgins who slept with no oil in their lamps—who returned to a material sense with nothing to illumine its darkness. Of course, they could not behold the bridegroom.

We are going to lose nothing by this turning, but we shall gain a great deal. Mrs. Eddy says in "Miscellaneous Writings" (p. 60), "Every material belief hints the existence of spiritual reality; and if mortals are instructed in spiritual things, it will be seen that material belief, in all its manifestations, reversed, will be found the type and representative of verities priceless, eternal, and just at hand." Now the material creation is the counterfeit of the spiritual creation, and, as in our workaday world, we know that no counterfeit equals the original. Who would take counterfeit money in preference to national currency? Even so the counterfeit earth is not to be compared with the original, the earth of God's creating, "priceless, eternal, and just at hand." His creation knows no age or blight but is complete, pure, beautiful, and forever so.

After studying the definition, it is interesting to read the life of Elijah. One is impressed with the way he overcame seemingly insurmountable obstacles. The result of his persisting in the discernment of the spiritual fact in spite of sense testimony is illustrated in the way he ended the drought which had tormented Israel for a long season. Casting himself down on Mount Carmel he sent his servant to look toward the sea, but the servant returned with the report,

"There is nothing." Did Elijah become discouraged with sense testimony? No. He knew he reflected all God's strength, and he said to his servant, "Go again seven times." And the quaint Scriptural words continue, "And it came to pass at the seventh time, that he said, Behold, there ariseth a little cloud out of the sea, like a man's hand. And he said, Go up, say unto Ahab, Prepare thy chariot, and get thee down, that the rain stop thee not. And it came to pass in the mean while, that the heaven was black with clouds and wind, and there was a great rain."

Christian Science does fulfill the Scriptures, for whatever the "great and dreadful day of the Lord" may be, Elijah has come before. No matter what the direful experience, we know it is but the counterfeit of God's ever present goodness. Thus as we persist in seeing the spiritual fact of harmony, discord will melt away and "he shall turn the heart of the fathers to the children, and the heart of the children to their fathers," and the earth cannot be smitten with a curse to those who let Elias "restore all things," for peace is the fruit of spiritual perception.

"Because God exists"

DOROTHY ROBERTS

MATTER cannot change the eternal fact that man exists because God exists," writes Mrs. Eddy on page 544 of "Science and Health with Key to the Scriptures." All there is to matter is the supposition that it can do what, as Mrs. Eddy here declares, it cannot, and that is, change a fact. This supposition that there can be a sustainer of existence other than God, Spirit, is manifest to itself as money, food, sleep, shelter, which can never become substantial, but are only the way sustaining cause seems to the supposed mind which is not God. Just as God is thus counterfeited, so His oneness with effect, man, is counterfeited, and we behold the universal belief that there is a kind of man who continues to exist,-be he saint or sinner, gross materialist or ascetic intellectual,-because money is, because sleep and food and shelter are. An individual can, such is the belief, only preach a sermon, write a poem, or invent an aeroplane,-engage in those activities which the human mind classifies as primarily mental or even spiritual, -only as he refreshes his brain with sleep, builds up his tissues with food, and fills his purse with earned or inherited money; and a nation must depend upon coal and climate and grain products if it is to survive.

What a man calls consciousness is often a network of preoccupations with that which he is one with, matter. It reverts with wearisome repetition to a round of trivial plans and anxieties, counts the days until the next pay envelope, figures the interest on an investment, already many times figured, prospects on the probabilities of a rise in rent, debates on what it shall have for lunch, struggles to get itself up in the morning and to bed at night, and snatches eagerly and wistfully at the possibilities of prolonging this sort of existence by diet, exercise, or even by the transference of glands from monkeys to men. In the national consciousness, so called, is a similar reversion to supposed cause, matter, a similar anxiety over the nation's lunch and its investments, and fearful speculation on what would happen should the "natural resources" of the country become exhausted.

What appears to-day as distressing shortages of individual and national resources is only the compulsion in thought of the truth about the infinite source of existence revealing the inevitable finity of the false supposition about it.

How is the student of Christian Science to think when

confronted by this discovery and the efforts of the adversary to postpone or thwart it? Obviously he cannot join in the seemingly increased absorption with the human sense of food, clothing, and housing which he finds in what he reads and hears, and, if he is not watchful, in what the human mind claims he thinks. He cannot share in but must assume the responsibility for healing the fear that the apparent diminishment of "things" in the world threatens existence itself. To the degree that he has accepted Christian Science he must be "dead with Christ from the rudiments of the world;" but what does this mean? He may think he sees clearly that matter is not the essential condition of living, he may conscientiously declare that God is the source of supply, of life, and yet find his "Lord, I believe," quickly followed by the human cry, "Help thou mine unbelief;" that is: Man exists because God does; yet I must be fed and warmed, I grow old, nations decline and nations fall. How are these things to be remedied by spiritual understanding? Closer reasoning may reveal that this question is due to the fact that he has not really seen the nothingness of matter's claim to be the sustainer of existence, so long as he continues to cherish a man with needs which presuppose this claim. The man who exists because God does, is not the bundle of appetites, monotonies, and anxieties which the human mind calls man, and this sense of man can find no support in Principle, Love. Only confusion can result from the effort to base demonstration on the supposition that God, Spirit, creates a man with material needs.

Obviously, then, it is the duty of the student of Christian Science to discover the man who is sustained by God. Mrs. Eddy gives us the following definition on page 591 of Science and Health: "Man. The compound idea of infinite Spirit; the spiritual image and likeness of God; the full representation of Mind." Since, then, this "man" is the "full representation of Mind" which fills all space, it is with his needs only that we can be concerned. It is impossible to conceive of the "full representation of Mind" being conscious of shortage. He does not know matter, and that is all that can be scant. There is as much Mind as there always has been, and no condition can possibly arise which can lessen infinity or man in His image.

As absurd as the supposition that the human sense of man has God as its source, is the supposition that God's real man is dependent in any degree upon material conditions, so called, for life and activity. A beginner in the study of Christian Science knows that his ability to give a treatment is not due to how much money he has in the bank, or how much he has slept the previous night, or what he has had for dinner, or how old he is. One would never think of saying, My thought of God is six years old, or sixty. Yet the consciousness of God is all there really is of man. The consciousness of God is neither immature nor decrepit, and therefore knows no fear of these supposed conditions. Neither ennui nor repetition enters into the activity and experience of man, for they imply a limitation of resources which he, because of his relation to God, can never know. The "compound idea" of God does not go to sleep or wake up, as mortal sense knows these conditions. At the very moment when this sense argues that man must sleep, man continues to represent Mind fully, and Mind does not sleep. The growing recognition of this fact will lessen the seeming need of sleep and free one from the bondage which comes of accepting the discouraging suggestion that at times one must compromise with matter. The same is true of food. We can never forget that, even while we seem to be conceding to the belief that food sustains life, nothing but belief concedes,-man never does, and if we return constantly to our definition of man we understand why.

Though nations have sprung up and disappeared, the truth that nation as idea exists because God does has never been changed. It is complete and unimpaired and in proportion to its cognizance of this fact will a nation survive, for the knowledge of Principle constitutes the only inexhaustible "natural resource" of a nation. As the Christ, or the truth about man and nation displaces the supposed consciousness of something other than God, the so-called needs of this "something other" will disappear in nation and individual, because man does not have these needs. When we speak, then, as we often do, of our human needs being met or supplied, we really mean that the belief that there is a man who has such needs has been to a degree forever destroyed by a better understanding of the nature of God's idea. A demonstration of supply, then, means not the possession of matter where it has been lacking before, since there can be neither more nor less of that which is always nothing; but it means more understanding of the truth that man exists because God does and less belief that he exists for any other reason. With some understanding of this the student of Christian Science can answer with joy and certainty the old questions. now asked more insistently than ever before, What is man? and what does he live for? as Mrs. Eddy does on page 165 of "The First Church of Christ, Scientist, and Miscellany." where she says: "As an active portion of one stupendous whole, goodness identifies man with universal good. Thus may each member of this church rise above the oft-repeated inquiry, What am I? to the scientific response: I am able to impart truth, health, and happiness, and this is my rock of salvation and my reason for existing."

Perfectibility Is Scientific

LEONARD ANN

AN there be anything more encouraging than to become Conscious of the fact that there is a law of happiness. that the attainment of this law is not a question of chance or uncertainty, but that perfect happiness can be obtained just in proportion to our desire and willingness to recognize the Science of Christianity, and to work with the knowledge that there can be no fortuitous circumstances, no good or bad luck, but simply the reward of correct understanding bringing about results as certain and as sure as the answer which must follow the correct working out of a mathematical calculation? What an incentive to the seeker for Truth when the fact dawns on him that progress is in direct proportion to his faithful adherence to the facts of Life which he is perceiving. The work of the Christian Scientist is to watch and pray, to know that perfectibility is scientific and the demand of God to man, that nothing short of this exact standard understood, accepted, meditated upon and daily and hourly acted upon can bring to bear the power of Truth which will scientifically destroy error in the innumerable forms in which it seeks to present itself as reality.

Let a man commence the day with the determination to keep before him the fact of man's spiritual perfection, and an equal determination to act upon this fact and make it practical, and he will find that he is measuring his thoughts and actions by a higher standard than he had before thought possible; then there will be a rejection of much that does not measure up to this perfect standard. As this process is faithfully and consistently held to, the metaphysical uncovering of error and the destruction of

both itself and its effects progresses in direct ratio, and the results are apparent in advancement based upon understanding, where every step is sure and certain and there is no return to past mistakes, for there can be no loss of that understanding which has been earned through experience put to the test and bearing the fruits of proof.

The statement of Jesus, in the Sermon on the Mount, "Be ye therefore perfect, even as your Father which is in heaven is perfect," or as with even added emphasis it appears in the following form in the American Revised Version of the New Testament, "Ye therefore shall be perfect, as your heavenly Father is perfect," is crystal clear and the practical operation is plainly pointed out by Mrs. Eddy in the following passage from "Science and Health with Key to the Scriptures" (pp. 476-477): "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." This loving demand is really a metaphysical necessity, and in proportion to its acceptance as such, and the faithfulness with which the endeavor is made to bring all thoughts into line with this perfect standard, will health, joy, happiness,—the attributes of God, be expressed in our daily experience.

Surely there can be no more or less, no near enough, no condonation or excuse. Christianity being Science, must be exact, and that which is the outcome of God, who is unchanging Love, can only work for good, can only help and protect, and bring about those conditions which with infinite tenderness and gentleness lead along the path of individual spiritual advancement. Perceiving the operation of this law of Love, the seeker for Truth is no longer an optimist in the ordinarily accepted sense of the word, for he has ceased to believe in a law of chance, and although the substanceless beliefs called optimism and pessimism may for a time continue to present themselves for acceptance, it is found that the only real optimism can be that which is founded on the metaphysical fact of the allness of God, and man in His image and likeness. This understanding can only be obtained by individually working out one's own salvation with faithful persistence, earning and deserving each step of progress until all doubts and fears are relegated to the past and in their place are found health, happiness, and the knowledge of man's dominion over all the earth.

[Written for the Sentinel]

Teach Me Thy Will

KATE FALLS

THERE was a time I loved to tread
A mortal way,
But now, O God, teach me Thy will
Day after day.

Teach me to know Thy will,
That I may always see
The good in all
Reflected, Lord, from Thee.

Teach me to live Thy will, In service to mankind, Treading the way the Master trod Governed by perfect Mind.

Teach me, O God, to say,
No matter what may come:
Not my will, my mortal way,
But Thine, be done.

Causation

BABBETTE LEAVY

F one stops to analyze what we may seemingly have given reality to as causation, it will be found that effect has been taking the place of cause, and thus, the beginning from a wrong premise has led to a false conclusion. Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 566), "As the children of Israel were guided triumphantly through the Red Sea, the dark ebbing and flowing tides of human fear,-as they were led through the wilderness, walking wearily through the great desert of human hopes, and anticipating the promised joy,—so shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God." As we study Christian Science we find that there is a rock, a sheltering place where we can be safe from "the dark ebbing and flowing tides of human fear," and that is in the understanding that God, good, is causation. Now let us see how that fact is going to solve

Suppose that in our home life a member of the family has seemingly had an experience in which anger is asking us to believe in its reality. Do we become affected by it and believe it "causation"? By so doing, it would not be helping, but adding a heavier burden to bear upon our brother man, and so we come back to our cause: God, good, is power, good is action. Is anger an emanation of good? No; therefore it is not an effect; then since necessarily anger is not an activity of good, let us mentally declare that anger has no power, no Principle, no action, has no voice, is therefore speechless, and we have no ears to hear it. God, good, is all that governs, and there is nothing but God, nothing but good.

Have we ever considered how subtly misery seems to act? We listen to a sad tale in which our brother seems to be a victim. Whence came misery? What caused it? Suppose you had a dream in which you lost all that you held dear, and you were going through a seemingly hard time, would not some one in the room try to rouse you out of that mesmeric suffering? He would not try to go into your dream and push this scene from your consciousness, but would awaken you from this false dream world in which you found yourself, and so bring you back again to your normal state and you would be grateful for being lifted out of suffering. In this way we can at all times lovingly show that since good is causation, there can be no misery, no evil, no sorrow.

Now let us see how the belief of poverty seems to act. Poverty implies a lack or need. The business man will tell you his business is material and he lacks sufficiency. Through business laws he will tell you demand and supply are not always one as cause and effect, but when we come back to Principle, what is real law saying? Divine Mind, the Principle of all knowledge, is unfolding perfect, complete, pure ideas to man, and man understands perfectly these true, eternal facts which are presented to him, and instantly reflects them, thus becoming a law of success to himself. And so we can go through the whole category of human beliefs, and by replacing them with eternal truth, can solve problem after problem. We do not have to be afraid that our treatment will not be effective. We have the God of the whole universe behind it, and let us become children, "heirs," of God, of good. There is a perpetual demand and supply. Let us be grateful for this and give to our King the "glory and dominion for ever and ever."

The New Year and Good Intentions

THE first of January might quite legitimately be termed the day of good intentions. But though the morning may find the world full of hope, the evening is apt to be the evening of disappointment. Paul himself provided the motto for the almanacs of the first century, and, for that matter, of every succeeding century, when he wrote, "For the good that I would I do not: but the evil which I would not, that I do." The reason of this is very simple, if the world in its hurry would only stay to think. It is that mankind in general has no scientific standard of right and wrong. It is guided by its emotions, and its emotions are bound to play it false, for they are themselves nothing but a product of the material senses. Thus the individual attempts to approach Spirit through the avenue of the senses; and he ends, as Mrs. Eddy says, on page 360 of Science and Health. in the hopeless effort of endeavoring to follow two models: "If you try to have two models, then you practically have none. Like a pendulum in a clock, you will be thrown back and forth, striking the ribs of matter and swinging between the real and the unreal."

There is the solution of the whole problem. When a man has once grasped the very simple fact that Spirit is the only reality, he has placed his hands upon the clue which will guide him in safety amidst all the windings of the human labyrinth. He will have acquired that power of right reasoning or righteous judgment which will enable him to distinguish infallibly between good and evil. There on one side of him will lie the narrow road of sensual restriction which leads upward to the spiritual goal, and, on the other, the broad road of self-indulgence winding down into the valley of the shadow of death. And in the bitterness of the struggle the meaning of another saying of Paul's will become extremely clear to him, "O wretched man that I am! who shall deliver me from the body of this death?" Paul, however, had fought the fight long enough and honestly enough to know that Principle helps those who help themselves, so that he was one day to strike a note of triumph in his struggle. "I have fought a good fight, I have finished my course, I have kept the faith: henceforth there is laid up for me a crown of righteousness."

To any one who really understands what this means, the good intentions of New Year's day become just the same as the good intentions of any other day of the year. Real good intentions are those taken at a moment when Truth has become visible, however mistily, and they have nothing whatever to do with some fleeting emotion stirred by the human senses. Such good intentions have no special virtue because they are taken on some particular day; being scientific they are true intentions, and belong not to an hour, but exist until they are fulfilled. The good intentions, in other words, which are scientific, are spiritual and are lasting; those which are destroyed through the disappoint-

ment of the failure of the moment are purely sensuous, they are of the flesh, and are of the stock of those carnal beliefs of which Mrs. Eddy writes on page 263 of Science and Health, where she says, "Carnal beliefs defraud us. They make man an involuntary hypocrite,—producing evil when he would create good, forming deformity when he would outline grace and beauty, injuring those whom he would bless."

It is perfectly easy to see how purely material are those good intentions which come with the morning and fade with the evening. To begin with, they are based on some idea of time, which is itself an entirely material conception. The man who is fighting to understand eternity has no time to waste on the suggestions of finiteness, and sees one day just as another, as an opportunity to learn more of Principle. This constitutes his effort to discover Truth, and in his success in the pursuit of Truth, as Christ Jesus explained, lies his freedom. Now in such a pursuit, to-day or tomorrow can be nothing. Imagine a great inventor or a great philosopher who sat down on the first of January to solve a problem, and failing by bedtime gave it up until the first day of the following year. The man who is in pursuit of absolute Truth is wrestling with a greater and more complex problem than all the great inventors and philosophers who have ever attacked physical or humanly intellectual problems: he is wrestling with sin in himseli, and with the world's hatred of Truth, and he cannot spare a day, much less three hundred and sixty-four days from his labor. "I must work the works of him that sent me, while it is day: the night cometh, when no man can work," Christ Jesus said. And, just in the same way, Mrs. Eddy wrote, on page 2 of the Message to The Mother Church for 1900, "The right thinker works; he gives little time to society manners or matters, and benefits society by his example and usefulness. He takes no time for amusement, ease, frivolity; he earns his money and gives it wisely to the world."

He, then, whose good intentions are something more than merely sensuous and ephemeral, realizes that it is failure, and not the effort prompted by Truth, that is of the moment; and that, such being the case, he must meet failure as its master, and, instead of being worsted by it, and putting off the renewal of the struggle, close with it again, at once, in the effort to overcome it. Then his good intentions become a sledge hammer of victory, for it is certain that evil must yield to Truth when it is persistently and unflinchingly attacked. This is, of course, presuming that the attack is scientifically carried out. Good intentions which are mere reflections of ignorance of Principle are simply foredoomed to failure. Good intentions scientifically conceived and put into practice without fear are incapable of defeat. Principle does not judge by good intentions, but by actions, with the result that the unscientific good intentions, being a negation of Principle, are at their best innocuous.

The very ease with which the good intentions of the New Year are allowed to lapse after the first failure to maintain them, is proof positive of this. If they had been scientifically conceived it would have been realized that one day is no more than any other in the effort of the struggle against evil. "Behold," Paul wrote to the Corinthians, "now is the accepted time; behold, now is the day of salvation." Christ Jesus put this even more emphatically when he declared, "But the hour cometh, and now is, when the tree worshippers shall worship the Father in spirit and in truth." The eternal now does away with time, and bids man not wait for New Year's day, or the return of New Year's day,

but realize that the demonstration of the truth of the omnipotence of Principle, may be carried out at any moment, if it is only carried out with that understanding of Truth which is man's natural freedom.

FREDERICK DIXON.

The Value of Money

Ir asked what money is, almost any one can answer glibly that it is a medium of exchange. Few stop to consider, however, what it really is that is exchanged or how the process actually goes on. Most people would say offhand that material commodities are the basis for the transaction of business. Yet the commodities themselves would be valueless without some sort of a mind to conceive of them as desirable, useful, and satisfying. In fact, all one has of any seeming thing is one's concept of it. Reasoning briefly in this way, one must recognize that the so-called material thing is just a belief in what Christian Science terms the mortal mind, and that it is this mind which supposes itself able to determine utility and value. In human affairs, then, the commodities are exchanged not as mere matter but as the suppositional mortal mind's concepts, known as goods. The whole volume of business in the world is but an exchange of these concepts, a process carried on by the human mind, which is itself only hypothetical.

Thus to see the mental nature of the process of exchange is not alone enough to enable one to discern the true spiritual activity in place of the human seeming. This sort of explanation of goods as human concepts is simply elementary political economy. Christian Science, in explaining and demonstrating the reality of value or of any other entity, does not stop with mortal concepts. As Mrs. Eddy says on page 123 of Science and Health, "Divine Science, rising above physical theories, excludes matter, resolves things into thoughts, and replaces the objects of material sense with spiritual ideas." All this seeming human exchange of goods is but suppositional counterfeit of the continuously varied activity eternally unfolding in the divine Mind, which is infinite and all that really exists. There could not even seem to be a mortal mind with its beliefs unless there is first the true Mind expressing itself as spiritual idea. The fact is that existence in infinite Mind is the only true living there is.

The truth that there is one boundless divine Mind manifesting itself as harmonious spiritual action does not rest on any system of human philosophy. Though human philosophy may have developed some basis for belief in one supreme God, no human philosophy has ever established the demonstrable truth that the idea, or activity, of the one perfect Principle is the Christ, which replaces all manner of human limitations with the abundance of spiritual good. It has remained for Christian Science to show that the Christ is available to-day for the healing of the world's false beliefs through the replacement of them with the divine idea.

The fact is that divine intelligence expressed is all that is valuable. The real man, expressing true intelligence, is rendering valuable service in accord with Principle. Since cause would not be cause without effect, the whole activity which constitutes genuine man is necessary in order that the divine Mind may be manifest. The action of perfect Mind, quite apart from any illusion of materiality, is all that can ever be of real value. This action is spiritual harmony, regardless of any human names that may be given to it. Spiritual man is just a name for spiritual activity emanating from infinite Mind. This divine emanation is complete, unlimited, ever fully sustained by its inexhaustible cause.

Money, considered as a medium of exchange, is thought

of as a means of activity, since exchange is just a form of action. The true man, manifesting Principle, is himself completely maintained in action by his creator. Man's unlimited harmony in expressing divine intelligence is, then, the true activity of which the mortal belief of money is merely a suppositional counterfeit. Sooner or later each one has to prove for himself that the real man succeeds in all that he is doing, not because of any human money but because of expressing divine intelligence.

How is this truth to be applied in everyday affairs? If a man seems to lack money, to have too much money, or to be confused in his monetary dealings, his first work is to turn to the divine Mind and reason intelligently on the basis that infinite Mind, with its spiritual idea, is the present reality, in spite of human sense testimony. In proportion as he understands that the intelligent activity constituting the real man is abundant, without excess, and ever rightly ordered, he finds the belief of lack, excess, or disorder vanishing in one way or another. Seeming obstructions turn out to be opportunities. The very desire first of all to express divine intelligence is fulfilled by reason of the truth that there is always infinite intelligence to express. If a man knows nothing more than that the true man expresses boundless intelligence which manifests itself as exactly right activity, he has a basis for cheerful and confident reasoning in accord with Principle-for the practice of Christian Science. In the presence of this spiritual reasoning, any human sense of values is soon readjusted more to the divine standard by the disappearance of just so much belief in limitation.

Activity, then, that proceeds from intelligent divine Principle alone is valuable. On pages 267 and 268 of "Miscellaneous Writings" Mrs. Eddy says: "The predisposing and exciting cause of all defeat and victory under the sun, rests on this scientific basis: that action, in obedience to God, spiritualizes man's motives and methods, and crowns them with success; while disobedience to this divine Principle materializes human modes and consciousness, and defeats them." To accept spiritual consciousness as the only actuality of experience is to understand genuine value, in place of any human concepts of money. This acceptance of the truth is a simple, practicable process to the student of Christian Science, who is always entitled to utilize for himself the abundance of spiritual wealth.

Gustavus S. Paine.

[Written for the Sentinel]

Victorious Trinity

FLORA F. GOOCH

O formidable Love!
Wherever thought,
Sweet fragrance dwells therein.
Do not Thy power, strength,
And all Thou art
Obliterate the dream of sin?

O formidable Truth!
Thy ways are far beyond
The reach of things that seem;
Thy presence feeds and lifts
The wayside dreamer
From his dream.

O formidable Life!
Most precious thought divine!
In Thee the trinity
Of all that was and is to be
Leads ever outward, up, and on
Into infinity!

Testimonies of Healing

Early in October, 1919, I was taken with a dull, heavy pain in the upper portion of my bowels. I went home from my office and had my wife call a physician, who, after several days' treatment, without relief, called in another doctor for consultation, at the conclusion of which they decided that all that they knew of had been done for me and that I could not live. My wife telegraphed for our relatives, and among those who came was a Christian Scientist. I asked her to take my case, which she did, and I soon experienced relief and was finally healed; also in a week or so I perceived that I had lost the appetite for tobacco. Then again in a few days I noticed that a rupture I had been troubled with for seven years was healed, and that I had no further use for a truss. Other discordant conditions have been destroyed, and I am now feeling better than I have for twenty-five years, not only physically, but mentally and spiritually.

I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and subscribed for *The Christian Science Journal*, and I am certainly having a time of rejoicing. I am grateful for this victory of truth over error. My recovery has served to awaken others to the truth, and my desire is to help some weary traveler who is looking for something better than he has, and while I rejoice because of the blessings I have received, I want others to rejoice with me.

J. A. Wilkins, Rolla, Missouri.

٠

For all the good, and all the daily blessings which Christian Science has brought and is bringing into my life, I feel that I can no longer withhold my testimony from the periodicals which Mrs. Eddy so lovingly organized and labored for, to meet the need of mankind.

About nine years ago I was healed, under Christian Science treatment, of gallstones and enlargement of the liver. I had suffered intensely from these ailments for over ten years, had tried every known medical remedy, and had been under numerous specialists, without obtaining any relief. I often used to pray for death, thinking it would be a welcome relief from all the tortures I was subject to. Christian Science has completely changed my whole life and outlook upon things. I used to wonder why God ever allowed us to be sick and suffer, and I could never really believe the Bible statement that God is Love; but Christian Science teaches us the truth about God and man, and that God, good, could not create evil, any more than light could create darkness.

I should like to mention an experience I had about a year after taking up the study of Christian Science. One morning I was busy laundering some blankets, when I suddenly missed my little boy, who was not quite two years old. I looked around for him and discovered that he had fallen headfirst into a large zinc tub full of hot soapsuds and ammonia, only his little shoes being visible. I lifted him out, sat down with him on my knee and declared aloud the following passage from the scientific statement of being, on page 468 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, "All is infinite Mind and its infinite manifestation, for God is All-in-all." I could think of nothing else; every other thought seemed to have left me, and again and again I declared this truth. After a short time my little boy regained consciousness and opened his eyes; I then proceeded to take off his wet garments, gave him some warm milk, and he went off to sleep and slept for about two hours. He awoke quite refreshed and well, but on his legs were lumps the size of an egg, due to kicking against the tub, which indicated that he

had been in the water for some time. These soon disappeared, and there was no other ill effect. I have mentioned this healing to encourage those who may have known of Christian Science for only a short time, to show that every statement of the truth does its work. It matters not how small we feel our understanding to be, if we use it, practice it, live it, we gain a little each day. Mrs. Eddy writes on page 449 of our textbook, "A grain of Christian Science does wonders for mortals, so omnipotent is Truth, but more of Christian Science must be gained in order to continue in well doing."

These are only two of the demonstrations I am continually making through the aid of Christian Science, which is proving to me daily that this is indeed the truth which makes us free. I can never sufficiently express my gratitude for the numerous benefits I and my family have received, through the study and application of this healing truth. I am grateful to God and to Mrs. Eddy, our dear Leader, for all the blessings Christian Science has brought into my life and into our home, and I am striving to know and understand more clearly the Christ, Truth, so that I may express more of good.—(Mrs.) May Merrill, Derby, England.

4

I am glad to take advantage of the privilege of expressing through our periodicals my gratitude for Christian Science. The benefits received from the study of the textbook, "Science and Health with Key to the Scriptures," and the other writings of Mary Baker Eddy, have been numerous and varied. Severe nervous indigestion, sore throat, and headache, have lost their terrors. The effects of a fall, which caused intense pain and afterwards threatened to make one leg helpless, were entirely overcome by prompt and persistent application of the truth of Christian Science. A burn from grasping a heated electric iron was healed instantaneously by holding firmly in thought the scientific statement of being. Many healings have also been witnessed. A cold with great fear of pneumonia vanished overnight; sprained ankles have been quickly healed. One trouble, thought by a physician to be water on the knee, requiring a cast to be worn for several months, was healed within the week by Christian Science treatment.

I have found that the teaching may be applied not only to the relief of mental and physical ills, but also to the solution of all the problems of daily life. As this truth is better understood, fear and inharmony are replaced by peace and joy, greater freedom is experienced, more intelligence is expressed, and also more love for God and man.

Appreciation of the work of our beloved Leader, Mrs. Eddy, has grown with my study and understanding of her writings, for I realize something of what we owe her for making clearer the teaching of the Christ, and man's relation to God. I am thankful, too, for all the periodicals established by our Leader, including *The Christian Science Monitor*, which is carrying its message of truth around the world. (Mrs.) May Johnston Hale, San Francisco, California.

٠

I am very grateful to Christian Science for what it has done and is doing for me every day. I did not take up the study primarily for physical healing, although I was suffering from many ailments at the time. I had been bereaved of my father, also of a very dear brother and, through misunderstandings, estranged from another brother. I was a member of a denominational church at the time, but its teachings did not give me the comfort I longed for at this unhappy time. I told my troubles to a

neighbor who is a Christian Scientist, and expressed the wish that I might understand how to pray as Jesus and his disciples prayed, as I felt that I, in common with most people I then knew, did not know how to pray effectually.

This neighbor kindly lent me her textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. It was while reading this book, in connection with my Bible, and other Christian Science literature, that I was healed of sorrow, also of resentment and worry. About two months afterwards, on commencing to read the literature, I became conscious of my freedom from a number of physical troubles, one of which was Bright's disease, with its attendant ills. I also had very weak eyes and was wearing very strong glasses. I began to apply what I understood of Christian Science, and my eyes became so much better that after a short time I was able to read my Bible and the textbook without glasses.

These healings all took place in 1910, since which time I have depended wholly on Christian Science to help me in every need, and have found it an unfailing help under every difficulty. My gratitude for what Christian Science means to me cannot be expressed in words. But I can truly say that the understanding of Life, creation, God and man. which it has given me, means much more to me than any of the mere physical healings, which have been many during the last ten years. All of these blessings which have come to me are due to the inspired life of our dear Leader, Mary Baker Eddy, to whom I am most grateful.—(Mrs.) ISABEL R. GAMMONS, Middleboro, Massachusetts.

٠

Until my twentieth year I was perfectly healthy, but business necessitated my going to Central America, where, it is supposed, the climate affected my health. I was ill for thirty years. I suffered from severe stomach trouble, nervousness, and perpetual colds, but mostly from the colds, and was constantly consulting the best physicians and visiting expensive health baths, with but slight and only temporary benefit. Owing to a weak heart I spent some time last year at a well-known resort, but with little result. Last December I was afflicted with an ulcer of the stomach, for which I consulted a nature cure physician, under whose treatment the condition slowly improved, leaving great weakness in its stead, however.

An acquaintance whom I called upon at this time turned my attention to Christian Science. Her husband, who had formerly been seriously ill, was now able to walk without crutches. I listened in amazement to what she told me, but upon arriving home laid away, unread, the books which had been given to me. It was not until four weeks later, when nearly desperate owing to inability to retain food in the morning, and fully intending to look up another well-known bathing resort, that I thought of going to a Christian Science practitioner whose name had been given to me. I received my first treatment. Frankly, what she told me did not please me, and somewhat disappointed at what I had heard I returned home, but followed the good advice of the practitioner to try to realize God's omnipresence and in my everyday life to follow Christ through self-denial, brotherly love, and purity of thought. I also read Der Herold and the other periodicals a great deal, and studied with the voracity of one who commences to realize that he is discovering valuable treasures. The brushwood of false beliefs was penetrated, and from that day on, such courage took possession of me that I took no more medicines. What seems most wonderful to me is that I can eat what I want, whereas before I was constantly dieting. I go to sleep soon after retiring and awake in the morning feeling refreshed, whereas formerly I lay awake for hours at a time and arose tired.

Nervous pains in the feet are gone, constant colds have ceased, and all my aches and ills have been replaced by health and joy. Whereas formerly I was scarcely able to ascend the stairs, I am now able to ascend with an elastic step. I feel as though I had been rejuvenated and sing with joy. I am commencing to see that the world is not a valley of tears but that it is lovely; that joy, not sorrow and trouble, is our right if we know how to think and live aright. When my friends and acquaintances marvel at the change, I tell them, "God has made me well."

As great as my suffering was, so great is my gratitude. It is my greatest desire to live the teachings of Christian Science and to honor God, who, through our revered Leader, Mrs. Eddy, revealed to us this truth which helps my neighbor and myself.—(Miss) Laura Hinrichs, Altona, Germany.

It is with gratitude that I send this testimony of the many benefits received through the application of Christian Science as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had tried all material means for the cure of stomach and bowel trouble and other ailments that are supposed to follow a condition of general breakdown, but I did not receive any benefit until in Christian Science I found the truth of being. I had practically given up my business and was told by medical doctors that there was no hope for me, but after a few treatments in Science I returned to business, and in the last five years have been more successful and had a greater capacity for work than ever before.

I am indeed grateful to God, who is an ever present help, and to Mrs. Eddy for this wonderful truth which releases us from the bonds of slavery to unreal masters.

R. J. Osborn, Fond du Lac, Wisconsin.

4

The following is a quotation I often think of, for I can apply it to my growth in Christian Science:—

We rise by the things that are under our feet; By what we have mastered of good and gain.

When the truth is applied, as taught by Christian Science, with each error overcome and mastered, something of good is gained. I am thankful that with each physical healing I rise a step, and that the physical healing is merely a sign, or result of the real healing, which is spiritual. My first healing, which took place with the help of a practitioner, in about a week, included the overcoming of nervous trouble, neuralgia, constipation, and valvular heart trouble. The heart trouble, which the doctors said was the result of inflammatory rheumatism when a child, was a source of constant fear on the part of relatives and friends. All kinds of remedies had been tried, such as change of climate and medicine of all kinds, with only temporary relief.

During these four years since my first healing I have had many varied problems, and have found Christian Science an ever present help and cure in every one. Our baby girl, now over two years old, was born with very little pain to me and without any bad results. The doctors had said this would be impossible. The baby has had several healings, one of severe cold; also of bowel trouble and effects of teething. She has also been protected by the power of Truth from many contagious diseases to which she was

exposed. There are so many healings to relate that I can give only a few of the most marked ones.

The dentist, after having an X ray of a tooth taken, said I would have to have the wisdom tooth removed as it was crowding the one next to it, resulting in much pain, and as this tooth was not in sight he said it would be rather a serious operation, but thanks to Christian Science the pain soon left and the operation was not necessary. This was over two years ago and I have had no trouble with it since. I would also like to state that all these healings have been permanent and I am a perfectly well woman to-day. To say I am thankful for all the good which this truth has brought to me would indeed be inadequate. I am trying to live my gratitude, knowing that this is what God demands of us.

(Mrs.) Cora Mc D. Moffitt, Long Beach, California.

4

It is with great gratitude that I give my testimony to the regenerating power of the truth as taught by our Leader, Mary Baker Eddy, in her textbook "Science and Health with Key to the Scriptures."

When I began to read the testimonies I did not believe them, and discontinued reading them. Later I went to the Christian Science church and heard them given there, and began to question the object of the people who gave them. I knew they could not all be deceived, nor could they all be trying to deceive others, for their testimonies were given with such sincerity. I had come to the place where I could no longer believe the teachings of my own church, and the human sense of life was such a burden to me that more than once I was at the point of ending it all. I was told by my pastor that God sent suffering for some good purpose, and yet that God is Love. I could not endure it and gave up attendance at the church services. I could not even open my Bible without reading of the wrath of God, and so finally did not open it at all, and became so miserable mentally that I could not even bear the sunshine, for it seemed to be mocking me with its gladness, and I could not endure the darkness of the night. I was miserable mentally and physically, discouraged, despondent, and always weary.

For six years I hardly attended a church service or read my Bible. During that time I often thought of the words: "Be still, and know that I am God." Yet I could not seem to get anything from them. I looked into other religions but could find no abiding place, nor peace. One day I found a copy of the Christian Science Sentinel that had been left by some one. One of the articles started with the words, "Be still, and know that I am God." I picked it up and read it. It stated that the starting point in Christian Science is the allness of God. That was a new idea to me. I took the Sentinel the next day and went to the beach, where I could be alone, and I read it all day, and knew I had found the truth about God. After that I thought I would try Christian Science treatment for a trouble for which I had used drugs or some material means for years. I did not care so much about the healing as I did to prove the power, or law, of God. I told the practitioner I could not believe the healing possible, but in less than half an hour I had my first proof. In two years the trouble returned. I called the same practitioner, and in two treatments the healing was complete. Since then I have received many healings. The sense of lack seemed the hardest to overcome, but I have learned that in seeking God first all our needs are supplied.

This has been the experience of ten years. I have been very discouraged at times, but I knew there was no other way, so I would press on, for no matter how dark the seem-

ing, there was always a way out. I am thankful for our periodicals; they have brought me many healings and helpful thoughts. All that I am or hope to be I owe to Christian Science. I am thankful for the privilege of helping others, and for membership in The Mother Church and in a branch church.—(Miss) Adalaide M. Briggs, Rochester, New York.

4

I have been greatly benefited by reading the testimonies of healing in the Christian Science literature and I hope that mine may help others. Before taking up the study of Christian Science, I had searched for three years in a denominational church for the practical religion of Christ Jesus, the religion that would teach me to walk in the straight and narrow way. I had left the church, discouraged and disappointed, because I had not found that for which I was searching. One day my husband came home from work with a cold, which settled in one eye; his nose and the whole side of his head were badly swollen. His company doctor had treated him and then sent him to an eye specialist, but he received no relief from the intense pain he was suffering; he was unable to eat or sleep. I asked him if he would allow me to call a Christian Science practitioner who lived near. When I gained his consent the practitioner was called and with the first treatment all pain left and he was able to eat and sleep; in three days his eye and face were in normal condition and he returned to work.

I realized if this truth healed one disease it could heal all diseases. I went to my medicine chest and emptied the contents into the sewer, and neither I nor my family have taken any medicine since that time, nor has there been any in the home. Chronic constipation, headaches, biliousness, measles, extreme nervousness, influenza, and pneumonia have been healed through the application of the truth as taught in Christian Science. Glasses also have been dispensed with, after I had worn them most of the time for twenty years. After the birth of my daughter I lost the sight of one eye temporarily, and lived under the constant fear of going blind, but the application of Christian Science proves the truth of Jesus' saying, "If ye continue in my word . . . ye shall know the truth, and the truth shall make you free."

I am grateful to God, to Christ Jesus, and to our beloved Leader, Mary Baker Eddy, for this practical religion. I am also grateful to all who have so lovingly helped me. I am grateful for the Christian Science literature and for the lectures which always meet the need of the hour. I am grateful for class instruction and for the privilege of helping others.—(Mrs.) Mabel C. Edens, Los Angeles, California.

I am deeply grateful for my healing which occurred just as stated above in my wife's testimony. The healing has been permanent; I have had no return of this belief.

T. BENTON EDENS.

Christian Science came to my attention about four years ago, and answered all the questions I had ever asked about life. At that time my only sister had passed on, leaving me, as well as the rest of my family, in great sorrow, and with all my plans for the future upset. Christian Science has taught me that God's plan for His children is unalterable and that we need to come into accord with the divine plan, which always results in harmony.

With the help of a practitioner I have experienced many physical healings, including that of a cough of several years' standing, internal injuries resulting from a railroad

accident, a constant sense of fatigue and weakness, and a tendency to have either the grip or a series of bad colds during the winter. The first demonstration I made for myself was the healing of an attack of neuralgia. I had just been reading the seventh and eighth chapters of Romans, and had gone out to sit on the porch in the cool of a fall evening, when I became conscious of the usual pain in the head and face, believed to be due to sitting where the north wind reached me. As I started to go into the house, I stopped and asked myself: "Why should I go in? If the words of Paul are true, that 'the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death,' then I am certainly under no law that can condemn me to suffer pain because the north wind blows on my head." Immediately the pain ceased, and I stayed out the rest of the evening, without suffering any unpleasant result.

At another time I was instantaneously healed of an acute attack of intestinal trouble through the realization of the truth. While very grateful for these healings, I am more thankful for the consciousness of God as not far off, but very near, and both able and willing to fulfill His promises to His children.

(Miss) Mary Olive Priest, Carthage, Texas.

I have been studying Christian Science for six years. The first erroneous belief which was destroyed was the feeling that something terrible was going to happen, which made me miserable most of the time. I could read very little without suffering from nausea; now I can read all day without any discomfort. Our little girl is four and a half years old and has never tasted medicine.

Recently I had a wisdom tooth pulled that set down in the jaw bone so that the dentist had great difficulty in getting at it. I called a practitioner afterwards and got relief. I went back to the dentist later as he wanted to see the condition and he was surprised to find it healed and said, "I don't understand it, but all I have to say is that you are extremely fortunate." It was this healing that urged me to write this testimony. I am truly grateful.

(Mrs.) ELSIE M. KING, Tacoma, Washington.

After a long period of silence I, too, wish to express my gratitude for the many blessings which I have experienced through Christian Science. In the year 1914 I had such severe pains in my feet that walking was often made impossible. This condition became constantly worse. I then consulted a physician, who stated that I had fallen arches, due to much walking and standing, and who also told me that I must always wear high shoes with supporters, for otherwise I would become flat-footed. The supporters were made, but I was unable to walk with them. The pain remained the same, rendering me almost desperate at times. We own a business which necessitates my being on my feet a great

Just at this time my attention was called to Christian Science by dear friends. At first I read Der Herold, and attended the Wednesday evening meetings, then went to a practitioner and asked for help, which was lovingly given. The healing was slow but sure. It is now over four years since the trouble completely disappeared, and it has not returned. I attend to the business and my household, often causing the customers to wonder how it is possible for me to do everything alone. But I know where my strength comes from, and that with God there is no weariness, for "God rests

in action" (Science and Health, p. 519). I was also very illhumored toward my surroundings, but to-day am a happy and contented person.

My husband also was healed of the grip through Christian Science over a year ago, and then from relapse, which from the human point of view was very severe. The relapse occurred on a Saturday night. My husband had high fever, and other disquieting symptoms. I called up the practitioner, who came immediately and worked for him. I remained perfectly calm, knowing that God is ever present, and is our help. My husband became quieter, and I read to him from the Bible. In the evening he ate a little, slept peacefully the whole night, and was able to get up the next day. After three days he again attended to his business.

For all these blessings and many others, all of which I cannot enumerate here, I owe endless thanks to God and gratitude to our dear Leader, Mrs. Eddy. My greatest desire is to constantly increase my understanding of Christian Science.—(Mrs.) HELENE GÄNDERICH, Berlin-Wilmersderf, Germany.

It is a great privilege to testify to healing received through Christian Science. When I first entered a Christian Science church about two years ago, I was healed, during the service, of pain in the back of my neck, from which I had been suffering for a long time. In the time that has elapsed I have had innumerable healings, among them that of an abnormal growth, influenza, and a severe case of eczema. I wish to testify in particular to the healing through Christian Science treatment of a complete nervous breakdown. The organs of my body were not properly performing their natural functions. Two physicians were called, who said they could not do anything for me. I lay in a state of catalepsy for two days. A Christian Science practitioner gave me treatments, with the result that at the end of that time I was able to walk to the table with her and eat. Finally I was completely healed, and it has been wonderful to have it proved to me without a doubt that the truth destroys all false beliefs. Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 495), "God will heal the sick through man, whenever man is governed by God. Truth casts out error now as surely as it did nineteen centuries ago." I am so grateful to God for this wonderful healing, and to Mary Baker Eddy, who revealed this great truth through which I was healed.

(Mrs.) Edith T. Balley, Chicago, Illinois.

I have felt for a long time that I should acknowledge the great blessings which have come to me through Christian Science, and thus share with others the good tidings.

I first received treatment after the birth of our little daughter at which time I nearly passed away. I was then healed of hemorrhoids in one treatment, and was able to make a trip of about eight hundred miles alone, when the baby was only about two months old. Other healings have been that of constipation, toothache, and influenza, the latter while I was in the western part of the United States among strangers, where I was welcomed by Christian Scientists with such love as I had never before experienced. My desire is to grow daily in the understanding of the truth.

There is no church here and only one other Scientist, the practitioner who helped me being at a distance of about twenty-five miles. I am grateful to her for her ever loving aid, and to Mrs. Eddy who has again given to the world the truth as taught and practiced by Jesus.

MRS. J. F. HALL, St. Bernice, Indiana.

Signs of the Times

["Real Unity"-The Christian Science Monitor, Boston, U.S.A., Nov. 13, 1920]

On page 138 of "Miscellaneous Writings," Mrs. Eddy writes, "I once thought that in unity was human strength; but have grown to know that human strength is weakness, -that unity is divine might, giving to human power, peace." In this passage Mrs. Eddy points out that the source of all unity must be divine and not human, and it is well for every one to assure himself that he is in unity with good, and not just one of an unthinking crowd that is following the multitude without knowing why or wherefore. It is the easiest thing possible to be in so-called unity with the majority in human opinion, but where does such unity sometimes lead? In the Biblical story of the Gadarene swine, the unity that existed amongst the swine led them down the steep place into the sea to their own destruction. And that, of course, is the inevitable result of unity with evil, or error. It is now more than ever necessary to be alert and watchful to see that no subtle temptation to seek an easier path is accepted, and that our real peace and safety lie in being in unity with divine might, not human strength.

On looking back at the great war something may be seen of the suffering and disaster that can be brought about by so-called unity, when that unity is based on human strength, and not on Principle. The unity of God and man can never produce discord; but its counterfeit, the unity of mortal man and evil, can produce nothing else, for it is by its nature the very essence of discord. How then can we know that we are in unity with good and not evil? Jesus gave the people of his day one unfailing proof. "By their fruits ye shall know them," and in another place he asks, "Do men gather grapes of thorns, or figs of thistles?" Mrs. Eddy says on page 324 of Science and Health, "Unless the harmony and immortality of man are becoming more apparent, we are not gaining the true idea of God; and the body will reflect what governs it, whether it be Truth or error, understanding or belief, Spirit or matter." It is obvious that a student of mathematics will quickly find out, in working out his problems, if he has gained or is gaining a correct understanding of the rule applying to his particular branch of study. He may, however, make mistakes in cases where he has failed to grasp the rule, and these mistakes will eventually prove a blessing, as they will effectually prevent him from uniting himself altogether to the wrong interpretation of the rule, and thus landing himself in chaos.

It does not by any means follow as the inevitable result of any individual or body of people following the right path that that path will be strewn with flowers or prove an easy one to follow. The consequence of standing against the tide of error is sometimes uncomfortable, and often to such an extent bewildering that it may seem almost impossible at first to see and know that only good can result from following Truth. This is often when the temptation comes to take the easier path, and to let error have its own way because it seems the most harmonious for the time being. But what would the result of such an action be? It would be the gradual separation, in belief, from Principle, with an ever widening of the distance that will have to be traversed again by the student when he finds, as find he must, that the wrong step has been taken. A careful study of the doings of the children of Israel will show how in every case where they wandered from the road they were commanded to follow, their steps had to be retraced

and they eventually found that only through obedience to Principle could they reach the promised land.

To be obedient to Principle means to be at one with God, to be in unity with divine Love, and therefore to dwell "in the secret place of the most High." In such safe abiding, it is easy to see that though to material sense all may seem discord and turmoil, there is no sense of anything discordant to a man who knows, beyond question, his unity This knowledge proved beyond all doubt by demonstration, lifts the one who has proved it above all the seething turmoil of error, and gives him something of the vision of the Christ that John, the beloved disciple, had on the Isle of Patmos. It shows him that error is powerless to affect the spiritual idea, and that just in proportion to his grasp of the infinite nature of Love,-that Love knows nothing of hate, and therefore knows nothing of evil or discord of any kind,—will he be able to see the nothingness of all that opposes itself to the true idea of unity, the unity of God and man.

The unity of good has its counterfeit in the so-called unity of evil, and in the Bible we may find many instances of the attempts of united evil in the form of great armies, or great men, or rulers of great peoples, endeavoring by their numbers to destroy or overthrow the chosen people. The children of Israel, or the chosen people, were those who had gained some understanding of God, though perhaps only a faint one, and when pressed by their foes they were able, by their unity with and obedience to Principle, to overthrow the mighty hosts of their enemies. Thus the children of Israel escaped from the armies of Pharaoh, who were themselves overwhelmed in the Red Sea; the small army of Gideon defeated their foes, the Midianites and the Amalekites; the youth David overthrew Goliath and thus destroyed the power of the Philistines to harm the children of Israel; through unity and obedience the children of Israel conquered the city of Jericho; Daniel by his obedience to Principle was protected from the lions, and the three Hebrew youths from the fiery furnace. These incidents prove beyond the shadow of a doubt that only in unity with Principle, God, is divine might, and nothing can stand against that real unity—the unity of good.

[From "Christian Unity"-by William Temple in The Pilgrim]

The most conspicuous movement among Christians at the present time is the movement toward unity. What the world plainly needs is a positive principle of unity other than the natural kinship of certain temperaments to one another, the unity of natural friendship we all appreciate. But it is no cure for natural enmity, or for conflicting interests where no friendship is at hand to avert hostility. Is there any unifying power that can hold men together in fellowship despite all differences of race, experience, or temperament, and without the help of a common enmity? If there is, it is the key to the world's progress.

[From The Watchman-Examiner]

In the projected world conference on "Church Unity," if it shall ever materialize, let all "man-made" creeds and confessions and preconceptions and claims of superiority be laid aside, and with all standing on a common level before God, let the New Testament be adopted as the sole determining authority in all matters of faith and practice. Then interpret it, not in the light of subsequent history, but in its own light, as the inspired record of Christ's teachings. . . . There are those who flippantly say, "You can find support for any-

thing in the New Testament." That is not true. It is a gross libel upon our sacred Book. It is because men interject their own ideas into it that it seems to yield so many grotesque meanings

What we plead for, then, is an honest, unbiased exegesis made by men who approach the study, not as Roman Catholics, not as Anglicans, not as Presbyterians, not as Baptists, but as humble seekers after the truth, submissive to the guidance of the Holy Spirit, and desirous only to know the mind of Christ, for the simple purpose of conforming to it.

[From The Cambridge (Massachusetts) Tribune]

Prejudice against Christian Science is waning, and taking its place is an earnest desire to learn what is its real nature, and how it may be applied for the benefit of mankind.

["Disease Books Excluded from Public Schools"-from The (Phoenix) Arizona Republican]

In a resolution adopted as the result of a protest filed by the Public School Protective League, the state board of education recently voted to exclude from the school curriculum the "Primer of Sanitation" by Ritchie, and parts of the "Primer of Hygiene" and "Human Physiology," by Ritchie and Caldwell. Objection was made to these books by the Protective League on the ground that they teach the germ theory of disease and the serum treatment exclusive of other curative methods and that they contain many passages calculated to inoculate the minds of children with a fear of disease and the thought of death. The books, according to the protest filed with the League, contain statistics of death caused by various diseases together with detailed and vicious descriptions of symptoms and statements of children's especial liability to certain ailments.

["Signs of Hope in Europe"—From The Congregationalist and Advance]

There are signs of hope in the religious life of those countries of Central Europe where Mr. John R. Mott finds evidences of social and economic recovery, as indicated by the article which we print this week. Even in Germany there is at least the great deliverance of a complete overthrow of governmental control over church activities and life. The churches are no more to be departments of the state. In the words of Prof. Albert Deissmann of Berlin, who has written a survey of the German religious situation transmitted by the Federal Council of the Churches of Christ in America, "The revolution has abolished the 'summepiscopate' (the authoritative oversight) of the reigning princes, and the German Constitution of 1919 has decreed the separation of Church and State." . . .

Even in Russia there are signs of a stirring of spiritual life. The overthrow of the ruling church authorities and the many persecutions and massacres did not kill Christian faith. They have proved a call instead to the essentially religious spirit of the Russian people and in many places spontaneous revivals of religious interest and purpose are reported. When the Russian reorganization comes it will find the church as much in need of rebuilding as the state.

[From "The Problem of Martha" by A. Clutton-Brock, in The Atlantic Monthly]

If you are a Christian, you will not believe that God sets you impossible tasks . . . the very sense of impossibility or futility is itself a sickness that can be diagnosed and cured. ... Fear, being entirely negative and so entirely unpleas-

ant, always seeks to disguise itself in some positive transformation. . . . The commonest disguise of hidden fear, in modern educated men and women, is cynicism. . . . Cynicism, in fact, is the art of those who dare not be artists, the courage of those who will not confess their own cowardice. If we knew this, we should none of us be cynics: we should look for the fear of which our cynicism is a symptom; should

seek joy in faith and not in the denial of it.

But this mild cynicism, so common and so enervating to the mind that enjoys it-what fear does it disguise? Usually, I think, the very fear that it repudiates: fear of what "everybody" thinks and does and says. . . . It is this secret fear that imposes the tyranny on others; because I am afraid, I am resolved to make others afraid. If I could confess my own fear, I should wish to free others from it also. . . . There is, of course, a common belief that the sense of duty is necessarily based on fear; that, if fear is abolished, the sense of duty will go with it; but this belief is itself a result of fear, a fear of human nature and, indeed, of the whole nature of the universe. There is another conception of duty, based not on fear but on hope,-namely, that it is identical with the desire of the whole self, if only that desire can be discovered. . . .

The cure will not work in a moment; we are only at the beginning of self-knowledge; but at last it has begun. For ages man has been gaining power over the external world, but without any increase in self-knowledge, and so in selfcontrol. The task for man now is to know himself, to enter upon a new age of achievement. And, first of all, he needs to confess that, with regard to self-knowledge, he is still in the stone age. All our morals, our conventions, our scientific method even, have been evolved blindly in the past of self-ignorance; but at last we are being driven to selfknowledge by suffering. We see that it is useless to tell sufferers, including ourselves, to be men and overcome their troubles. We are not yet men, or women, because we do not yet know ourselves. But, with the desire for self-knowledge, with the first glimmering conception of what it means, an immense hope has entered the world.

["The Golden Rule in Business"-From Manufacturers Record, Baltimore, Maryland]

Some years ago the vice-president of one of the greatest steel concerns of America in an address before the American Iron and Steel Institute took as his subject, "The Golden Rule in Business." He claimed that in every business relation, whether dealing with customers, competitors, or employees, it was possible to follow the Golden Rule as the surest guide in all business dealings. His address was enthusiastically received by the hundreds of leaders in the iron and steel industry who were present. Since that meeting there has been a widespread development of the thought that in all human relations men should strive to put into practice the divine command to do unto others as we would that they should do unto us. But what a revolution in human affairs would be inaugurated if all men practiced that doctrine!

If all employers would honestly put themselves mentally in the place of their employees and then study the meaning of that command, there would be a mighty change for the better. If all employees would put themselves in their employer's place and endeavor fully to carry out that teaching, there would be no slacking, no inefficiency, and no effort to browbeat and bulldoze other men who did not belong to their particular union. If all buyers and sellers would faithfully do unto each other as they would wish others to do unto them under similar circumstances, honesty would everywhere prevail, and the world's business would move forward to a higher and nobler plane, with larger prosperity for all.

No man is living a true life, no man is doing his full duty to himself and his fellow men as employer, or employee, as buyer or seller, who cannot conscientiously say that to the very best of his knowledge he is seeking to carry out this supreme rule of human conduct. No man is thoroughly honest at heart who is not willing to examine himself to see if his motives square with this divine command, which is just as binding as those which say, Thou shalt not steal, thou shalt not murder, thou shalt not commit adultery. Men may follow these commands and still utterly fail if they do not follow that other command which says, "Whatsoever ye would that men should do to you, do ye even so to them."

[From Newark (New Jersey) News]

Sensing in a phrase used recently on the editorial page of the *News* an implication that Christian Scientists subject themselves to voluntary self-deception, the Christian Science Committee on Publication for New Jersey asserts that such implication is erroneous and asks its correction. The phrase and its context, however, did not appear in an editorial of the *News* as inferred, but in an excerpt, published November 15, from an article by Henry Hazlitt in the November issue of *The Financier* and credited as such.

"It is quite a jump," says the Publication Committee, "from the gold reserve to Christian Science, yet you contrived to execute this saltatorial exploit in an editorial upon the gold reserve in the News of November 15. Immediately following the sentence, 'What some bankers are practically saying is that the world could get along without gold reserves if every one entered into a conspiracy or agreement to deceive themselves that gold reserves existed,' you then add, 'They advocate a monetary Christian Science.' Quite a jump, indeed. The obvious implication of your comment is that Christian Scientists enter into a conspiracy or agreement to deceive themselves. This is undoubtedly a common error of belief concerning Christian Science, but because an error is common is no good reason either for its finding currency in the News or for its passing unchallenged and uncorrected. Consequently, I am constrained to crave space for the correction of this erroneous implication.

"The truth is that Christian Scientists never close their eyes to facts; they simply refuse to accept sense testimony as incontrovertible evidence of facts. This is precisely the attitude and the practice of physical scientists for the past three hundred years. It is but little more than three centuries ago that the whole world, learned and simple, accepted sense testimony without question as proof of the facts as to God's creation. Accordingly, they all then believed that God had created a flat, circular earth, an inverted bowl-like sky, and heavenly bodies revolving somehow about a stationary earth. They were all quite sure three centuries ago that Copernicus and Galileo were deceiving themselves, or being deceived by the archenemy of the human race.

"Now we smile self-complacently at the simplicity of our forefathers, but we hold fast just as strongly as they did to such sense testimony as we have not yet surmounted. Most people still quote as conclusive the old adage, 'Seeing is believing.' Lawyers have a maxim, justified by the legal experience and wisdom of centuries, 'False in one, false in all,' and when they find a witness false in one important particular, they scan all the rest of his testimony with grave circumspection. Christian Scientists adopt a somewhat similar attitude toward sense-testimony, which has been proved

false not only in one but in various other important particulars. Instead of deceiving themselves, therefore, they are, on the contrary, awake and alert against any further self-deception.

"'The Ptolemaic blunder,' Mrs. Eddy writes on page 123 of Science and Health, 'could not affect the harmony of being as does the error relating to soul and body, which reverses the order of Science and assigns to matter the power and prerogative of Spirit, so that man becomes the most absolutely weak and inharmonious creature in the universe."

+

[Introduction to a Christian Science Lecture in London, England]

The world is still suffering from the aftermath of war, as evidenced by the prevailing unrest, dissatisfaction, and general anxiety on every hand. But the world has always suffered from these evils and will continue to do so until it ceases to look for satisfaction in matter. For nearly two thousand years it has neglected the remedy for this condition offered by the Master, who said, "Come unto me, all ye that labour and are heavy laden, and I will give you rest."

Christian Science has come to this age to show the world how to come to the Christ, not through creeds or old the ology, but through the simple healing truth that matter and evil are unreal. This truth was revealed to Mary Baker Eddy and is found in the Bible and in the Christian Science textbook, "Science and Health with Key to the Scriptures," which she wrote. This Science shows that all anxiety and fear are simply the belief that God, who is omnipotent and ever present, is in some strange manner believed to be absent and not powerful. In other words, the evil feared is believed to be more powerful than God, and more present than ever present Love.

Such beliefs are obviously absurd, and Christian Science shows how one can get rid of his fears and the consequent inharmony which they bring into experience. Christian Science also proves that all one's experiences, physical or otherwise, are the result of thought, and this Science, when properly applied, destroys all inharmony. As Mrs. Eddy says in her textbook (p. 445): "Christian Science silences human will, quiets fear with Truth and Love, and illustrates the unlabored motion of the divine energy in healing the sick."

[From The Observer (London, England)]

The business of religion (writes Mr. Frederic Harrison in the new Fortnightly) is not so much to tell men what goes on in heaven, and how to get there when we leave this earth—but rather to tell men how to do their duty whilst they are here: and what the brotherhood of man really requires them to do one to another. . . . There will be no real peace on earth until there is promise of a common religion based on scientific certainties which all can accept, and training men from childhood to practice that personal and social conduct in life which is at once their duty and their true happiness.

[Minosuke Yamaguchi, M.A., M.D., as Quoted in The Pioneer]

The National Temperance League of Japan was organized twenty-two years ago. The League has more than one hundred active societies at present scattering all over the land, and new organizations are added from time to time. These societies are now very much alive, and most effective work is carried everywhere by respective leaders. "Dry Nippon in ten years" is the goal many such leaders are aiming for at present.

Annually for the last twenty-one years a member of the

Ţ.)

Lower House of National Diet has introduced a bill prohibiting the sale or giving away of liquor to minors for their own use. This bill has passed the Lower House eleven times, and has been several times approved by a committee of the House of Peers, but has always been finally voted down in the House of Peers. It is encouraging, however, to know that the number of supporting votes is increasing steadily, and the last fight shows that seventy-nine members were in favor of this bill against one hundred. The gulf is not very wide. Moreover, temperance sentiment is certainly increasing, and it is not difficult to predict that the final victory is very near.

Since the United States effected the national prohibition Japanese sentiment went through wonderful changes. The prohibition in the United States was a very popular topic in our papers and magazines. Every one seemed eager to know more about why and how such a wonderful prohibition was introduced to such a free and the strongest and richest nation like the United States. Our people became very serious over it. They read and listened. Now they have begun to think. It was, therefore, my great privilege to take such opportunity to speak on these subjects everywhere I visited. Those few scientific facts I gathered in this country helped me much. Our people were very much impressed with them. It is a fact, ladies and gentlemen, your research work done in many laboratories helped to awaken many prominent scientific men and women of our country. Many able scholars were converted to carry the banner for prohibition. You will see that many university professors and college teachers are taking a part in our active campaign. Many prominent government officers, statesmen, medical men, business men, many well-known manufacturers and such, may be found among our ranks. Even many rice brewers expressed their intention to give it up.

["The Truth Still Remains"]

During the campaign for the no-license ballot in Scotland a somewhat exciting meeting was held in St. Andrews which was attended by many of the students. The Varsity students behaved in a boisterous fashion, and several of the young men of the town had become intoxicated for the occasion. But Pussyfoot Johnson held his ground with great courage and sportsmanship. It was a remarkable thing that every time he tried to voice a truth, the trouble began,—error trying to drown the truth. He said so himself. Pointing at the noisy mob, he shouted: "Do you hear that? That is the voice of evil and filth and unhappiness trying to keep good from entering your homes; but they can howl all night, yell themselves black in the face,—the truth still remains."

[From "Science and Life" by F. C. S. Schiller, D.Sc., in The Hibbert Journal]

We may consider what should be the effect of the new theory of radio-activity on the old assumptions that matter and energy are uncreate and indestructible. These assumptions were, of course, never proved facts, but essentially methodological,-that is, the simplest and most natural assumptions wherewith to approach the facts,—and the physicist ought never to have regarded them as dogmas, seeing that all his "proofs" of them presupposed the principles to be established. But this might well escape notice, seeing how prone the human mind is everywhere to turn its methodological assumptions into metaphysical doctrines. The error of the physicist was pardonable, and almost inevitable. When, however, the theory of the spontaneous dissociation of the atom was adopted as the interpretation of the marvelous facts of radio-activity, the logical situation should have become clear. It plainly pointed to the corollaries that

the atom was as little immutable as were its combinations, and that in every case it had probably come into being and was destined to pass away, though so far this behavior had only been established as the habit of the uranium and thorium families. These new facts should have sufficed to discredit the dogma of the indestructibility of matter. They definitely proved that the experimental evidence by which this indestructibility was supported had been grossly inadequate, and that we had never really been in a position to decide whether matter was increasing, decreasing, or constant in amount.

["The Evangel for Students"-From Association Men]

Staggering problems confront America in these days of reconstruction, but there is no question which is more vital to the very life of the nation than determining what shall be the output from our high schools, colleges, and universities. . . . Students were never more responsive when faced with the real situation and challenged with Christ's solution for our individual and social problems. Even many students who have the reputation of caring nothing for religion will respond heartily when brought face to face with the real facts of what is involved in actually living a vital Christian life in relation to God and man. Most of these men are willing to attempt to go the whole way, but they have no use for religion that does not express itself in individual and social relationships.

[From Public Opinion, London, England]

"All this talk (and it is amazing how often one hears it) of settling once and for all the problems of the relations of capital and labor by a decisive victory is nonsense," says *The Times*. "It is the capitalistic counterpart of syndicalism. There can be no final settlement of these relations; to the end of time their successful adjustment will depend on the existence of a reasonable frame of mind, which cannot be created by a 'fight to a finish,' or even 'a knock-out blow.'"

[From The Abolitionist, the Journal of the British Union for the Abolition of Vivisection]

The editor of the Medical Officer, in a leaderette on "Hippocrates and Others" in his issue of September 11, casts ridicule upon "some of our so-called epidemicologists" who are "making themselves absurd by discovering 'new' diseases." . . . He refers to the germ theory, and especially to "the causative organism of influenza," and admits that up to the present time "we are not really certain of its nature." The difficulty lies, apparently, in the fact that a germ can be no longer looked upon as an unchanging specific organism of a specific disease, as was proclaimed by Pasteur and accepted open-mouthed by a credulous scientific world. All that "science" has been knocked on the head, and the changing nature of these elusive micro-organisms has become the wonder and despair of the modern bacteriologist. . . . There will presently be no more left of Pasteur's germ theory of disease than there is of Jenner's proud assertion a century ago about vaccine lymph. The latter has long been cast into the melting pot. The former is fast moving in the same direction.

[Rev. John A. Hutton, D.D., in Record of Christian Work]

For myself I see no way of refreshing this world with energy, and of guiding its invincible natural vitality, except by moving forward,—for surely it is wrong to speak of a return to faith, as though faith were something less energetic and adventurous than the range of mind to which man has

already attained, as though in his acts of faith a man were shrinking from the facts of life,—by moving forward to some all-embracing vision of our life and fortunes, which with a new understanding and passion we shall hail as God, before whom we shall all agree that our personal purposes and our public policies shall stand or fall.

["The Church and Labor"-from Glasgow Citizen, Glasgow, Scotland]

Speaking at a public meeting held in Motherwell on Saturday night, in connection with the annual conference of the Church of Scotland Young Men's Guild, Mr. M. P. for the Motherwell Division, and a leading employer of labor in the district, said this country was now on the edge of the precipice, and unless all were imbued with the religious outlook, and endeavored to spread it among their fellow beings, we were much nearer the precipice than most people imagined, because, in his opinion, it was not by what managements could do but by what the church could do that our industries and our country could be saved. He did not suggest that the church should decide questions in dispute between masters and men. He trusted sincerely that the church would never come down to take part in these discussions. The church should reveal the strength and beauty of true justice.

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, BOSTON 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

THE need for writing a few lines of appreciation for the wonderful help THE CHRISTIAN SCIENCE MONITOR has been to me in educating my children has presented itself to me. I live in a part of Egypt where there are no educational advantages, nor can I secure a governess. This seemed a great problem to me, as I did not know anything of present methods of education nor had I our modern school books. I have found the Monitor supplies my need, and every one is astonished at the knowledge and culture of my two eldest girls who are now ready to go to school. Christian Science has taught me what true education means. I used to think I had not time to read the Monitor, but now I cannot get along without reading it, though I have a very busy life.

EVERY true American citizen nowadays needs a reliable and unbiased newspaper which will fearlessly discharge its patriotic duty by defining American freedom and the true idea of liberty. This The Christian Science Monitor has done and is doing, and as a newspaper among newspapers it has no equal in this respect.

I HAVE read all the reprints of letters on the back inside cover of the weekly and monthly periodicals referring to The Christian Science Monitor, but I have not seen an expression of gratitude from any one for the splendid Australian news which is continually appearing both from the Australian cities and London. Owing to the clarity of the articles one is able to quickly review and grasp the situation, whatever it may be, far quicker than from one's local papers, which are full of partisan feeling and are very often blind to the real issue. It has struck me often that the Monitor gives very much Australian news in order to help the world in general to appreciate the problems of the young nation.

Moro co, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

German Translation. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1890, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German. Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, markled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message of sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vet pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the churge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

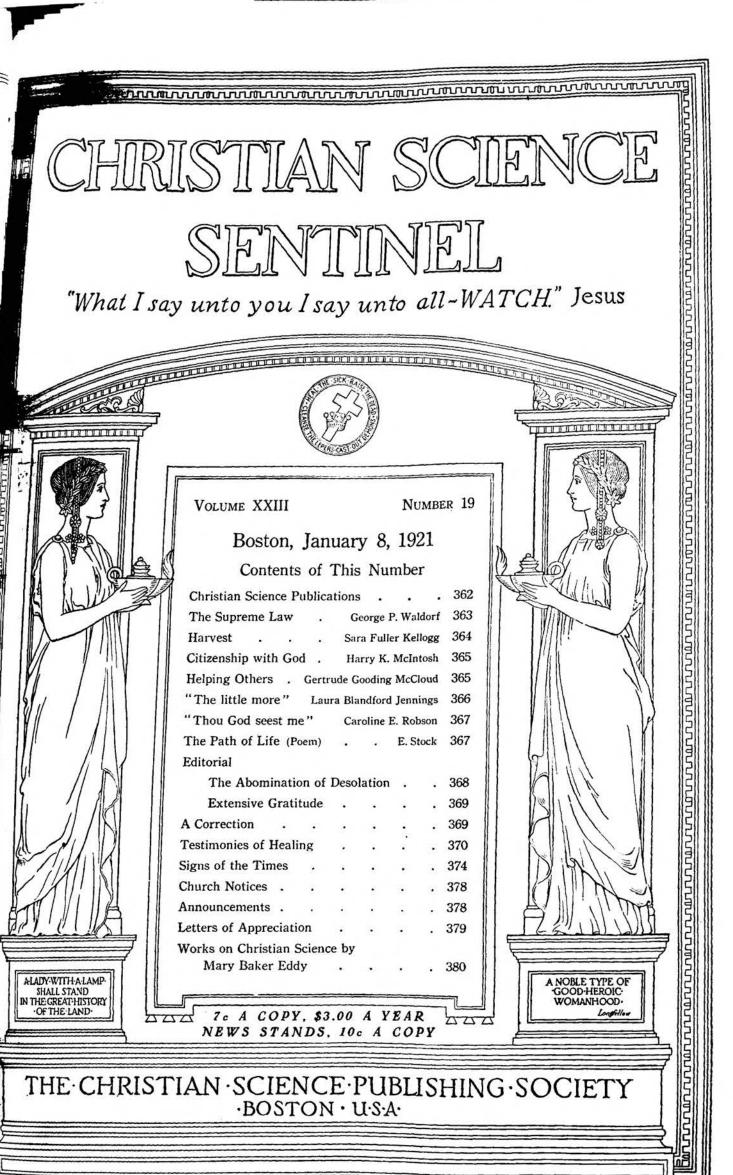

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, BOSTON 17, U.S.A.

The Supreme Law

GEORGE P. WALDORF

In every age of the civilized world there has existed some form of law for the maintenance of order, which was established for the protection of government itself and for the benefit of the governed. Hence it is that the fundamental law underlies the statutes of all civilized countries. It is easily recognized that this is derived from the oldest known law, the law of God, known as the Decalogue, which was delivered to the children of Israel by Moses.

Modern law is for the protection of society, of mankind. It is for the protection of the person, property, and liberty of every man, woman, and child. It is entitled to the respect and obedience of all; otherwise the very foundation of society would be undermined and the rule of chaos would be inaugurated. Such law is the material or physical means by which civilized peoples are governed. Under the safety of such law, a man seeks to attain material wisdom, power, and wealth, hoping to gain through these that which is by him considered to be happiness. In reality all true happiness consists in being in harmony with God, but mankind seek the false concept and seek happiness in matter instead of Spirit.

Twenty-five hundred years ago, the prophet Jeremiah issued an edict from God in the following spiritual law: "Thus saith the Lord, Let not the wise man glory in his wisdom, neither let the mighty man glory in his might, let not the rich man glory in his riches: but let him that glorieth glory in this, that he understandeth and knoweth me, that I am the Lord which exercise lovingkindness, judgment, and righteousness, in the earth: for in these things I delight, saith the Lord." When it is considered to what lengths a man will often go to gain material place, power, and wealth, sometimes smothering the spiritual aspirations in the material, his best efforts would seem to be worthy of a better object. But when we see a man striving for place, power, and wealth, willing to sacrifice honor, self-respect, and even friends to attain these things, then the warning words from Jehovah must come as a bealing balm to the one who is awakening from the lure and mesmerism of the mad race for the things which perish, and is learning to desire only the things which delight his

The Decalogue and the "Thus saith the Lord" from Jeremiah are the high lights shining out of the Old Testament, which reveal the stepping-stones to the higher law which Christ Jesus brought to light. This law we know as Christianity, the law of divine Love, the supreme law, the very law of God. This is the law of Spirit, which is supreme over matter. Nineteen hundred years ago Christ Jesus summarized the foundation of all law to be Love, in the following statement in Mark: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbour as thyself. There is none other commandment greater than

these." Paul, in the fifth chapter of Galatians, declared love to be the fulfilling of all the law.

Christ Jesus, the master Christian, proved the existence of a law then unknown to the world, by giving health for sickness, rest for weariness, life for death, joy for sorrow, and holiness for unholiness. These works are called miracles, and are erroneously thought of as breaking the laws of nature. The world largely holds to this belief, but the light of truth is breaking through this cloud. Mrs. Eddy in the Preface to Science and Health (p. xi) says, "Now, as then, these mighty works are not supernatural, but supremely natural," and she proved it by doing similar works, and her faithful students are doing likewise. In 1875 Mary Baker Eddy presented to the world her great work, "Science and Health with Key to the Scriptures," which teaches that the divine Principle, Life, Truth, and Love, God, is the source of all healing. The spiritual understanding which this textbook imparts she named Christian Science, because it is both Christian and scientific. Properly applied, this understanding demonstrates healing. It meets every human need, spiritual, mental, physical, and financial.

The teaching of Christian Science has revived the healing works of the Master. These works are being demonstrated, as was predicted they would be, in the following statement made by Christ Jesus: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." In the degree in which the students of Christian Science understand its teachings, and gain both the spirit and the letter thereof, the Christ-healing is being demonstrated the world over. Thus is it being proved that the true religion or Christianity is the law of Spirit. It is not a creed. It is not a sentimental, emotional, or superstitious belief. It is the demonstrable, spiritual law of God. It was decreed in the creation of the universe including man, and it is unalterable. It demonstrates the supremacy of Spirit over matter. It confirms the dominion of spiritual man over all the earth. It reveals the error of the human concept or belief that man is corporeal or

Christ Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." He unfailingly proved his assertions and gave the glory to God. Mrs. Eddy, on page 468 of Science and Health, says: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual." Mrs. Eddy's faithful students are proving the healing statements of Christian Science. They give the glory to God, who alone heals.

The healing ministry is the duty of all followers of Christ. Spiritual healing is the whole garment of Christ's gift to the world. It is the operation of the divine Principle, Life, Truth, and Love. The world sadly needs this ministry. The

Copyright, 1921, by The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Massachusetts. Entered at Boston post office as second-class matter. world can rely upon no other. It has tried every nostrum that has been offered, but is finding that only by seeking the Christ-way can every human interest find rest, peace, contentment, and prosperity. The Master's command is, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." There is no other way. All the material wisdom of the ages has never found any other way. This statute was enacted "in the beginning." It is the warp and the woof, the foundation and the superstructure of the divine law.

The practice of this law lifts the Christian above all false beliefs about the flesh and makes him free, as Christ Jesus declared. In this way man comes into his spiritual birthright. This is what the practice and demonstration of Christianity, as taught in Christian Science, means. Its Principle is divine. Its rule is, that man shall use the divine power. It is applicable to all human organizations, to churches, commercial interests, labor organizations, to every form of civic activity. The one line and plummet, "lovingkindness, judgment, and righteousness," is the divine measure for all.

Demonstrating the supremacy of the spiritual over the material is the Christian's work. In I Corinthians, Paul said, "I die daily." This evidently means that he was demonstrating the nothingness of material beliefs, beliefs of life and intelligence in the flesh, of pride, covetousness, lust, animality, hate, gluttony, envy, and sloth, and that the overcoming of these must include the death of all error. In the eighth chapter of his letter to the Romans he describes life as freedom from the law of sin and death. In the fifth chapter of Galatians he declares the fruit of the Spirit to be "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance: against such there is no law."

Christ Jesus was a perfect model of humility. He taught unflinching obedience to the law of God. He was charged with plotting against the civic government of his country, but he was a perfect example of obedience to that government, rendering unto Cæsar the things of Cæsar, and "to God the things that are God's." Following his example, all faithful students of Christian Science will rise above the mesmerism of evil; they will cease to be influenced by it; they will see the light. Aided by their Bible and their textbook they will find "the peace of God, which passeth all understanding." God alone reigns. He everlastingly delights in and exercises "lovingkindness, judgment, and righteousness, in the earth."

Harvest

SARA FULLER KELLOGG

IN the Bible, spiritual development may be interestingly and profitably followed, in one way, through a study of the word "harvest." Its meaning steadily progresses from the material toward the spiritual, but it is metaphysical; therefore its true meaning is revealed only through a study of it in the textbook of Christian Science, "Science and Health with Key to the Scriptures," and other writings of Mary Baker Eddy, the Discoverer and Founder of Christian Science.

From immemorial days, the harvest has been a time of festival and rejoicing. Although it seemed a time of purely material celebration, yet the long months of work in preparation for it and hopeful anticipation of it engendered a deep feeling of gratitude and safety which led thought to lift itself naturally beyond the external to a dawning sense of the spiritual source. In Chambers' "Book of Days" we read, "The harvest home of old England was obviously and beyond question a piece of natural religion." In the Old Testament, the harvest is referred to exclusively as a

time of material benefit. In the New Testament, Jesus gave the word many significant applications to bring out its meaning. In Science and Health (p. 476), Mrs. Eddy says: "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." He saw that the earth's harvest was purely symbolic and he saw so far and so deeply into its meaning that he made it the means of lessons whose true importance has been brought out only in the light of Christian Science.

In the fourth chapter of John we read the story of Jesus' meeting with the woman at the well near Sychar, where the figurative meaning of harvest is brought out beautifully. The disciples, returning from the town with food, to the well, find Jesus speaking with the Samaritan woman. Her receptivity to the truth has called forth some of the most profound utterances of the Master; she is so exalted by what she has heard that she hurries back to the town to share with all who will listen the glorious news that the long looked for Messias has come and she has seen him and spoken to him. The disciples meanwhile have been evidently bent on a material errand only; Jesus raises their thought at once to spiritual heights, illumining the symbol and giving the true idea of food. Then follows the opportunity for a most wonderful lesson. His students have no doubt been thinking it necessary to preach and teach and heal in the city, in order to convert the people there,in other words, that this would be a matter of time; but a single grateful, uplifted heart has brought immediately to the Master's feet not one or two, but many from there, so that to his disciples he said, "Say not ye, There are yet four months, and then cometh harvest? behold, I say unto you, Lift up your eyes, and look on the fields; for they are white already to harvest."

In "Unity of Good" (p. 11) Mrs. Eddy shows a profound insight into the meaning of this episode, for she says: "Jesus required neither cycles of time nor thought in order to mature fitness for perfection and its possibilities. He said that the kingdom of heaven is here, and is included in Mind; that while ye say, There are yet four months, and then cometh the harvest, I say, Look up, not down, for your fields are already white for the harvest; and gather the harvest by mental, not material processes."

In the ninth chapter of Matthew Jesus again uses the metaphysical meaning of harvest. There we read, "When he saw the multitudes, he was moved with compassion." He then brings to the realization of his disciples in a memorable figure the boundless opportunities for spiritual work, and its priceless results open to all who will consecrate themselves to the service of the "Lord of the harvest," for he says, "The harvest truly is plenteous, but the labourers are few; pray ye therefore the Lord of the harvest, that he will send forth labourers into his harvest." In the tenth chapter of Luke he uses the same metaphor with the same intent and meaning, when he sends out the seventy.

In Mark, from an entirely different point of view, the great Teacher, in cursing the fig tree, shows what harvest must universally mean, so revealing the very foundation of metaphysics. He saw that fruitage must be perennial, ever present, that it must be manifest throughout the universe at all times and in all ways. One of the primary meanings of curse is to bring down destruction upon. Now of course Jesus never brought down destruction upon anything but a material concept, for he plainly said, "I am not come to destroy, but to fulfil." Although it was not the time, according to mortal law, for the fig tree's harvest, Jesus took this

opportunity to show that spiritual law, ever operative, demands perennial fruitage or harvest, so that it was only the mortal concept or so-called limited mortal law that he called down destruction upon—the so-called law which says that the season of fruits, or results, must be absent at certain times.

John eventually saw the full import of this mighty truth, for he tells in Revelation of "the tree of life, which bare twelve manner of fruits, and yielded her fruit every month," in other words, perennially. In this light, taking harvest in its true meaning, we see that all fruitage is primarily the expression of divine activity. To till the ground, water, and cultivate it, calls for mental and spiritual activity, and this activity is the true, the real harvest always present. All mental and spiritual activity is but the reflection of the one divine, creative, active Mind, or God. Harvest is therefore simply the result of the unceasing manifestation of spiritual activity.

A man may call it a successful business or an abundant field or orchard yield, or the healing work of Christian Science practice, but the reality is divine activity expressed. In rightly tilling the ground, one expresses intelligence, initiative, courage, perseverance, endurance, patience, and the like, and the spiritual qualities of faith, hope, and, through the teachings of Christian Science, spiritual understanding. Mind or God thus reflected is indeed harvest every day in the year, omnipresence expressed, bringing rejoicing and demonstration.

Citizenship with God

HARRY K. MC INTOSH

NO be a true citizen of one's country is creditable, but it is I not enough. God requires the whole heart, and it is only as one becomes quickened by the Christ, the universal action of divine Principle, that true citizenship is gained. Our Leader, Mary Baker Eddy, was a great exemplar of true citizenship. She gave us a vision of the city of Zion, and through her work enables the student to attain and retain this vision which rouses him out of a self-righteous belief of citizenship into improved conditions; thus the march goes on, until we behold the real city of our God. Mrs. Eddy says (Miscellaneous Writings, p. 147): "The upright man is guided by a fixed Principle, which destines him to do nothing but what is honorable, and to abhor whatever is base or unworthy; hence we find him ever the same,-at all times the trusty friend, the affectionate relative, the conscientious man of business, the pious worker, the public-spirited citizen. He assumes no borrowed appearance. He seeks no mask to cover him, for he acts no studied part; but he is indeed what he appears to be,—full of truth, candor, and humanity."

We may pride ourselves in being considered good community workers, good townspeople, splendid patriots, and our fellow neighbors may regard us as all-around, respected citizens. In all human earnestness we believe the growth of grace we so much desire has come upon us! We therefore continue to build a fortification in our vain imaginings to be praised of men, but unless the deep-seated conviction of humility and goodness, bringing with it a childlike trust in God, has been experienced, we are building upon sand. Mortal mind loves the flattery of itself, "I am a good man." Jesus said, "Woe unto you, scribes and Pharisees, hypocrites!" But mortal mind, being guided by nothing but its own igrorance, cannot heed the warning and, in its haste to finish its man of clay, neglects the strong foundation; so when the winds of its own creating blow and beat, the structure falls. Then mortal man is heard to cry, "Save, or I perish." When

the human mind is sufficiently emptied of false beliefs, it is ready to turn to the ever present divine Mind which saves it from itself by taking away all of its supposed sovereignty; a new man steps forth, ready for his work in this true citizenship, a worker sufficiently humble to begin his work.

The student of Christian Science to-day is living in a wonderful period of the world's history. Old barriers that seemed so real are being swept away before his gaze and the stubborn resistance to the progressive march onward of purification is giving way through the realization of the truth that is based on Principle. The student who is earnest is no longer depending upon a so-called older worker, knowing that all are equally privileged to turn to the one Mind. Personality in its false sense is being obliterated and the voice of error is no longer so persistent in its cry, "My mother, my father, my brother, my sister, my friend, my teacher, my practitioner." And though we are privileged at any time to fulfill the Scriptural command, "Bear ye one another's burdens," it is right only in the sense that it brings each a greater reliance on God where human reliance is lost sight of.

The student of Christian Science is under necessity to obey the Master's command, "Heal the sick, cleanse the lepers, raise the dead, cast out devils," and unless we are obeying these sacred commands there is still needful effort for persistent purification. In the city of Zion there is none sinful, none sick, none dying, none dead. Now a knowledge of this true citizenship will bring forth the results Mrs. Eddy so much desired. Nothing of the truth has changed since the Master walked this earth and fulfilled his mission. He was a true citizen of the holy land and commanded us to do greater works. Nothing can attest our obedience to God more than fruitage. "By their fruits ye shall know them."

Helping Others

GERTRUDE GOODING MC-CLOUD

VERY one who has proved for himself that Christian E Science heals, knows the joy that invariably comes through spiritual healing. At first, his wonder and happiness in knowing from experience that the miracles of olden days are being repeated in our own time, fill his thought so completely that it seems quite impossible to think of anything beyond this. But erelong he finds himself unable to contain his joy, and begins looking about for opportunities to share it. He is surprised, and somewhat astonished, to find that among those to whom he talks there are some individuals who are not only unwilling to have Christian Science applied to their own problems but are not even willing to accept all his statements in regard to its healing power. A little saddened. perhaps even a little impatient at their incredulity, he ceases his endeavors to impart to these unbelieving ones some understanding of the truth he has perceived, and returns to his rejoicing in his own healing.

But in the study of Christian Science one learns that selfishness has no part in God's spiritual child, and if one is seeking to demonstrate the true identity as this spiritual child of God, it is impossible to be satisfied with the contemplation of one's own bettered condition without desiring to have others equally blessed. This desire is manifested in a more loving attitude toward one's fellow man, and in turn this attitude helps many people who are ready to acknowledge the power of divine Love as understood in Science. In trying to live the life of a Christian Scientist, in being faithful in guarding one's thoughts against erroneous judgment, in always beholding God's man despite the mist of mortal, material concepts, one finds many opportunities to give to

those in need of comfort and healing the word that leads them to desire for themselves the good that has been brought into the experience of their friend.

When the time comes that the Christian Scientist is asked to apply his knowledge of the truth to the solution of another's problem, and he does the work effectively, then he learns that the happiness he has felt because of his own healing is small indeed in comparison with the joy of helping others. As Mrs. Eddy says on page 155 of "Miscellaneous Writings": "All power and happiness are spiritual, and proceed from goodness. Sacrifice self to bless one another, even as God has blessed you. Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity."

There may be times thereafter when one's own burden again looms large in the thought, and one may be tempted at such times to think that he would be inconsistent to attempt to help another solve a problem when his own seems so far from solution; but in casting out this thought, through seeing it for what it is,—a mortal sense of pride in seeming consistent in the eyes of the world,—one realizes that he may prove the words of one of our well loved hymns (Christian Science Hymnal, No. 126):—

True, the heart grows rich in giving; All its wealth is living grain; Seeds which mildew in the garner, Scattered, fill with gold the plain. Is thy burden hard and heavy? Do thy steps drag wearily? Help to bear thy brother's burden, God will bear both it and thee.

"The little more"

LAURA BLANDFORD JENNINGS

IN the thirty-eighth and thirty-ninth chapters of Jeremiah there is told in a few verses a story furnishing much food for thought, a story of an obscure Ethiopian eunuch, called Ebed-melech. One can readily imagine how the fierce hatred raging about Jeremiah because of his denunciations of idolatry, how the words of Jeremiah himself, and the king's vacillating stand, must have impressed this man as he went about in the intimacy of the court, though himself only a servant—for the word Ebed-melech is not a name, but simply means "servant of a king." Undoubtedly he thought deeply of these things, and there is nothing in the account to preclude the supposition that he was all the while learning something of the truth about Israel's God.

A slave he was, yet when he heard that Jeremiah had been taken from the court of the prison and cast into an empty well, "and in the dungeon there was no water, but mire: so Jeremiah sunk in the mire," he courageously went to his master, Zedekiah, and told of the situation which this king of Judah was too indifferent or dishonest to be concerned about. Then when Ebed-melech had secured the king's command to take thirty men and ropes and rescue Jeremiah, he took also "old cast clouts and old rotten rags, and let them down by cords into the dungeon," and said, "Put now these old cast clouts and rotten rags under thine armholes under the cords." Then they drew him up. It was a true example of

... the little more and how much it is! And the little less and what worlds away!

of which Browning tells us, and can best be named as lovingkindness, the kindness which has its root in love, the mercy which is the ideal of justice. How beautiful such a quality is, and how it refreshes us to contemplate its expression! And justly so, for it emanates from the divine Mind and is Mind's reflection, and without such expression we can never claim the sonship which gives us dominion.

Since God is Love, and Love in this sense is not a quality but a synonym of divine Principle, then Love's qualities are elements of the nature or character of Love. The qualities of Mind are easily seen as intelligence, alertness, activity, discernment, truthfulness, and the like, and Love's essential characteristics are purity, mercy, selflessness, fidelity, and so on. In "Science and Health with Key to the Scriptures" (p. 579) Mrs. Eddy has given this last named quality as the first of her definitions of Abraham, as follows: "Abraham. Fidelity; faith in the divine Life and in the eternal Principle of being," and the Bible speaks of him as "the friend of God." Now friendship, we know, implies reciprocity, and thus divine Love, whose quality of fidelity "the friend of God" so clearly reflected, is revealed as the Friend of man, the faithful Friend.

As early as in the book of Exodus we find loving-kindness or long-suffering mentioned as one of God's attributes. The psalmist makes several appeals that God reveal Himself truly in "mercy and truth," that He may be understood and adored. The American Revised Version of the Bible uses the term loving-kindness uniformly when referring to God's love for man, and in the eighty-ninth psalm alone the word recurs six times and usually in conjunction with the word faithfulness. Indeed no Christian Scientist, however slight his knowledge or limited his experience, could fail to concur in the thought expressed in Hymn No. 194 of the Christian Science Hymnal, so familiar to us all:—

There's a wideness in God's mercy, Like the wideness of the sea; There's a kindness in His justice, Which is more than liberty.

When we contemplate the love of Love, His purity, gentleness, compassion, and faithfulness, we would indeed be ungrateful if we did not yearn to do "the little more," as did this Ebed-melech.

It was so easy for Zedekiah to fear the ravings of mortal mind, to yield to the importuning of opportunism. Ease in matter! It is the chief desire of mortal mind. It was along this line of least resistance, too, that the king took his course to destruction; and the study of his type of thought, in the history of his reign, as it is recorded in Jeremiah, is interesting indeed. But Ebed-melech had begun to unfold to a sense of life which does not mean material ease. He was portraying the beautiful picture of the garden of thought which Mrs. Eddy has given us in her article on "Fidelity," found on page 343 of "Miscellaneous Writings," where she says, "Warmed by the sunshine of Truth, watered by the heavenly dews of Love, the fruits of Christian Science spring upward, and away from the sordid soil of self and matter." She then continues to ask some pertinent questions as to just what care we are taking of our gardens of thought.

In gentle humility Ebed-melech could have given a good report along these lines, and the proof of his oneness with the Love which is the source of all true loving-kindness was not long in coming, for immediately, even while Jeremiah was still imprisoned, "the word of the Lord came" to the prophet and he was told to tell Ebed-melech that although he should see the destruction of that evil place, he himself would be delivered. Jeremiah needed a friend, and the Love-reflecting thought of an Ethiopian met his need. Ebed-melech loved

of the same promise.

God, good, and Jeremiah knew that the same aims and hopes

united them-Jew and Ethiopian-in a bond which gave

each renewed courage and hope; thus they were indeed heirs

How gladly do the Ebed-melechs of to-day subscribe to

How vast its power may be;

Nor what results enfolded dwell

"Thou God seest me"

WHAT a wondrous thought is this, "Thou God seest me," as uttered by Hagar, and when considered from the

right standpoint what comfort and joy it brings! Before the

light of Christian Science dawned on the world, this text did

not invariably bring either joy or comfort. In our old pagan

belief of God as merely a magnified mortal, the thought that

His searching eye was upon us, spying out all our ways and

seeing us when we transgressed His laws, and that He would

certainly punish us for every such transgression, was some-

times far from reassuring. There were some of us, no doubt, who in times of sickness or sorrow derived a certain

unfounded sense of consolation from the belief that God

was conscious of these afflictions (even if He did not actually

cause them), but what a broken reed was this on which

to lean! It left the stricken heart tremblingly awaiting

the next and perhaps more severe trial, and without any

hope of a cessation of these happenings, till death in some

mysterious way ended them, and all we could do, appar-

ently, was to try and be cheerfully resigned to our fate,

until in His good time He removed the affliction which in

The rejection of this theory often seems a stumbling-

[367]

we see our brother man, and no matter what suggestions of disparagement or malice mortal sense would impose on us, these must give place to the perfect model. Can any thought be really more blessed than this, that in all places, under all circumstances, God sees only His idea, man, and that as we "put off the old man," and are born of Spirit, we can forever rest in the consciousness of our Father's all-seeing eye, know-

ing that He is "of purer eyes than to behold evil," so what He

sees is only good eternally.

Mrs. Eddy says in "Unity of Good" (p. 6): "The Science of physical harmony, as now presented to the people in divine light, is radical enough to promote as forcible collisions of thought as the age has strength to bear. Until the heavenly law of health, according to Christian Science, is firmly grounded, even the thinkers are not prepared to answer intelligently leading questions about God and sin, and the world is far from ready to assimilate such a grand and all-absorbing verity concerning the divine nature and character as is embraced in the theory of God's blindness to error and ignorance of sin." But surely as each individual Christian Scientist grows to a fuller realization of this verity,-that God sees good only,-the whole world will be more and more prepared to assimilate this life-giving truth and to awake out of its dream of darkness and chaos. Should we not, therefore, each of us strive so to live as to manifest the perfect man? Dwelling "in the secret place of the most High," we shall gain the spiritual vision which is

[Written for the Sentinel]

hidden from the material senses, and we shall see as God sees.

The Path of Life

E. STOCK

HE path of Life leads ever on, Into eternity, Attended by a joyous song Of immortality.

'Tis true the path is often steep, And oft it seems quite dim. It seems to lead through waters deep Beneath the mountain's rim.

We travelers upon this road Oft find our path beset By persecution's stinging goad, And Truth with laughter met.

This way of Life leads ever up, And by its waters clear We willingly take up Love's cup And drink it all, nor fear.

Truth bids us turn our gaze above, Nor count the steps of pain, But clasp our staff of heavenly love, And e'er our hope retain.

Then as the night turns into day, Beside still waters pure, We find how smooth has grown the way, Press on with footsteps sure.

For every pain we find surcease, For doubt conviction true. In understanding's joyous peace, We find He always knew.

The tears and sighs with which we trod The rugged way alone Are compensated with His rod, Which all the light has shown.

The Abomination of Desolation

THE great difficulty of the ordinary student of the Bible in dealing with prophecy, lies in the misconception which commonly exists as to what prophecy strictly means. The word prophecy has been as barbarously used as the word miracle. For just as miracle is derived from a Latin word which ordinarily meant demonstration, so prophecy is derived from a Greek word which meant explanation. When, therefore, the word miracle appears in the New Testament it means a demonstration of the power of Truth; and when prophecy is met with it signifies the ability of the individual to explain the metaphysical meaning of the Scriptures. Thus Paul, writing to the Corinthians, "For we know in part, and we prophesy in part," simply intended to imply that a partial knowledge could only be accompanied by a partial explanation; and, a little later, he makes this perfectly clear in saying: "Follow after charity, and desire spiritual gifts, but rather that ye may prophesy. For he that speaketh in an unknown tongue speaketh not unto men, but unto God: for no man understandeth him; howbeit in the spirit he speaketh mysteries. But he that prophesieth speaketh unto men to edification, and exhortation, and comfort." This, of course, is merely another way of saying that it is no good speaking to the man in the street in the absolute language of the oracles of God, since the listener would be compelled to have sufficient metaphysical understanding to grasp the meaning, but if these oracles were reduced to prophecy or explanation, then the understanding of those that heard would be complete.

Probably as good an example as could be given of what this means occurs in the references in the gospels to Daniel's oracular statements on the subject of "the abomination of desolation." Daniel's statements were entirely over the head of the man in the streets of Babylon, and, indeed, they seemed to have been a little puzzling to the evangelists themselves. Thus the explanation of Matthew has commonly been held to refer to the desecration of the temple, in the time of Antiochus Epiphanes, when an altar to Jupiter was erected on the altar of burnt sacrifice. This, however, though it would agree with the statement by Mark, by no means agrees with the statement of Luke, where the historical reference seems clearly to be to the siege of Jerusalem by the Romans. It is in a maze such as this that the effort to trace prophecy historically nearly always ends. But when the effort is simply to explain the spiritual meaning of the oracle, no difficulty follows. And it must be remembered that the Greek prophet did not invent the oracle, but merely explained its meaning to the worshipers.

The truth of the matter is that it must not be forgotten that the Jews used the Bible not as a historical book, but as a book the historical references in which could be made to illustrate spiritual lessons. This is brought out with absolute clearness in the reply of Origen to the attack of Celsus, where the prophet, or the commentator, taking the original text of Genesis for his oracle, shows that the Jews were not com-

manded to imitate the bloodthirstiness of the conquest of the Land of Promise, but to find in this bloodthirstiness a metaphor for the total destruction of their own sins and vices. What are known as the Messianic prophecies of the book of Isaiah illustrate this even better. They constitute an oracle, but that oracle had to be explained to those without spiritual perception enough to read it for themselves, and this was done by the various commentators upon it. In other words, the writer saw clearly the conditions which would face the man who first understood the nothingness of materiality sufficiently to condemn sensuality to the world's face. Thus he spoke of him as smitten and afflicted by men. And thus he portrayed him as a virgin's son, since he knew that only such extreme purity could expose the unreality of the material counterfeit so as to wound it unto death. But in drawing this oracle he did not refer to Mary of Nazareth nor to the child Jesus. He referred to the conditions which would come about when the purity of such a mother was combined with the demonstration of such a son.

Now the oracle of Daniel is such another oracle, and if the effort to explain it historically is set aside, the metaphysical meaning is simple enough. Just as the writer of the Messianic prophecies had looked forward to a period when a virgin should come, pure enough to give birth to the man who was to be termed the Christ, so the writer of Daniel portraved a time when evil should rear itself in the most sacred place, when, indeed, the times should be so evil that "none of the wicked shall understand; but the wise shall understand." In that day, says the evangelist, explaining the oracle, "Let them which be in Judæa flee into the mountains;" in other words, let the man who finds himself surrounded by this wickedness find his safety in that understanding of Principle which is typified all through the Bible as the high place or the mountain. If, at that moment, the wise man who understands is on the housetop, let him not descend into the house. If he is in the field, let him not turn back to pick up any material garment. In conditions of such appalling wickedness safety is to be found only on the housetop of demonstration or the mountain top of spiritual realization, in an understanding of the nothingness and impotency of evil.

What all this means, Mrs. Eddy has made perfectly clear in Science and Health. On page 588 she defines hell as: "Mortal belief; error; lust; remorse; hatred; revenge; sin; sickness; death; suffering and self-destruction; self-imposed agony; effects of sin; that which 'worketh abomination or maketh a lie;" and in these words she indicates that the abomination is the quintessence of sin. This quintessence of sin has no doubt manifested itself many times upon the earth, and whenever it has done so, the abomination of desolation, spoken of by Daniel the prophet as rearing itself in the holy place, has been seen. Some such effort of evil is liable to manifest itself whenever the pressure of Truth becomes sufficiently strong to force it from under cover. Thus, on page 96 of Science and Health, Mrs. Eddy writes: "This material world is even now becoming the arena for conflicting forces. On one side there will be discord and dismay; on the other side there will be Science and peace. The breaking up of material beliefs may seem to be famine and pestilence, want and woe, sin, sickness, and death, which assume new phases until their nothingness appears." The pressure of Truth is such that when it becomes sufficiently powerful, evil, like the madmen in the tombs, must come out and scream, "Art thou come hither to torment us before the time?" Lust, hatred. and revenge plead first with Truth not to strip away the mask, and, failing in this, become furious and would stop at nothing short of murder. That is what happened when, in

the first century, the Christ, Truth, fell with such scorching effect upon the hypocrisy of the Jewish hierarchy that they could only answer by plotting the death of the man to whom they attributed their exposure. The same thing has been seen historically many times since. It was seen when the hierarchy of his day vented their impotent wrath in scattering the ashes of Wycliffe to the wind. It was seen when ecclesiasticism set itself up to crush Luther as it had crushed Huss. These instances might be taken as historical fulfillments of the oracle just as much as the action of Antiochus Epiphanes or that of the legions of Titus. But the actual fact is that the oracle refers to a condition of things that may occur at any moment in the battle between spirit and the flesh. "Marvels, calamities, and sin will much more abound," Mrs. Eddy writes on page 223 of Science and Health, "as truth urges upon mortals its resisted claims; but the awful daring of sin destroys sin, and foreshadows the triumph of truth." FREDERICK DIXON.

Extensive Gratitude

How many people have reasoned out what they mean when they say they are grateful? The more they have tried to analyze humanly their feeling, the less they may have understood of the essential quality. A surge of human emotion is not the true activity which is acceptable to the divine Mind. As Mrs. Eddy says on page 7 of Science and Health: "Physical sensation, not Soul, produces material ecstasy and emotion. If spiritual sense always guided men, there would grow out of ecstatic moments a higher experience and a better life with more devout self-abnegation and purity." When human ecstasy, mistakenly assumed to be thankfulness, degenerates still further into a mere form of words uttered with fervor, it is the very reverse of actual appreciation of Principle.

Activity of the spiritual man which is pleasing to his creator is gratitude. To declare, "I am grateful to God," is to say practically, "My living is acceptable to divine intelligence;" for only in proportion as the second statement is true is the first any more than a conventional phrase. One needs, therefore, to be modest even in one's avowals of thankfulness. It is, on the other hand, a superfluous and misleading admission to exclaim, "Words can never express my gratitude for Christian Science." Words are one means of expression. When words and deeds, thought and action, coincide, then words are valuable as the expression of Principle. What the divine Mind knows of words is good and must be demonstrable here and now. The human belief about words as limited symbols has to give way, therefore, to the entirety of the spiritual idea. In the divine consciousness, expression is not divided into words and acts; but the true understanding is identical with the true practice. The fact is that words can express the fullness of gratitude only as the mortal sense of meaning is replaced with the immortal truth. Each student of Christian Science must turn his attention to the demonstration of Principle in every way, whether in the choice of courses of action or even in the choice of words.

Genuine gratitude is, to put it in another fashion, a right estimation of what divine intelligence is. The real man, of course, shows forth this right estimation by exactly manifesting Principle. The so-called mortal man, who is but illusory counterfeit of the immortal, can estimate Principle only by turning to it and finding the sense of mortality vanishing, just as the darkness is displaced by light. That is to say, paradoxically, that a mortal can be grateful just in proportion as his mortality subsides before the true activity. It is, then, the spiritual, real man who is truly grateful. His gratitude or ac-

ceptability to the divine Mind is limitlessly extensive, for it involves spiritual agreement with all that the divine Mind includes or knows. In other words, activity pleasing to Mind is likewise pleasant in the experience of the Christ. Right activity is a joy throughout the infinity of the divine creation.

In the Manual of The Mother Church, page 41, Mrs. Eddy says: "He who dated the Christian era is the Ensample in Christian Science. Careless comparison or irreverent reference to Christ Jesus is abnormal in a Christian Scientist, and is prohibited." Since the boundless living, or doing, that is acceptable to God is all-inclusive gratitude, there is no occasion for irreverent comparisons. Divine Principle rightly manifest is incomparable. The fact is that each one who has discerned and relied on Principle is to be commended not for his or her human efforts but for the unfoldment of divine Love which has thus replaced human seeming. As Mrs. Eddy says in "Retrospection and Introspection" (p. 70): "No person can take the individual place of the Virgin Mary. No person can compass or fulfil the individual mission of Jesus of Nazareth. No person can take the place of the author of Science and Health, the Discoverer and Founder of Christian Science. Each individual must fill his own niche in time and eternity."

The student of Christian Science lets his gratitude broaden as he learns how comprehensive the divine Mind is in its unfoldment. He does not need, however, to itemize on every occasion all of his blessings. Nor does he find it necessary to enumerate all of those who in the past have discerned something of the truth and given their understanding to mankind. One who turns to the Bible with the fresh inspiration of Principle rejoices that Saul became Paul and wrote his epistles, that Matthew, Mark, Luke, and John made such faithful records in their gospels, and that the prophets and other writers set down for us what was revealed to them. The main reason for stating one's joy that divine revelation has continually unfolded is that others may apprehend more of the spiritual idea. When there is occasion for such statement, it should be simple, unemotional, and in one's own words rather than in terms that others have used so repeatedly that the fundamental meaning has seemed almost lost.

To recognize the quality of consecration that enabled Mrs. Eddy to discover and explain the divine Principle of Christian Science is a happy experience. Many who turn to Christian Science have thought themselves prejudiced against Mrs. Eddy. When they learn how thorough and exact she was in her presentation of the truth for the benefit of all, any hesitancy in appreciating her loving activity gives way. Finding the understanding of Principle, which they owe to her work, practicable for the healing of disease, the overcoming of limitations, and the proving of progress of every sort, they are ready to rejoice that she indeed has her "own niche in time and eternity." Day by day their gratitude for Principle and its unfolding expression becomes more extensive, as they go on with their quiet and sure demonstrations of Christian Thus they sooner or later must know through experience that the sincere and consistent using of Christian Science in all activity is itself tangible gratitude, "holy, acceptable unto God," because it is truly "reasonable service." GUSTAVUS S. PAINE.

A Correction

In the Bible Lesson, Subject: SACRAMENT, for January 9, 1921, published in *The Christian Science Quarterly*, the twelfth reference from Science and Health (Section III) should read 33:31 (to end of paragraph only, instead of to line 17 next page).

Testimonies of Healing

For about five years before turning to Christian Science I suffered from stomach trouble. I consulted and had treatment from different doctors, but received no help. About this time a growth appeared, and medical aid was again sought. An operation was advised to which I consented. However in four months' time the old fear returned. This was in 1906, at which time a dear friend, who had been healed through Christian Science a year before, came to see me and told me the good news of God's blessings. She went with me to see a practitioner, with the result that I was healed of stomach trouble in one treatment, but that which I most feared stayed with me longer. I bought a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and studied it, with the Bible, and this growth disappeared. What I am most grateful for is some degree of understanding of God's perfect creation as given in the first chapter of Genesis, and of His ever presence as divine Principle.

The writing of this testimony brings to thought many beautiful healings which I have experienced, such as that of dislocated ankle, pleurisy, floating kidney, and many other ailments. I am grateful for the spiritual uplift, and to the kind practitioners who helped me to understand the truth as taught in Science and Health.

(Mrs.) MARY CLARK, Portland, Oregon.

4

When the year 1911 dawned it found me in ill health and feeling a keen sense of disappointment that the church of which I was a member had failed to answer the questions of young manhood, and did not satisfy my longing to know the truth about God and man. Moreover, I was suffering constantly from the dull pain of an internal derangement and it was when in this unhappy condition that a friend told me of the healing and happiness which Christian Science had brought into his life, I decided to investigate the subject, with honest willingness to test it on its merits.

The first interview with a Christian Science practitioner convinced me that I had at last found the logical, practical religion of the New Testament for which I had longed, and in his explanation of God I saw the answers to my questions. Proof of the correctness of this new vision of Truth came at once in the cessation of the pain which had been wearying me for months. I commenced the study of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and soon found that the truths unfolded were demonstrable. Life was completely changed for me as a new usefulness was indicated, and health rapidly returned. A stomach weakness which had troubled me since childhood and which seemed to cause frequently recurring bilious attacks was healed, and I do not recall having had a single attack since.

In the autumn of 1915, whilst drilling, I fell and severely strained myself. A large and intensely painful hernia was immediately apparent, but as I felt it afforded me the opportunity of further proving what I knew of Christian Science I decided to take up the work for myself. The pain yielded quickly but there was no appreciable change in the physical manifestation. Some three months later I was examined for military service by three doctors, who certified me as unfit for any but duties of a sedentary nature. In a further two months, when I joined the army, the examining medical board placed me in the lowest medical category but

one, and the officer in charge urged me to undergo a surgical operation at once, as he assured me that I was no use to myself or any one else in that condition. I knew I was improving, and stuck to my work in Christian Science, with the result that toward the end of 1917 I was able to ask for examination by another medical board, as I felt I was then perfectly fit for full service. That examination was a very thorough one and I was passed as quite fit. On being transferred to a crack regiment in which the standard of physical fitness was very high, I was again subjected to a stiff test by an eminent doctor, with the same satisfactory result. Having my previous record before them, these doctors expressed their surprise at such a healing, but with all their testing they could find no trace of displacement or weakness. Whilst on active service in France I had frequent occasion to handle and carry ammunition and other heavy objects up to 240 pounds in weight, and I was able to accomplish successfully some intensive digging in chalk soil,-which is probably about the severest test any one could have,without feeling the slightest strain, and I am still enjoying the same freedom and strength.

To me this is a very definite and positive proof of Christian Science healing, as I wore neither truss nor instrument of any kind, relying wholly on the truth as my support and healer. I am indeed grateful to God for this new-old religion; I am grateful for a growing appreciation of the courage, love, and wise provision of our dear Leader, and perhaps most grateful of all for an increasing apprehension of her admonition to turn from personal sense to Principle in all things, always.

CLIFFORD J. HARRISON, London, England.

Before taking up the study of Christian Science, it was thought that I could allow only a short time to elapse without taking a certain medicine, and if I failed to take it I would surely have something the matter with me. I am grateful to say I have not taken any medicine for over five years, nor have I had any other treatment than Christian Science. I have been healed of influenza and of other ills too numerous to mention. I am truly grateful for Christian Science.

(Miss) INEZ APPLEGATE, Sacramento, California.

4

In September, 1917, while preparing to go south, I became very ill. My husband was not interested in Christian Science at that time, and a neighbor suggested that he call a doctor. The pain was so severe that I did not care very much what was done.

As the house was rented and the tenant waiting to move in, I suggested going to the hospital, where I could have a private room and quietness, but with the understanding that I wanted no medical aid. The doctor who had been called informed my husband that an immediate operation was necessary, and then added that he should prepare for the worst. We did not consent to an operation, although we learned afterwards that all arrangements had been made for one.

After deciding to go to the hospital, I asked for my Bible and Science and Health and requested my husband to call a practitioner and tell her where I was going. After a while the sweet message came from her that if I wished to, I could go to her home. Divine Love was guarding me all the time, for if the call for the ambulance had been promptly answered I would have been at the hospital before receiving the practitioner's message. I went to her home and there

found "the peace of God, which passeth all understanding." A complete healing was realized in about three weeks. I have had numerous healings since then, and all that we have and are to-day is due to the teachings of Christian Science.

I want to express my love for God, and my gratitude to Mrs. Eddy, and to those who helped me in time of need. (Mrs.) HENRIETTA CORRELL, Lancaster, Pennsylvania.

I have been a recipient of a beautiful healing through Christian Science. I was suffering from a very severe case of tonsillitis, which was accompanied by high fever, and was unable to take nourishment as it was impossible to swallow. My parents telephoned to a Christian Science practitioner for help. The following day the fever had disappeared, I had slept well the whole night, the pain was very much relieved, and although the throat was still somewhat swollen, I was able to eat anything I wished. On the following day, the second day of treatment, I was completely healed and able to get up. No indications of inflammation remained, and I felt perfectly well. I am very thankful to God and grateful to His faithful messenger, Mary Baker Eddy.

(Miss) Walda Wolcke, Rissen a/Elbe, Germany.

This testimony is sent in gratitude for all that God has done and is doing for me through the study and application of Christian Science. When it was first brought to my notice I was suffering from a supposedly incurable internal trouble, due to climatic conditions in a hot country, and was a physical wreck. I was sent from place to place and had many doctors who were kindness itself, but who pronounced my condition hopeless if I continued to live in the East, and I was finally sent to England. After eighteen months, and not feeling much better, I met a friend who told me of Christian Science. We had not met for some years and it was a great surprise to see her well, instead of suffering. I then felt convinced that if God healed one, He would not withhold the healing from another. This caused me to read and to try Christian Science with the hope of healing, also to learn more of God's power and willingness to heal.

The parting of the ways came and I had either to trust divine Love entirely for my safety and my health, or to depend once more on drugs and other material methods, which so far had not proved beneficial or effective. The tenth verse of the third chapter of Malachi was my support, and with the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I decided to go out East once more, and shortly after this I was again in the very country I had been warned would be fatal to me were I to return to it. In a short time fear left me, medicines were discarded one by one, and my outlook on life, completely altered, gave me fresh hope and courage. The Bible opened as a new book, and from the study of Science and Health the realization of man's unity with God so filled me with confidence that fear of disease lost its power, and healed me then, though I was not fully conscious of this until some other things such as severe headaches, indigestion, jaundice, and fever had yielded to some measure of understanding of God's unlimited love and the powerlessness of disease through God's law of eternal good. Then I knew the internal trouble had been overcome, that healing had taken place, and that neither climate nor country had any power to make God's child sick or diseased. All this time the Bible and Science and Health were my only helpers because I did not even know that there were prac-

titioners to whom one could turn for help, and certainly not another Scientist, though after a while I met several to my joy and comfort.

This was eight years ago and the cure has been complete and permanent. I can do more now than I have ever done, without fear of fatigue or illness, which used previously to possess me. Instead of succumbing to the former idea of ill health in the East, I stayed there five happy years before I again returned to England. This return was during the war, and many blessings too numerous to relate accrued to us. Besides the protection at sea when the submarine menace was at its height, amidst the most strenuous years of war, in England, when there appeared a lack of sufficient food, our garden yielded abundantly, and we never wanted in many other ways. At one time when alone in our flat for six months, strength and health were given me to do all the daily work in it without a single day's illness to keep me in bed. Peace, joy, and harmony have entered our home. Apart from gratitude for physical healing and all its blessings, is the spiritual uplift which is awakening greater understanding of God as our Father-Mother, and man's indestructible unity with his creator, and that it is Love who heals all our diseases.

My one desire is that I may be instrumental in bringing this truth to help and heal others as it has healed me. Each day the unselfed love and devotion of our dear Leader, Mrs. Eddy, becomes more apparent and fills me with gratitude that through her works the light of God's love has risen, with healing in its wings, upon all who wish to see and take the blessing for themselves. My thanks are also many for the helpful literature supplied to us, especially The Christian Science Monitor .- (Mrs.) Nellie Savi, Bombay, India.

It is with a heart overflowing with love and gratitude that I send the following testimony. Jesus said, "If ye continue in my word . . . ye shall know the truth, and the truth shall make you free." It is about four years since I began to learn of this blessed truth which has indeed made me free from so many things. I had taken medicine almost continually for two years and the doctors had told me I must continue taking it. I had also been having treatments from a specialist, who said the bones of my nose were diseased, and the condition serious. The fear was very great indeed. It was while I was in this disturbed condition that I was asked if I would like to try Christian Science. I replied that I knew nothing at all about Christian Science, but was willing to try anything that would help me. I never shall forget my first few visits to the practitioner. The whole world seemed changed. I caught a glimpse of "a new heaven and a new earth." Oh, how uplifted my thought was. I found I was hungry for the truth and could not seem to get enough of it. Fear soon disappeared, my nose was healed, and I was a new creature. The spiritual uplift was so great that without any effort of his own my husband was entirely healed of smoking.

We had a boy six years old who had from the time of birth worn a truss for a rupture. He was never without the truss excepting while in bed. I told the practitioner about him and he said, "To-morrow I will work for the little fellow." I said to him, "I wonder if I will know when to leave the truss off." He told me that divine Love would remove the truss. The next day the boy dressed himself and was going out when he said, "Oh, mamma, I forgot to put on my truss." I knew at once that he needed it no more, so I told him to run on out, and to thank God for the healing. He has not needed it since and that is almost four years ago. He is strong and healthy, and there has not been any sign of the former weakness.

I want to mention the wonderful demonstration I had of the power of Truth when our baby girl came the year after I began to study Christian Science. For all these blessings and others too numerous to mention I am indeed very grateful.

I am grateful for membership in The Mother Church, also in a branch church, and for class instruction, but most of all am I grateful for the spiritual uplift, for the knowledge of God as Life, Truth, and Love. Words cannot express my gratitude to God, to Christ Jesus the Way-shower, and to our revered Leader, Mary Baker Eddy.

(Mrs.) MARGARET WILLIAMSON, Holtville, California.

4

Having been encouraged and helped so many times by reading the testimonies in the Sentinel, I gratefully send the following account of healing experienced through Christian Science. From the time I was about fourteen years old I suffered from very severe headaches, dizziness, and fainting spells, and was never really well. Several medical practitioners diagnosed my case as that of goiter, and although under their treatment and taking medicine faithfully for five or six years, I failed to obtain relief. I twice tried to take up a commercial career but was forced to give up each time, the doctor assuring me the last time that I could never stand the strain of business. However, thanks to the truth as taught in Christian Science I have been able to prove this verdict untrue.

Christian Science was first brought to my attention in November, 1918. I attended a lecture and called upon a practitioner the following day. I commenced treatment right away, but for the next two or three months every symptom seemed to become aggravated. Gradually, however, with the help of a practitioner I was lifted out of the darkness. In September, 1919, I was able to accept a position without fearing results. I have now been in business for over a year, and during that time I have only had to stay away for one half day. Comparing this with the years previous to hearing of Science, during which time scarcely a week passed without my having to spend a day or two in bed, I cannot say how grateful I am, also to all the friends who helped me to gain some understanding of Science. I am now grateful that mine was a slow healing, though at the time I was often discouraged,—as I was forced to study more closely, and so gained a better understanding of the fundamentals of Christian Science.—(Miss) Dorothy M. Shir-LEY, Bromsgrove, Worcestershire, England.

I have been a student of Christian Science a comparatively short time, but am desirous of testifying to the wonderful demonstration of healing which took place in my home about a year and a half ago, resulting in my becoming a student.

We had been married a little more than a year when a baby came, and no baby was ever loved and wanted more than that baby was, in fact we practically worshiped her. She seemed to be healthy and normal as any baby, and all we were anxious for was to have the board of health pass on her as one hundred per cent perfect. At the age of two weeks, my wife took her to the board of health, and much to our surprise they said she was far from being strong and healthy.

The one question they laid stress on was, "Does she vomit?" Naturally we then looked for her to vomit, and before many days she did, to such an extent that we became alarmed and consulted another doctor, who said the board of health was doing wrong, and completely reversed the instructions as to diet, but the baby grew worse, and still another doctor was consulted, but with no better results.

Finally we took her, at the age of six weeks, to the Babies' Hospital where they informed us that she was suffering from an internal obstruction and that an operation was the only thing that would save her, to which we consented. After two weeks they informed us that she was cured and ready to go home, but the only thing that would keep her alive was mother's milk, which her mother was unable to give to her. The day after we got her home she began to vomit again worse than ever, and we were afraid we were going to lose her after all. It was at this stage that Christian Science was proposed to us by my brother, who is a student, and while not understanding Christian Science I said I would try any thing. The next day being Sunday, my brother and I went to all church, met a practitioner, and made an appointment for that is afternoon for my wife and myself. After a heart to heart and talk with the practitioner, I caught a glimpse of the truth, and then and there gave the baby into God's care, and after :.. a treatment we went home with lighter hearts. That night for the first time since the baby came, we put out the lights. and went to bed and slept the whole night through. Almost immediately after the first treatment the vomiting stopped, and the baby began to eat and sleep better; within three weeks she no longer needed treatment, and the healing has ... been permanent.

It was a source of wonder to the neighbors how the baby improved, and even people who had not known of her illness remarked how bright and healthy she looked. Thus the lesson was brought home to us: "Thou shalt have no other gods before me," for we were making a god of the baby, unconsciously, to be sure, but nevertheless breaking the First Commandment.—James B. Forbes, New York, New York.

About twelve years ago I became a student of Christian Science, after a long period of earnest search for the truth concerning God and man. The physical healings of which I learned did not for some time interest me greatly, as they did not seem to me to be so important as the spiritual awakening, but as truth unfolded I saw that man made in God's image and likeness is perfect now—"every whit whole." For two years I had suffered from a most distressing sensation of congestion in the head, which made living seem difficult, although the condition was not evident to others. I feared to speak of the malady, even to a practitioner. At last, however, I decided to do so, and in that instant I knew that I would be healed, as fear had seemed to be the barrier. The healing took place after one visit to a practitioner.

In 1912 I was told by dentists that my teeth were rapidly decaying, that it would be necessary for me to use dental preparations and have frequent examinations made. Upon leaving the office of a dentist one day I resolved that I would not have any more dentistry done unless it seemed right for me to do so, and on the way home I repeated the "scientific statement of being," as found on page 468 of Science and Health by Mrs. Eddy, realizing that God is All. Time passed, and one day I was surprised to note that more than three years had gone by since my consultation with the dentist. I went to him for an examination that afternoon, and he expressed astonishment at finding nothing needed to be

done. Last year another dentist stated that my teeth were done. Last year another defined in excellent condition and laughingly remarked that there would be no need for dentists if every one had such sound would be no need to denote the teeth. This demonstration has given me cause for rejoicing, as it was so simple and complete.

One of the most beautiful healings I have experienced took place when I was sojourning in a foreign city. I had spent many sleepless nights and had reason to believe that the symptoms manifested were those of typhoid fever. One morning while shopping I was told by the clerks that I looked very ill, and was advised to return at once to my hotel. Instead, I took a taxicab and started for the address of a practitioner whose name I had seen in The Christian Science lournal. Arriving there I found that she had moved away, and no one knew where she had gone. I then had the driver take me to a Church of Christ, Scientist, near by, and in answer to his ring at the door of the church, a man came out and asked if he could be of service. I asked for the address elsale of one of the readers, who was also a practitioner. He gave it and, seeing my evident distress, came to the cab door and eatiplize said earnestly, "I know you will find just the help you need." His face lighted up with a radiant smile as he spoke the words and a sense of peace and comfort came to me.

Arriving at the home of the practitioner, I confidently ab Grisen hter bern ! dismissed the cab and felt that my problem would soon be solved, but to my disappointment, the maid who came to the 地 雅瓦二 door announced that the person I had come to see was out of town for the day. It was growing late, my hotel was several miles away, and I had a fear of becoming unconscious. On to letz : entering an underground railway station I boarded a train and have little recollection of anything more until a certain station was reached, when a spontaneous sense of health and happiness made me a new creature, and I said aloud: "Why, how beautiful everything is, and how well I am. What has healed me?" And instantly I recalled the assurance of the man at the church: "I know you will find just the help you need." The help had come through his right thinking. This experience brightened my entire trip that year.

For many years my health has been well-nigh perfect, and I enjoy a splendid freedom from physical wearinessa freedom for which I am continuously grateful. The study of the Bible is for me a feast of good things in the light of the truth, and I receive great help also through reading the Christian Science periodicals. The Christian Science Monitor has been called "a glorified newspaper," and its glory lies in the fact that it is educating the people with a true education and is destined to bless all mankind.

Class instruction is one of the privileges that has come to me through unfoldment. In conclusion I desire to express my gratitude to God and to Mrs. Eddy for the truth as taught in Christian Science.

(Mrs.) Marion Carolyn Jones, Berkeley, Calif.

When "Science and Health with Key to the Scriptures" by Mary Baker Eddy was placed in my hands, ten years ago, I was not at all interested in it, but in glancing through it I read a sentence which impressed me as a very positive and powerful statement. The book was then laid aside until some months later, when I was suffering from a very severe headache, and, no medicine being available, the thought came to me that if I could find that statement which I had read, it might help. In spite of the argument that I did not know in which chapter or on what page I had read it, and that I would not be able to read it if I did find it, I persisted, got up, found the book and opened it to the very statement I sought,

which is on page 14 of Science and Health, where Mrs. Eddy says: "Become conscious for a single moment that Life and intelligence are purely spiritual,-neither in nor of matter,and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well." I read the statement several times, trying to realize its meaning, and in a very short time was completely healed.

Since that time I have had many blessings and healings, but I am most grateful for the healing of appetite, an ungovernable temper, hatred, malice, jealousy, sensitiveness, and the like, and while there is much room for further improvement I am sure it will come if I put into practice what I know of Christian Science. One very beautiful proof of the power of Truth which I have experienced is that of the destruction of discord in the home. This error seemed rampant, but not until I realized that it was my acceptance of a false concept of my fellow man, and my own wrong thinking which needed healing, and ceased to try to adjust the lives of others and turned the searchlight within, did the healing take place; but I can say that all inharmony has been healed beyond my highest expectations. The statement from Science and Health, beginning on page 476: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick," and the following from "Miscellaneous Writings" (p. 277): "No evidence before the material senses can close my eyes to the scientific proof that God, good, is supreme. Though clouds are round about Him, the divine justice and judgment are enthroned. Love is especially near in times of hate, and never so near as when one can be just amid lawlessness, and render good for evil," were my support in the hours of trial.

The Bible has become a new book to me, and instead of depending upon human will, I now turn to it and there find the needed help. Not long ago a condition arose upon which I had to take a stand. There was much pressure brought to bear to try to make me see that the stand I had taken was the one which would only add to the error which had to be overcome. Before opening my Bible I earnestly prayed that I would be shown whether these arguments were coming to turn me from the right way, and opened it to these words, in the fourteenth chapter of Isaiah, "All they shall speak and say unto thee, Art thou also become weak as we? art thou become like unto us?" With these words came a sense of peace, and I knew that the stand I had taken was the right one-and that I could fearlessly turn away from these arguments, and know that they were only the voice of error trying to destroy the right idea.

Words can never express my gratitude to God, to Christ Jesus, and to our revered Leader, Mary Baker Eddy, for this wonderful truth as contained in the Bible and revealed through Science and Health, and for our wonderful periodicals, which are awakening mankind and healing all their woes.

(Mrs.) KATHRYN F. BRADY, Chicago, Illinois.

I wish to express my gratitude for the help received through Christian Science as given to us by our dear Leader, Mrs. Eddy. Although I did not become interested in it for my own physical healing, trouble with my back, colds, and other difficulties have recently been overcome through the power of Truth. Loving friends and the Christian Science Sentinel have been a great help to me in making clear points that seemed obscure. I trust that these few words, expressing my gratitude, may be of help to others seeking Truth.

(Mrs.) HELENA C. TEDMON, Brooks, Alberta, Canada.

Signs of the Times

["Reaction or Reflection"—The Christian Science Monitor, Boston, U.S.A., Nov. 16, 1920]

Reaction may be defined as response to a stimulus. In relation to humanity it means that if anything happens to a man, he reacts or responds to that happening by doing something else. Ebullitions of temper, jealousy, hate, and criticism are all reactions, while, in the physical realm, disease, especially so-called contagious disease, debility, and so forth, are also of the nature of reactions. The proof of this is that when a person is exposed to so-called contagion and takes no harm it is said that he did not react. The question may then be put why one person should react to disease and another should not. To this the medical profession, in the majority of cases, can give no satisfactory answer. Christian Science, however, gives the answer by showing that the difference is due to the different mental states involved. It shows that reaction is simply the response to fear and is present in proportion to the belief in the reality and power of the so-called material law of sin and death. Christian Science, however, does not enter the realm of mortal mind and try materially to medicate or explain fear and its reactions. Fear in its broadest sense is the belief that life is in matter, a belief which excludes the understanding of the government and protection of Principle, and no good is to be gained by investigating a negation or lack. All that needs to be known is that fear, and all evil, are negations of truth and so illusions. If one desires knowledge he does not investigate false beliefs but goes to the source of supply for the required knowledge. If one suffers from fear, he will gain nothing by merely investigating that fear as though it were derived from veritable source or cause, and the attempt to do so simply proves that he is still accepting its reality. He will gain all, however, by learning of that perfect Love which casts out fear. Thus the exposure, as illusion, and consequent destruction of error, results from the understanding of Truth.

In "Miscellaneous Writings," by Mary Baker Eddy, on page 60, we read, "Every material belief hints the existence of spiritual reality; and if mortals are instructed in spiritual things, it will be seen that material belief, in all its manifestations, reversed, will be found the type and representative of verities priceless, eternal, and just at hand." What, then, does reaction typify and represent when reversed? Reaction, we have seen, is response to a stimulus, but in reality there is only one stimulus, one power, God, Principle. The reaction of man to Principle is best defined by the term "reflection," therefore reflection is the real type and representative of Principle,—reaction the unreal type and representative of error or fear. Thus, in correcting human experience, a man, discerning the power and presence of Principle, reverses reaction and finds reflection.

Suppose we take as a practical example the effect produced on two men by an announcement that business is going to be very bad, that world conditions are spoiling trade, and that failure is imminent. Let us suppose that the first man is governed by fear, is relying on his sense testimony, and is ignorant of Principle. In this mental state he will probably react at once and the result will be depression, discouragement, and probably failure. Suppose, on the other hand, that the second man knows something of Christian Science. He looks through the announcement and perceives that it is only bearing witness to a material sense of business, which sense, if accepted, will but tend

to hide the true idea. He reverses this false sense, and finds the idea of business to be the reflection of the activity of the divine Mind, which can never be affected by any material condition. He then rejoices in the breaking up of the material belief because that breaking up presages the understanding of the true idea. He finds true the words of Mrs. Eddy on page 574 of Science and Health, "The very circumstance, which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares." He is strengthened, sustained, satisfied, and enabled to prove the truth of Jesus' words, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

It was this power of reversing error which caused Paul to say, "To me . . . to die is gain." What could die? Nothing but a false sense, and to get rid of that was undoubted gain. Paul must have understood this or he would not have said in another place, "I die daily." Despondency and depression may suggest that something can be gained by physical death, but Christian Science shows that gain is in proportion to the reflection of Life, and that the understanding of reflection must overcome death.

It is clear that only good can come to man from God, for God is infinite good. All suffering, all sadness, is due to reaction to suppositional evil; the cure is the reflection of good. It is even reaction to be anxious or to hold to a fearful sense of so-called love for others. Who could arrange things better or more lovingly than infinite Love? Could we, if we tried, guide our loved ones more lovingly than Principle? If evil seems apparent, then the fault is with one's self; we have forgotten to reverse the seeming and gain the true idea. This is not an excuse for any one to sit down and say that as nothing but good can come to him he has nothing to do. Infinite Love has set before every man an open door, but the man has to go in, himself. Those staying outside and refusing to enter are, certainly, dealt with in the most loving way possible; with the least possible suffering they are gently led to see that they must go in at the open door, but what are they gaining by waiting outside in the land of suffering? What would they gain by well-meant human efforts which prolonged their stay in that state? The life Jesus led is the way, and "there is none other name under heaven given among men, whereby we must be saved," but every one must enter this open door for himself by living in the same

Walking in this way, reversing error and reflecting Truth, one may find many seeming difficulties. In fact, so long as the flesh seems to exist difficulties must seem to be. Jesus neither chose for himself, nor promised to others, ease in the flesh; he taught, "In the world ye shall have tribulation." To the one seeking pleasure outside the door, Truth says, "You cannot find good where there is no good, and Principle is the All of good." But there is always the rainbow of promise, for did not Jesus continue, speaking of the true reflection of Principle, "Be of good cheer; I have overcome the world."

[From Inaugural Address of President Marion LeRoy Burton of the University of Michigan, in The Michigan Alumnus]

In speaking of the university teacher, President Burton said:—

"Regardless of the consequences to preconceived notions, prejudices, or superstitions, he goes calmly on his way, patiently, painstakingly seeking for knowledge. His joy is to

banish ignorance. His only fear is error; his deepest satisfaction is truth. He kneels at the shrine of truth. . . . Just now his convictions are buttressed by the war experiences of millions of American men. They actually discovered in the war that mind is the master of mankind. They are hungry for information. They are crowding all the schools of the nation because they want knowledge which means life. Today as never before the critic who studies the American university will find in full operation these potent forces. University ideals are the sternest facts with which states and civilizations finally deal. The university says that man can recognize no master but the truth and that mind is a mighty force making for rich and abundant life. 'Ye shall know the truth, and the truth shall make you free.'"

Speaking further of the need of knowledge he says:-

"Finally, the university must permeate the state with knowledge. The people of to-day as never before understand the power which accrues to any one who has the facts and the proper training. The people are literally hungry for knowledge. . . . If we consciously aim to assume our share of the responsibility for the new America, we must remember that knowledge is the property of every man. In a word, we pretend to believe that men must be free. They are only free when they know how to live wisely and understand how to govern themselves justly and efficiently. In our appraisal of America we said that her greatest tyrant was ignorance. If now we are to serve her, we must give her knowledge."

[From "Labor and Revolt," by Stanley Frost]

In spite of its obvious weaknesses, the strength of democracy has proved an amazing thing throughout history, and a stumblingblock to pure logic, on which many near-wise men have broken their shins. Tiny Greece subduing the Orient, timer Rome conquering the world, microscopic Switzerland defying her powerful neighbors through centuries of aggression; these things stand out as miracles. The centralized state, the weapon swung with a single mighty hand, should by all reason be the great instrument of power; against it the disorganized, hesitating, nose-counting democracy should not be able to stand. Yet it does, and will. . . .

General Sherman complained that he had "suffered from many disasters, most of which never happened." . . . To fear the result of the present unrest is to show a basic distrust of democracy, for our democracy is founded on the idea of fundamental and equal justice to all, and its whole development has been in the working out of that idea into practical uses. It is in proportion as we have failed to reach our ideal that our present troubles have come upon us, and as our failures are corrected the troubles will vanish. There can be no doubt of the result.

[From "Will the Wage System Last?" by Henry Pratt Fairchild in The Unpartizan Review]

It is a startling but incontestable fact that if . . . "Whatsoever ye would that men should do to you, do ye even so
to them," "Thou shalt love thy neighbour as thyself," "It is
more blessed to give than to receive"—should ever be generally accepted, a thing which, however improbable, we are
not yet ready to admit unthinkable, every economics textbook in use would have to be thrown into the waste basket.
. . . It is hard for us to visualize a state of society where the
interests of others would have as much weight in determining
conduct as our own interests. Yet it is doubtful whether a
development of human sympathy which would be sufficient
to overthrow all the laws of supply and demand would require any greater progress in altruism than has actually

transpired in the last three or four centuries, as represented by the general humanitarian movement. . . .

It is not necessary for peaceful progress that we should foresee far in advance what the new forms will be. Nor is it desirable that we should attempt to hasten their coming prematurely. To do so would in fact be disastrous. What is necessary is that every thinking man and woman should recognize the transient character of the best economic theories, and should realize that those who impede progress by clinging to an outgrown theory must share the responsibility for any violent upheaval which may come, equally with those who try to force the adoption of new and untried devices before the time is ripe for them.

٠

[From The Abolitionist, the Journal of the British Union for the Abolition of Vivisection]

Our medical correspondent, who may be taken as representing the latest phase of that unstable quantity called the scientific mind, comments upon this pronouncement [The Bacterial Age "Closed"] as follows: "The bacteriological age which has just closed had as its motto, 'Stamp out bacteria and you will stamp out disease.' That doctrine was inculcated into the students of yesterday and was accepted almost without a murmur. The student of to-morrow will hear it, but only as an echo. The truth is that you cannot stamp out bacteria. . . . And—here is the point of revolution—for the most part they are harmless." . . .

Following upon this extraordinary "revolutionary" admission, the same nimble-minded writer quotes Dr. Leonard Hill as follows: "Tetanus and gas-gangrene bacilli washed clean and injected are innocuous"! We have now a curious situation. The contention for which we have fought for years has been that there are no such things as specific germs; that the bacteria or germs which are found in every part of the human body, and which have been labeled by bacteriologists with the names of all sorts of diseases, are absolutely harmless, if not beneficent. This is now practically admitted. The "revolution" (or revelation!) is simply an acknowledgment that we have been right throughout, and that the bacteriologists have been following a Pasteurian will-o'-the-wisp.

[Introduction to a Christian Science Lecture at Halifax, Yorkshire, England]

If everything that one sees and hears at this time is true there never was a stage in the world's history when mankind appeared to be more in need than now of something to overcome the difficulties which appear to surround us at every turn. Without these difficulties being enumerated on this occasion it is possible to see that were we to listen without protest to every voice now enlarging upon present-day problems we might imagine there was very little hope left for the human race. If we ever came to that mental state of despair we should in effect be assuming that God, good, was no longer powerful against the claims of evil, and we should consider ourselves at the mercy of every outward circumstance. Now what individual is going to remain in such a mental condition for long? Mankind naturally protests against being tied down and limited by surrounding conditions, and we would immediately take steps to obliterate anything which tended to mar the harmony of our existence. It is an acknowledged fact that the struggle against wrong, injustice, or misfortune is most effective when there is present the consciousness of being in the right. That being so, the question arises, "Are there any limits to what is possible when we have right on our side and our motives are good?"

It is just here that the Bible and the textbook of Chris-

tian Science, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, throw a flood of light on the subject of what man can or cannot do for himself and others, and hold out the prospect of unlimited possibilities which have been hidden away through the belief that the so-called miracles were the outcome of some mysterious power conferred on a certain chosen few for a limited period of time. If there is any one who doubts that the truth which formed the basis of Jesus' work is still available, it may be recalled that Jesus made a distinct promise in these words: "He that believeth on me, the works that I do shall he do also." Moreover, those immediately around him who were able to perform the same healing works were called disciples, and the word disciple means a pupil; therefore it is not too wild an assumption to suppose there was something those disciples had given to them which could be taught or imparted to

When the full significance of all this dawned upon the Founder of the Christian Science movement, in true Christian spirit she desired to impart her new understanding to the whole world so that it might benefit from her experience. One of her first acts was to write her commentary on the Bible which has been already mentioned, and through it countless multitudes have gained an understanding of the truth that makes man free. . . . Even this afternoon we shall hear enough of Christian Science to be able to put it into practice.

(From the Monneapol's Journal)

There has just been held in Tokyo a World's Sunday School Convention with delegates from every nation in attendance. Not only was the convention held in a non-Christian country but the kindness that helped to make it a success was non-Christian. The Japanese opened their homes to the delegates. They contributed to the expenses. When fire destroyed the meeting place, they unhesitatingly sacrificed convenience and profit by withdrawing an opera at the Imperial Theater and turning the house over to the delegates. Wherever the foreigners went they were received with kindness and respect. Such tolerance was undreamed of sixty years ago. It would have been impossible for the great-grandfathers of these Japanese to conceive such things as possible among a people whose religion the visitors were striving to subvert. Christianity has laid deep its foundations in Japan.

[Significance of Modern Inventions]

In a recent issue of Motor Land it is announced that "the Hamburg-American Harriman steamship combination which announced some weeks ago that they were working on an airship line from Berlin to San Francisco is going to have some competition in the form of a prominent American steamship company which is negotiating with Belgian interests with a view to establishing a line between New York and Brussels. It is planned to employ semi-rigid dirigibles 1020 feet long, with a gas capacity of 6,357,000 cubic feet and provision for two hundred passengers. A keel will form the backbone of the gas bag, while underneath will be the cabins and saloons. The maximum diameter of the bag will be 102 feet. The power plant will consist of fifteen Liberty engines generating a total of 6000 horse power. The estimated speed is one hundred miles an hour, making it possible to run from Brussels to New York in about one day. Fuel capacity to permit a non-stop flight of ninety hours at full speed is to be provided."

"A new record of telephone achievement," reports Telephone Topics, "was made in the course of a demonstration witnessed by the members of the Preliminary International Communications Conference at a dinner given them by the American Telephone and Telegraph Company at the Waldorf, New York, on the evening of October 21. They were able to talk and listen over the line of the Bell system from New York to Los Angeles and by wireless from Los Angeles to Santa Catalina Island, and eastward by wire to an Atlantic port and by wireless telephone to the steamship Gloucester, at sea, and they were also enabled to hear people talking from the ship on the Atlantic by wireless to shore, by wire across the continent, and by wireless to an island on the Pacific."

On reading such items as the above one is prone to think. How much time they save! How much space they eliminate! In reality, though, time cannot be "saved" nor space eliminated, because what are called time and space are the truths of infinity and eternity as they seem to supposititious mortal mind. Truth cannot be eliminated, but this false so-called mind is constantly being eliminated and the truth is therefore becoming more apparent in world activities.

4

[From "Job and His Friends," in The Nineteenth Century and After]

No ready-made solution of the meaning and purpose of existence will ever satisfy the hungry soul; but the heart . . . hungering and thirsting for truth will always find an answer to its thought and experience. One may not be able to explain that answer or give it to another. Each one must find it for himself, and to him it will be enough. He may have to walk through the valley and shadow of death, but a light will spring up in the darkness that can never again be lost. if, like Job, he remains true to what he knows to be true. . . .

The call of Jehovah out of the whirlwind is a rousing call: the whirlwind signifies stirring activity. "Gird up now thy loins like a man" are the words twice addressed to him. The cure for doubt is not to be found in thought alone, but in active service. Those who have doubted God during these years of war and unrest have not been those who have gone out at the call of duty to fight, or to minister to the wounded, sick. and suffering. It is often pity for suffering which is the cause of doubt of the power and goodness of God. But those who are constantly engaged in the noble work of relieving the distressed are too much occupied in practical sympathy for mere pity to make much impression on them. . . . Faith is the result not of meditation but of personal experience. It is not corporate, or catholic, but individual. We may see in the book of Job certain problems, such as that implied in the cynical question, "Doth Job fear God for nought?" or the greater question in which not Job but Jehovah is brought to the bar of judgment. . . . But if this were all, the book would have no immortal and universal value. This it has because these questions are only parts of a great whole, which is the history of the human struggle from darkness to light.

[Prohibition Places Business on a Higher Plane—From the Philadelphia North American as Quoted in Public Opinion]

All the conditions in which the rum sellers find encouragement are transitory and superficial. They avail nothing against the fact that the Constitution declares intoxicating liquors shall not be made or sold in this country, which means that they will not be. And, apart from this, irresistible forces are at work making the status of the traffic steadily more hopeless. When the liquor folk and their advocates prattle of the rise of a favorable public sentiment, what do they think is the influence of the continuous stream of news stories in the daily press of the effects of prohibition—stories

of empty jails, of vacant rooms in almshouses, and deserted alcoholic wards in hospitals; medical reports showing decreases in maladies due to liquor; testimony of social service organizations as to the decline in cases of mendicancy, nonsupport, and family impoverishment?

Does it signify nothing to them that within the last week prohibition has been hailed as a blessing by leaders in three fields—by one of the foremost hotel men of the country, by one of the largest employing executives, and by a prominent

labor organizer?

"Prohibition has put our business on a higher plane," said the head of the Ambassadors Hotel organization. E. H. Gary, of the United States Steel Corporation, cited improved industrial and social conditions resulting from it. William Z. Foster, leader of the steel workers, writes that prohibition benefited the men because they were "clear headed," "did not waste their money on liquor," and, "being sober, avoided useless violence." Recently five hundred union leaders were polled and were found to be, in the face of Samuel Gompers' advocacy of liquor, two to one indorsers of prohibition as a boon to labor. When the liquor folk come to take a census, they will find that their supporters are diminishing, not increasing.

"The good wrought by prohibition among the families seeking aid from charities is direct and unmistakable," says Stockton Raymond, general secretary of the Associated Charities of Boston; "for whereas in former years the number of families needing assistance as a result of intoxicating liquor was always above ten per cent, that being the minimum, this past month, August, out of one hundred and fifteen new applications there was but one due to liquor. In the past year those families which had formerly suffered tremendously owing to the licensing of the liquor traffic have, in most instances, become indisputable reasons for the permanent enforcement of prohibition."

[From "A Teaching Church" in The Hibbert Journal]

Religion is no finished product which can be imparted in a few lessons and retained through life unchanged. It is a living interest or it is nothing. And so the church should be a lifelong school, constantly training its members both in the theory and the practice of Christianity. . . . But if the church is to be a teaching institution it must be a learning institution as well. It can be a worthy ecclesia docens only as it is a faithful ecclesia discens. . . . When the reformers broke away from the old church they found it necessary to go to school again. . . .

But it is not enough for the church to be a learning church and clothe itself in the humility of the true inquirer. If it is rightly to fulfill its teaching function it must turn its eyes from the superficial and unimportant matters that have too largely absorbed its attention and must grapple with really fundamental questions. A frequent criticism brought against the church by the soldiers, according to both reports, is its failure to throw light upon the burning problems forced upon men's minds by the war. Questions of polity and ritual and doctrine, interesting enough to the theologian and the sectary, but wholly foreign to the average man; questions of ecclesiastical authority, of Biblical inspiration, of historical criticism,—all these have their place. But there are times-and this is one of them-when they pale into insignificance beside the greater questions of human life and destiny: the spiritual interpretation of the world in which we live; the possibility of believing in God at all in such a world; the reality of human freedom and responsibility; the validity

of religious and moral values; the nature of the Christian ideal and its practicability in this modern, materialistic, mechanistic age. It may be retorted that such problems as these are as old as human history, and that Christianity has dealt with them over and over again and disposed of them for But the retort is misplaced. Most of the questions that agitate philosophers are hoary with antiquity, but they have to be studied afresh age by age in the light of the new experiences and achievements of the race. Christianity cannot escape the responsibility to reconsider its own traditional solutions. It has taken too much for granted and has allowed itself to become absorbed in things of lesser weight, on the assumption that the greater things were settled long The assumption was never less warranted than now. We have got to re-think the fundamentals of Christianity and of all religion, and in the re-thinking we shall find emerging many things that were not dreamed of in our ancient theologies.

[From "The Pilgrim and His Pilgrimage" by the Rev. George A. Gordon, D.D.]

Negation is a poor affair in the things of the Spirit. You recall the old Greek story of Odysseus. When he was about to sail past the Sirens' Isle, he first filled the ears of the sailors with wax so that they should not hear the song, and then he made the sailors lash him to the mast so that when he heard the song he should not go to wreck following it. There is a pure negation. Some one has said that this is morality against religion. That is not true; there is no morality at all here, only machinery; we have here nothing but wax in the ears and things round the limbs. When Orpheus, the great typical musician of Greece, came and heard the base appeal, he set up a loftier strain, and thus drowned the evil song of the Sirens with the flood of heavenly melody and sailed past in disdain. . . . Our Lord himself never addressed men with negation, never called for surrenders that were mere surrenders, but always invited to duty, to privilege, to cross-bearing, to achievement, to a new world, and a new hope. "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for yourselves treasures in heaven." There is the great positive.

["British Campaign against Vivisection"—From The Christian Science Monitor]

To prepare for a vigorous winter campaign against vivisection, the Manchester branch of the British Union for the Abolition of Vivisection called together its members and friends to an opening meeting and reunion at the Albert Memorial Hall, Manchester. The presiding member said that the war was fought in defense of the rights of small nations, which could at least articulate their wrongs, whereas animals had no voice with which to protest against the torture trough of the vivisection laboratory. Antivivisectionists had gone to war in defense of the rights of animals, who were the weakest section of the community.

Another speaker said that instead of torturing defenseless animals in the false hope of discovering some remedy for physical ills, "ought we not to look within ourselves for the cause of our suffering and ask whether or not it was the violation of divine laws which was at the bottom of our physical troubles." Other and better methods of healing would supersede the present ones, therefore the antivivisection movement was a movement away from materialism.

The editor of the Manchester City News said it was not the hostility of the provivisectionists that dismayed him, but the indifference of the general public, many of whom pro-

fessed to be with them in theory, but did nothing else. People must be roused to a sense of their responsibility in this matter. They must be shown the uselessness of the whole practice, for while the other side produced plenty of statistics, when pressed they could produce no proof of benefit accruing from vivisection. Even the mild experiments excused by some must be condemned, as the idea was wrong, and there existed no justification for the infliction of pain on others for our own benefit. Vivisection begets callousness, as evidenced by the fact that even women were becoming licensed to perform experiments. A clergyman remarked that a great deal remained to be done before vivisection tottered to its fall, but England could never be the great country most of them wished to see her, while this cruelty was permitted in their midst.

[From The Nation]

In the midst of the political reaction in which we live it is both encouraging and necessary to note the steady progress toward betterment of our social conditions along various lines, else would the faint-hearted lose all faith. In the matter of prison reform, for instance, the advance being made all over the country deserves far more attention than it has received.

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Teners.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

*** * ***

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. One such letter follows:

APPRECIATE THE CHRISTIAN SCIENCE MONITOR from the standpoint of a Christian Scientist, endeavoring to be loyal to the completeness of Mrs. Eddy's demonstration, but my work takes me among many people who have expressed appreciation from many viewpoints. Some are for the general standards of the paper, others for little practical things they have used in their everyday life. A clerk in a bookstore told me she was able to to sell a technical work she had not read, because she had seen a review of it on the book review page of the MONITOR. The head of the children's department in a public library was happy to find on the same page a description of a map of fairyland and the address where it might be obtained. A girls'-work secretary in a Y.W.C.A. eagerly grasped an idea from one of the Monitor news items. A librarian in a public school commented on the excellence of its library articles, and on the breadth of its educational page. A community service secretary said that she liked the paper herself for its courageous stand in the fight against medical domination, and that many of the service men who came to the reading room maintained for them liked the Monitor whether they were Christian Scientists or not, because they could trust it. An army chaplain in expressing a desire for magazines and papers for a convalescent hospital said that he wanted good literature, such as good clean newspapers like THE CHRISTIAN SCIENCE MONITOR. A man of wide experience and liberal education in explaining why he read the Christian Science periodicals said it was because they used "such exquisite English."

Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes. Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German.
Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

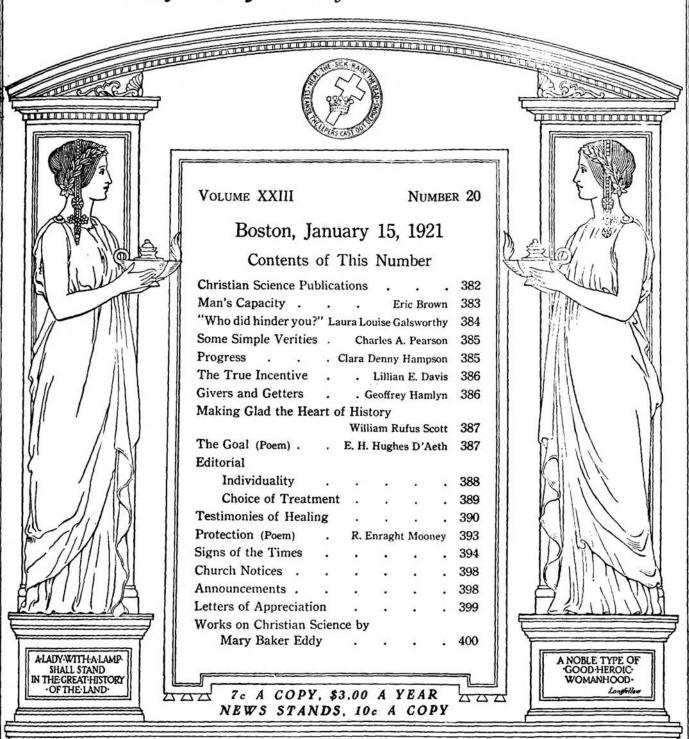

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

LAW AND WORK for the blind. Printed in New York point, American Braille or English Braille, \$1.00.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission have been set to music as follows:

"The Mother's Evening Prayer," 75 cents. "Christ, My Reluge," 75 cents. "Love," 50 cents.

Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents,
"Blest Christmas Morn," 37 cents.

"O'er Waiting Harpstrings of the Mind," 37 cents.
"Shepherd, Show Me How to Go," 37 cents.

"Saw Ye my Saviour?" (Root), 37 cents.

The first three hymns are arranged for high and low voice in the same copy. The last five hymns, are published separately in high and low keys. When ordering state key desired.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, \$1.15; half morocco, \$1.40; full morocco, \$4.50; levant, \$5.50; pocket edition, size 458x634, \$3.50.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, 8-inch (mount 12x16), \$1; 12-inch (mount 15x20), \$2; 16-inch (mount 21x29), \$3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18x24 inches, \$5; on India paper without remarque, \$3.50. Smaller reproduction, size 11x14 inches, on Japanese vellum, \$1.25. Photogravue postcards of the Church Edifice and Publishing House, 5 cents.

BIRLES 01483x Clarendon Brevier, heavy-faced, dis tinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.50.

01440x. Brevier, light-faced type, self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.25.

01633x. Large type Bible, 1044x8 inches, bound in Alaska seal. Specially adapted for use of second readers, \$16.50.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents.

Price List of Bible Concordances and Dictionaries of the linglish Language supplied on request.

Items such as leather covers for the QUARTERLY, and cases, either closed or open, for books, Sunday school supplies and other accessories, will be found in the current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

NUMBER 20

Man's Capacity

ERIC BROWN

THERE are few things that human belief has first ordained and then taken more completely for granted down through all the ages than man's incapacity. A man has been thrust into the world to do or to be whatever limited opportunity and ungovernable circumstances permitted him to do or to be, and no more. So Shakespeare put into the mouth of his cynical Jacques:—

All the world's a stage, And all the men and women merely players. They have their exits and their entrances; And one man in his time plays many parts.

Then he proceeds to give his seven ages of man, beginning with the cradle and ending with the grave.

There is not a single phase of human existence or activity into which this belief of man's incapacity has not penetrated, insidiously or openly, and there settled, arrogantly to rule. A man, it declares, is totally unable to preserve his own existence and his own health and happiness. A man must not work too long or walk too far, and he cannot know matters outside the range of his laborious study. He may grope among the whys and wherefores of spiritual existence or the future life but he can never find them in this world. He must, in fact, continue to march in the great pageant of human endeavor, bearing the arms of his lord or the banner of his guild; he may even ride at its head as overlord or king, but as he enters without knowing why, so he must leave without knowing why and without accomplishing more than a fraction either of his hopes or the needs of his world.

Mrs. Eddy sums up the situation with the most absolute clearness when she writes in "Science and Health with Key to the Scriptures" (p. 374): "You confess to ignorance of the future and incapacity to preserve your own existence, and this belief helps rather than hinders disease. Such a state of mind induces sickness. It is like walking in darkness on the edge of a precipice. You cannot forget the belief of danger, and your steps are less firm because of your fear, and ignorance of mental cause and effect." Now as Christian Science so clearly shows, the lie of a man's incapacity is a lie about the absolute truth of man's capacity to understand God and to do God's work by means of that understanding. The lie of a man's incapacity to know how he lives and moves and has his being, to know how to preserve his own existence, health, and happiness, is countered exactly and sufficiently by the truth of man's inalienable right to know himself as whole, harmonious, and eternal idea, because he is the perfect outcome and creation of that Mind which is perfection, harmony, and eternity.

God's capacity is man's capacity, limitless and infinite. Mortal mind clings desperately to its lies. They are its only stronghold; otherwise, with the Bible in its hand the world would have learned its lesson long ago, for the Bible tells us clearly that every prophet and patriarch spent his time in preaching and proving the capacity of a man to rise above the limitations imposed upon him by mortal thinking and to know God aright. As Mrs. Eddy writes on page 200 of Science and Health, "Moses advanced a nation to the worship of God in Spirit instead of matter, and illustrated the grand human capacities of being bestowed by immortal Mind." So men governed nations, healed the sick, fed the hungry, raised the dead, all by the understanding of man's spiritual dominion over every form of matter when governed by God, and the people marveled at their wonderful works—and forgot.

In the fullness of time Christ Jesus came, and his ministry was one triumphant vindication of man's capacity to understand Life as God, infinite good. By his understanding he destroyed every phase and fashion of mortal law, ending with the sublime annihilation of death itself and the final command to all who came after him not only to do the works which he had done but to do even greater, when the truth should have prepared mankind to expect and understand them. Man's capacity to know God and to do His work, which Christ Jesus demonstrated, dealt mortal belief a blow from which it has never recovered. It rent the very veil of the temple. Henceforth any one who would might know man as Mind's image and likeness; the Christ-example had been given and could never pass away. But still error clung and sensuality whispered, and although down through succeeding ages devoted men and women caught glimpses of the truth and were able to prove for themselves and others some iota of man's capacity governed by God, they were not able to explain it.

But all the while the light was growing gradually clearer and at last there came Mary Baker Eddy out of a life of purity and hope into the great light of Christian Science. A man's capacity to know God aright and to overcome every claim of mortal law was known again on earth, the lives and works of Jesus and the prophets and apostles were made plain and the Bible possessed a key which would unlock its treasures forevermore. On page 393 of Science and Health, in a passage well known to every student of Christian Science, Mrs. Eddy states this so clearly that it is impossible to misunderstand. "Mind," she says, "is the master of the corporeal senses, and can conquer sickness, sin, and death. Exercise this God-given authority. Take possession of your body, and govern its feeling and action. Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man." So now we have the comforting assurance which any one can prove in a small or great degree, that man is here and now guided, guarded, and governed by that one infinite divine Principle which is God, conscious and capable good. What if the necessary proof be of health when sickness seems the only presence? Sickness is only the contradiction of man's capacity to be well and strong as God created him, and it has

Copyright, 1921, by The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Massachusetts. Entered at Boston post office as second-class matter. no more power to deceive him than has the lie that twice three are five instead of six, and that is none at all.

What if the lie of disruption, division, and hatred be abroad in the world as never before? It is only the suppositional opposite of the omnipresence of the one Mind and its one perfect idea, man and the universe; and man's Godgiven capacity to reflect love, unselfishness, and wisdom will inevitably replace and obliterate it. "Spiritual sense is a conscious, constant capacity to understand God," writes Mrs. Eddy on page 209 of Science and Health. No other capacity is necessary or possible, because to understand God is eternal life.

"Who did hinder you?"

LAURA LOUISE GALSWORTHY

EVERY student of Christian Science facing the question, "Who did hinder you that ye should not obey the truth?" when that question is subjected to the searchlight of Truth must certainly give it pause and proceed to an honest if somewhat discomforting examination of the motives and desires that seemingly animate him before a true solution of the question can be gained. The first attempt of mortal mind is ever to excuse and justify itself and so gain time to whisper its insinuations and suggestions, hoping thereby to establish some sense of the reality of its claims before the truth expels and annihilates its flimsy pretensions.

Here, however, let us pause to consider the wonderful lessons taught by our Master, Jesus the Christ, in the narratives given us in the Bible. First, in the healing of the man with the withered hand, second, the healing of the man sick of the palsy, and third, of the man born blind; in these three instances we find the healings were all prefaced with a demand for obedience. This demand was a positive command to each to obey the divine Principle of being, and to rise to recognize the pure spiritual reflection as God's idea. With the definite demands for obedience uttered in the words, "Stretch forth thy hand," "Rise, take up thy bed, and walk," and "Go, wash in the pool of Siloam," our Master swept away any counterfeit laws attempting to fetter a man's freedom, or lying arguments seeming to hold him in bondage, and called forth the recognition of the Christ-idea in its perfection and wholeness, and even a glimpse of this idea healed the sick.

Was it not the instant obedience and selfless loyalty to Principle that gave Jesus this great power and never failed to express complete harmony? Do we as followers of this wonderful Christ-science, when we feel in need of healing, readily and whole-heartedly obey the demand for right thinking, instantly yielding up thoughts it may be of jealousy, possession, love of ease, irritability, self-pity, selfrighteousness, thereby making way for the pure healing that glorifies God, or do we sit back satisfied for the time with ease in the senses, instead of gaining from the experience fresh inspiration for greater endeavors? Just here we need to watch that we do not accept our healing with mental reservations, but only with measureless gratitude. How often we read that "Jesus withdrew himself," and the more we study the words and works of our Master, the more we realize that the withdrawal was ever to gain a closer communion with the Father and thus enable him to return with added power and grace to overcome and eliminate the manifold temptations of the carnal mind. How often do we voluntarily seek in prayer this close communion with our Father-Mother God, that it may enable us to realize more of the truth and so be better able to meet our brothers' need?

It would seem that sometimes we have to guard against the desire merely to pour out all our woes and pent-up wrong thinking while piteously complaining of our sufferings to a practitioner, yet feeling at the same time the relief of this uncovering. Surely to let go, to yield up, is not brought about through any outlet of selfishness, or by shifting our burden to another, but by steadfastly and courageously facing the thoughts that must be intelligently overcome and routed out. That which heals is the word of God, and is one not "making the word of God of none effect" by persistent contemplation and reiteration of error, thereby establishing in belief another power and separate entity every time he associates himself with sin and suffering? In so doing one is "laying aside the commandment of God," "Thou shalt have no other gods before me," and "holding the tradition" of men by arguing for the reality of these false beliefs and man-made laws, which he professes such willingness to part with. When the suggestion of pain tries to localize itself, let us quickly and determinedly deny the possibility that mortal mind can posit anything in any place, or at any time, from any cause. Matter cannot suppose, oppose, or compose; all suggestion must be realized as merely the lying supposition of the physical senses endeavoring to establish their false evidence, and yet how often do we find ourselves pleading on the side of this evidence instead of against it.

All students of Christian Science must recognize the necessity for the deep sincerity required with which to search their thoughts and analyze their motives and see how they square with Principle, and the words of our Leader on page 132 of Miscellany leave no doubt as to the standard of practice required. There she says, "The Christian Scientist knows that spiritual faith and understanding pass through the waters of Meribah here-bitter waters; but he also knows they embark for infinity and anchor in omnipotence." When the suggestion of pain suddenly assails us, it seems so much easier to attribute our irritability and resentment to the pain than it is bravely to accept the fact that the manifestation of physical discord is attributable to some inharmony of thought entertained instead of being vigorously rejected. Incorrect thinking, especially if it coincides with some pet habits not willingly given up, is often justified and excused, but the phenomena of this false thinking expressed as sickness and suffering are indignantly resented and gladly subjected to treatment, and the burden of overcoming is thus laid entirely on the practitioner while the one seeking the treatment sits back nursing a sense of martyrdom, and yet expects good results. Such a seeker needs to study these words of Mrs. Eddy's on page 343 of "Miscellaneous Writings," and if honest he is likely to receive a rude awakening: "Too soon we cannot turn from disease in the body to find disease in the mortal mind, and its cure, in working for God. Thought must be made better, and human life more fruitful, for the divine energy to move it onward and upward."

The sincerity of the desire must always be the incentive that determines the efforts put forth to overcome all error, and the answer to the insistent question that invariably accompanies failure, "Who did hinder you that ye should not obey the truth?" will always be found in the temporary surrender to the testimony of the physical senses either in the form of pleasure or pain. Let us rejoice and be thankful that we cannot hide from the voice of Truth, and that sooner or later, according to our loyalty and obedience to Principle, we must fight out our battles the only way they can be fought out, by an unsparing examination of our motives and desires, so that we finally reach the point where with childlike obedience and happy trust and confidence we willingly yield up

all self-will and fear and lovingly accept the good awaiting our recognition and acceptance. As we realize the loving command to rise up and walk, the demand accompanying it to leave all false concepts behind us and to press eagerly forward will dawn on us and be joyfully obeyed, and the words of Mrs. Eddy on page 118 of "Miscellaneous Writings" should greatly encourage us as we go forward, "Be of good cheer; the warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory."

Thus the echo of the Master's words, which sum up all his superb sacrifice and selfless devotion to Principle, falls softly on our ears and steals into our hearts with the healing balm of Truth and Love, "In the world ye shall have tribulation: but be of good cheer; I have overcome the world." The ideal before us is grand, the striving for the goal is purifying and uplifting, and the ultimate attainment is surely the one thing worth while.

Some Simple Verities

CHARLES A. PEARSON

TO the consecrated student of the Bible and Mrs. Eddy's I works it is quite apparent that the teachings of Christian Science coincide thoroughly with the simple instructions of Jesus. This, however, may not be quite so clear to the beginner. The Master, of whom Mrs. Eddy says, "Jesus of Nazareth was the most scientific man that ever trod the globe" (Science and Health, p. 313), certainly was very practical in his application of his Science to each and every buman problem which presented itself to him for solution. His understanding of God, which was his source of power, resulted in his application of the law of God. This law is not abstruse; indeed, its very simplicity is what seems to render it baffling. It is so simple that one can hardly believe that it will work and accomplish the desire of the suffering to be relieved of the burden of belief calling itself sin or sickness.

In many cases recorded in the Bible, Jesus made his applicants for healing do the very thing which material sense, or mortal mind, said could not be done. When physical sense declared that the man was blind, that Lazarus was dead, that the arm was withered, that the palsied could not move, Jesus reversed the report, overcame the sense testimony with the law of being, and the sufferers were healed. When the multitude were hungry he fed them. In short, he did the thing that was necessary at that particular moment to bring harmony or comfort to his friends. And this is what Christian Science does—it simply produces the right result in the right way.

Mrs. Eddy's statement, "Take possession of your body, and govern its feeling and action" (Science and Health, p. 393), is identical with the command of Jesus, "Stretch forth thy hand." But back of each statement must be the understanding of God as law or Principle. This law is ever present and ever active, and as we "stretch forth" or "take possession" we must know we are doing it in accord with this law. To the degree that the belief in evil is excluded, and the consciousness of good understood, harmony or healing will be apparent, and normal action will resume. Did the man with the withered hand stop to argue the matter, or state that he had been sick a long time and that his case was a chronic one, or that he would be satisfied with a slight improvement from day to day? Jesus knew the law, and knew it so perfectly that his understanding

cleared away any doubt that might have existed in the thought of his patient. "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit, and the disease will vanish into its native nothingness like dew before the morning sunshine," says Mrs. Eddy (Science and Health, p. 365). The Scriptures declare that God is Love, and our Leader's writings make plain the meaning of that very short but powerful sentence. When the practitioner can realize the presence of God, Love, as simply and as fully as did Jesus, then shall be brought to pass another of his sayings, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Progress

CLARA DENNY HAMPSON

THE writer has often been impressed with the likeness of the study of Christian Science to arithmetic. When we first look into Christian Science all seems addition. Health, friends, prosperity, and other blessings pour in on us until we believe all of our problems are in addition and can there be solved. We are satisfied, and hasten to tell our friends, often urging them to join us—for there is only addition and nothing to lose.

About this time we receive a shock. Some difficulty arises that does not respond to the rule of addition. What is the trouble? We begin to doubt, and suspect some evil from others. Some students become superstitious at this stage of progress, while others may fall away from Christian Science. Let us look into the matter. The page has been turned, and behold—subtraction. Many of the difficulties we thought were removed by addition have only been covered up; they are still there. The earnest student now ceases talking and settles down to study; he roots out the false beliefs,—subtracts.

It is sometimes a painful process, but not to be avoided if we desire to go higher. The progress is slow or fast according to the thoroughness of the work; but at last we begin to understand the necessity and patiently labor on until one day we find we have turned another page—to multiplication. With meekness, humility, patience, love, charity, gained through the process of subtraction, we acknowledge God as All-in-all and begin to multiply the exalted thoughts that come to our chastened consciousness. At first we adore secretly, almost afraid lest we have left subtraction too soon and may have to retrace our steps.

As spiritual light increases, our courage and understanding become so multiplied we can no longer conceal them from the world, and division becomes necessary. First a little, falteringly, is divided and shared with others; then more and more until division is established and we no longer withhold, knowing our inexhaustible source of supply. Nothing but voluntary unworthiness can bar our progress into higher realms after we have demonstrated division. Let us go forward then, facing each law of Christian Science without fear or doubt; knowing that the divine Principle is leading us into higher understanding, no matter how difficult the problems of to-day may seem. As Mrs. Eddy says, on page 28 of "Retrospection and Introspection": "For Spirit to be supreme in demonstration, it must be supreme in our affections, and we must be clad with divine power. Purity, self-renunciation, faith, and understanding must reduce all things real to their own mental denomination, Mind, which divides, subdivides, increases, diminishes, constitutes, and sustains, according to the law of God."

The True Incentive

LILLIAN E. DAVIS

WEBSTER defines the word "incentive" as: "That which incites, or has a tendency to incite, to determination or action." Hence it follows that every decision or activity has its incentive. The nature or value of the decision or activity reveals the nature and value of the incentive, so that it is clear that the incentive to harm is evil, while the incentive to help is unselfish and good. What is generally termed the enthusiasm of youth often has actuating it the incentive or desire to attain to some human possession or accomplishment, while the frequent lack of enthusiasm of so-called old age may be due to the belief that one's ability to attain or one's opportunity to possess is exhausted. Now even though during youth such incentive may be unselfish and praiseworthy and may be fraught with boundless good for humanity, still, the fact that it wears out when one needs it most proves that there is something lacking in its nature and foundation.

Mrs. Eddy defines the true incentive as follows, on page 454 of "Science and Health with Key to the Scriptures," the textbook of Christian Science. She says: "Love for God and man is the true incentive in both healing and teaching." And a few pages farther on she follows this with another sentence which links indissolubly the all-inclusive activity of "living" with "healing" and "teaching." In speaking of the duty of the Christian Scientist, she says (p. 458), "He must prove, through living as well as healing and teaching, that Christ's way is the only one by which mortals are radically saved from sin and sickness." Thus, she makes it clear that "love for God and man is the true incentive" for every decision and action.

True incentive is prayer. It is "the longing to be better and holier" of which Mrs. Eddy writes in speaking of the true incentive,—our love for God,—on page 4 of Science and Health. The whole quotation is as follows: "Simply asking that we may love God will never make us love Him; but the longing to be better and holier, expressed in daily watchfulness and in striving to assimilate more of the divine character, will mould and fashion us anew, until we awake in His likeness." Now this incentive can never wear out. It will sweeten, purify, and strengthen the accomplishments of youth and enrich and fructify the most mature experience, just in proportion as one embodies it in unceasing prayer.

Without this true incentive, the most noble character ofttimes becomes discouraged and listless, and the Christian Scientist must watch and be alert, for all too often the human tendency is to be so wrapped up in pleasing human activities, especially when they are going smoothly, that when there is seeming discord, or a consummation of some accomplishment, the incentive to more joyous activity seems absent. We may safely conclude that when our joy seems lacking, we shall do well to examine our store of incentive and renew our sense of love for God and man. Gratitude is an indispensable factor in the true incentive, for joy and gratitude are inseparable, and prayer, of necessity, includes gratitude. Jesus exemplified this in the raising of Lazarus, when he prayed: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always."

The true incentive is a joy in overcoming, a gratitude for God's allness in the midst of seeming discord, and thus the true incentive is the true salvation of man from discouragement, and also from blaming another when things seem to go wrong. In love for God and man there is never blame for another, but such rejoicing as will heal any temptation to blame, and thus heal any seemingly untoward condition or situation. Neither is love for God and man dependent upon human approbation. The approval of a loved one is sweet; the applause of many, tempting. But neither can add to or diminish the true incentive. One's joy for each new day as an opportunity to prove God's love for man and further work out his own salvation, is the joy of the true incentive and is based upon a love for God and man which understands the true nature of God, and man as God's spiritual idea. It is the belief that man is material and finite, with a mind apart from God, that adulterates incentive, or rather, that tempts one to entertain the counterfeit of true incentive which too often includes a desire for human applause, or the belief that one has of himself an ability or intellect apart from God, the one Mind.

To sum up, then: the true incentive to all right and worthy accomplishment, and to welcoming each day as it comes, is a love for God and man which understands the real nature of God and man. It is the unceasing prayer of which Paul writes when he admonishes us to pray without ceasing, and its place is in every heart, along every walk of life, throughout every activity. It is joyful, abounding in praise and gratitude, and it "loses self in love," as Mrs. Eddy says on page 3 of the Message for 1900, where she states: "When a man is right, his thoughts are right, active, and they are fruitful; he loses self in love, and cannot hear himself, unless he loses the chord."

Givers and Getters

GEOFFREY HAMLYN

If any one will cast a glance round his acquaintances and friends he will soon appreciate the fact that they may be divided into two main classes—those who give and those who receive. Not that some will only receive and some only give; practically all must give to some extent as well as receive, but it will be found that some are constantly giving, whilst others are as constantly receiving, or rather taking.

What constitutes the "taking" thought? Is it not selfishness and self-indulgence based on a sense of limitation? And is not a sense of limitation based on a belief in life, truth, intelligence, and substance in matter? The materialist is naturally acquisitive. Believing that whatever is desirable must consist of matter in some shape or form, and that there is only a certain amount of matter available, it becomes his business to acquire as much as possible of the particular form of matter which he covets, and to acquire it by fair means if he can, and failing this, by fraud, or else by force. The fact is that the habitual getter, by which is meant the habitual taker, is a thorough-paced materialist and that his acquisitiveness will yield to the giving spirit only in the proportion that matter ceases to attract, and thus the still, small voice of divine Love is able to be heard, since Love asks only to give, not to get; for Love knows well that it has all.

It is among the many triumphs of Christian Science that it has turned countless thousands of getters into givers. People who were formerly always expecting if not actually demanding others' help and sympathy have been led to seek to help and to extend their own practical sympathy to others. The former selfish invalid, absorbed in his or her well-being, is led to forget this in the prospect of laboring for others out of a loving desire to help. Thus the habitual getter becomes the habitual giver, and "Ich dien" (I serve), the motto of the heir to the British throne, becomes that of the Christian Scientist. For one only gets as one is prepared to give, and thus every giver himself becomes a receiver of good. "Seek

ye first the kingdom of God, and his righteousness," said Jesus; "and all these things shall be added unto you," —a truth which Mrs. Eddy has expressed in different words in "Science and Health with Key to the Scriptures," on page 494, "Divine Love always has met and always will meet every human need."

Making Glad the Heart of History

WILLIAM RUFUS SCOTT

HISTORY has a new significance to the Christian Scientist who has learned that it is a record only of divine creation and spiritual man. Material haps and mishaps, commonly accepted as historic events, are seen to be unreal, and worthy of being recorded merely for estimating relative values in human experience, or for marking the progress toward the full consciousness of man as the son of God.

Keeping distinctly in thought the scientific definition of history, it is both permissible and requisite to note that the year 1921 is the centenary of Mary Baker Eddy, the Discoverer and Founder of Christian Science. To human apprehension her life began one hundred years ago on a New England farm. The year 1821 will more and more be emphasized in the history of our country, and of the world, for the beginning of the revelation of Christian Science. To-day we are enjoying the cumulative benefits of Mrs. Eddy's work, benefits which we believe are unlimited and will lead progressively and universally to the kingdom of God.

When misconceptions about her earthly existence were being spread abroad, Mrs. Eddy recognized the secondary function of history by approving a correct record of her activities, in "The Life of Mary Baker Eddy" by Sibyl Wilbur; but she expected her followers, and sooner or later all others, to gain a truer concept of her being than is obtainable from mortal data. Therefore the real history of Mary Baker Eddy is in her spiritual accomplishments. She indeed desired to be remembered for nothing else.

According to the foregoing view, Mrs. Eddy would be classified as a historian, for her writings have given to humanity more real history than any other books, except the Bible. Her instinct for the real caused her to choose as the basis for her religion the record of creation found in the first chapter of Genesis, and to reject the subsequent material record as false. Hence, Christian Science is a religion founded upon the truly historic fact that real man is made good and has been doing right always. She revealed that the so-called miracles of Christ Jesus were simply proofs of her premise, and that the Bible as a record of human generation and events has no more value than other accounts of temporal affairs; but that as a record of the truth operating through man for universal salvation and to the glory of God, the Bible is real history.

Secular historians are beginning to see the distinction between false and true history. The belief that deeds in the flesh constitute veritable events is yielding to the knowledge that only as a man transcends material sense does he begin to make history. A murderer does nothing historic, whereas the peacemaker does. Constructive efforts are facts in history, while destructive motives evaporate into nothing worthy of record. The true history of the world war is in the triumph of right, and the true historian tests the whole panorama of human exertions on the touchstone of Principle, underscoring a man's efforts to extricate himself from mortality as the fact and all else the fable. But Mrs. Eddy

shows to the prepared understanding that the absolute history of man is an unbroken record of right activity and spiritual oneness with God.

The life of Mary Baker Eddy is not an isolated phenomenon. It is connected indissolubly with the lives of the great religious leaders of all time. Tennyson perceived the continuity of divine inspiration when he stated, "Yet I doubt not through the ages one increasing purpose runs." This purpose, as Mrs. Eddy makes clear, is the final and complete unfoldment of God and His relation to man, wherein sin, disease, and death have no place. The life of Mrs. Eddy synchronizes perfectly with this divine purpose, as does the life of every good man and woman, and every good motive and act, since the dawn of Truth to humanity. The Christian Scientist in the remotest corner of the world is forwarding this purpose in so far as he is demonstrating the truth; but the true life of Mrs. Eddy, and the true life of man, is in God.

Expressions of gratitude for the life of Mrs. Eddy feature the testimonies in the Wednesday evening services and in her periodicals. The world outside of Christian Science is increasingly paying her tribute. Nevertheless, the debt cannot be paid by lip service nor by splendid memorials. If unity is lacking among Christian Sciencists, if their practical demonstration of Christian Science falls short of her reasonable expectation, they might erect statues to her in every public square in the world, and still would not be honoring her. Gratitude to Mrs. Eddy can only be expressed in healing sickness and sin, in proving the brother-hood of man. She will have a place in history only as the fruits of her revelation are manifestly good.

The observance of the centenary of Mary Baker Eddy by Christian Scientists should be a reconsecration to humility and to practice rather than profession. It should find her students everywhere diligently studying her writings for the true history of themselves and of the race. It should be marked by a desire to preserve the undivided garment of her revelation, in its visible forms no less than in its letter, to the end that all that she established will be saved and be made more and more helpful to the cause and to the world. As she says on page 93 of "Miscellaneous Writings," "Beloved students, so teach that posterity shall call you blessed, and the heart of history shall be made glad!"

[Written for the Sentinel]

The Goal

E. H. HUGHES D'AETH

"In humility they climb the heights of holiness."-Science and Health, p. 514

HIGH is the mountain peak that I would gain;
At times methinks I see its radiance bright
Shining above the clouds of sin and pain,
And then the mist grows thick and hides the light.
The path I climb is narrow, rough, and steep,
And hedged with thorns that catch me and delay,
And make me think 't were better I should sleep,
Regaining strength to climb another day.
But as I falter breezes stir the mist,
And thro' a rift I see the peak stand clear,
And I go struggling on, for well I wist
That would I reach it I must banish fear.
No effort seems to me too hard to make
To reach that wondrous pinnacle of peace,
So pressing on, each step I humbly take,
Each gain'd, my love and gratitude increase.

Individuality

THERE is probably nothing against which the ordinary man fights more determinedly than any effort to rob him of what he terms his individuality. The reason for this is a much deeper one than he is conscious of. It lies in the fact that individuality is spiritual and indestructible, instead of being a merely material condition at the mercy of those forces which claim power to destroy the human being. As a consequence of the fact that it is impossible to hide the truth about anything, every person is conscious of an individuality which it is entirely beyond him to explain, and of which all the world's philosophies have never been able to offer an explanation. What the true explanation is Christ Jesus made perfectly clear, when, again and again, he drew the distinction between the real man and his material counterfeit. As, for instance, when he told Nicodemus that that which was born of the flesh was flesh, and that that which was born of the Spirit was spirit, or when he explained to the Pharisees that they were of their father the devil, evil, and that this evil had no place in the truth of spiritual reality.

Jesus, of course, went further than this in his explanations. He may, indeed, be said to have been always covering this particular ground in his teaching. Just as he explained to the Pharisees that the human being was of his father the devil, so he repeatedly explained to those with ears to hear that their Father was in heaven, that their Father was Spirit and not matter, and that it was consequently the duty of every one who was endeavoring to be his disciple to strive to be perfect even as his Father which was in heaven was perfect. What Jesus meant in this teaching, Mrs. Eddy has made clear to humanity in her teaching of Christian Science. A human being, she has explained, is the counterfeit of his spiritual reality, and consequently when this is learned a man comprehends how the loss of his materiality, so far from causing the destruction of his individuality, merely demonstrates the eternity of that individuality. "Spirit," she writes, on page 513 of Science and Health, "diversifies, classifies, and individualizes all thoughts, which are as eternal as the Mind conceiving them; but the intelligence, existence, and continuity of all individuality remain in God, who is the divinely creative Principle thereof."

So far, then, from any person imagining that he can lose his individuality by losing his materiality, the exact reverse is the truth, as Jesus explained when he declared that he who would lose his life, that is his soul or materiality, "for my sake and the gospel's, the same shall save it." It is, therefore, a spiritual instinct, whether the individual is conscious of it or not, which causes him to fight for his individuality, and to struggle against every effort to suppress this individuality. The curious thing is that people do not perceive that it is the effort of autocracy, in some shape, to impress itself on the world, which constitutes the attempt to rob them of their individuality, and not the effort of Truth in exposing the unreality of matter, and so acquainting them

with their spiritual reality. Thus it is the true instinct to resist mental domination of every sort which has incited the effort of the individual to preserve his individuality, and has made him struggle, no matter at what seeming cost to himself, for that freedom of thought which is necessary to his spiritual advancement. It is always the materialist who submits.

This is the underlying cause of all religious persecution and the resistance of it. The persecutor is conscious of the opposition to his own domination in the existence of the individuality of his neighbor. He does not know that what he is setting out to fight is the spiritual reality of his neighbor's being. He imagines that it is just a material personality which can be suppressed. This is because he takes the counterfeit for the reality, and does not recognize that he is really running up against the reality in his effort. Probably never has this been more clearly illustrated than in the struggle of Wycliffe with his ecclesiastical superiors. To the ecclesiastics of the fifteenth century, Wycliffe was a great schoolman to be feared on account of his intense intellectuality. They knew that this intellectuality towered above their own, and they were afraid of its influence over their neighbors. What they failed to understand was that if this mental superiority, this individuality, had been nothing but sheer material intellectuality, it could not have stood up against their efforts for a moment. The fate of Abelard ought to have been sufficiently fresh to their memories to have assured them of this. It was because they did not understand that this intellectuality was supported by an understanding of Principle far in advance of their own, that they engaged in a futile conflict with it which ended in the first translation of the Bible into English, and the publication of those terrible diatribes against their own materiality and autocracy, diatribes from the very force and truth of which neither they nor their successors were ever able to escape. The fact was that the individuality of Wycliffe was roused to resistance by the effort of ecclesiasticism to fetter his intellect. His opponents believed that intellect to be nothing but material, because they were materialists themselves, and had no perception of the spiritual facts of being. As a matter of fact, the intellectuality of Wycliffe was founded on his understanding of Principle, whereas the intellectuality of Abelard was purely material. The individuality of Abelard the church was able to crush because of his intellectual materiality. The individuality of Wycliffe survived every attack upon it, because his intellectuality was based not on human reason but on spiritual understanding. His opponents made the very mistake which, Mrs. Eddy points out on page 171 of Science and Health, material man always makes: "He believes that Spirit is sifted through matter, carried on a nerve, exposed to ejection by the operation of matter. The intellectual, the moral, the spiritual,-yea, the image of infinite Mind,-subject to non-intelligence!"

The simple truth of the whole matter is that there is one infinite individuality, God, Principle, as Mrs. Eddy explains on page 281 of Science and Health: "The one Ego, the one Mind or Spirit called God, is infinite individuality, which supplies all form and comeliness and which reflects reality and divinity in individual spiritual man and things." This individuality is reflected in generic man, the divine idea, the image and likeness of God, Principle. But generic man necessarily contains all ideas ranging from the infinitesimal to infinity. The lesser ideas, however, though composing the infinite idea, never for a moment lose their individuality. "The minutiæ of lesser individualities," Mrs. Eddy says, on page 303 of Science and Health, "reflect the one divine in-

dividuality and are comprehended in and formed by Spirit, not by material sensation."

Eventually, therefore, a man's effort to maintain his own individuality terminates in a struggle against his own materiality. It is to the fears inherent in this materiality that autocracy, political, civil, or religious, appeals in its attempt to enthrone its own individuality. In the face, however, of an understanding of the fact that true individuality is infinite and is eternal, the forces of autocracy face their defeat in the effort to kick against the pricks.

FREDERICK DIXON.

Choice of Treatment

To the student of Christian Science who has proved for himself that reliance on the understanding of divine Principle is more effective than recourse to material methods of treatment, the failure to depend entirely on this understanding for his children as well as for himself would be neglect. It could not be neglect, however, for such a one to choose Christian Science in preference to the varying methods of medical practice. In other words, the concepts of neglect that have been formulated by those who are interested in serotherapy must be revised when even a little of Principle and its operation is discerned. Doctors and nurses themselves, as well as public officials, can be convinced that the methods of Christian Science require the utmost of intelligent care of children as for any one else. Christian Science treatment does not consist in doing nothing. It is the exact application of reasoning in accord with infinite Principle to whatever seems to be wrong. It is the knowing of specific truth in place of what seems to be specific trouble. That this knowing is effective has been demonstrated in the cases of multitudes of children for whom regular medical doctors have declared that they could do nothing.

Mrs. Eddy had the utmost respect for the motives and endeavors of the best type of workers in the medical profession. In the Manual of The Mother Church she provided under the heading "Uncharitable Publications" (Art. VIII, Sect. 26): "A member of this Church shall not publish, nor cause to be published, an article that is uncharitable or impertinent towards religion, medicine, the courts, or the laws of our land." The Christian Scientist agrees with every right motive, but insists on his own freedom to fulfill his right motive in insuring his health and that of his children, through consistent reliance on the divine Mind alone as sufficient to heal any disease or other discord. "It will be found," Mrs. Eddy says in "The First Church of Christ, Scientist, and Miscellany" (p. 4), "that, instead of opposing, such an individual subserves the interests of both medical faculty and Christianity, and they thrive together, learning that Mindpower is good will towards men." It is indeed to the interest of the medical profession that men, women, and children shall be healed through the practice of Christian Science. The efficacy of the spiritual treatment that expresses divine intelligence takes nothing from the doctors but should encourage them to investigate and get the benefit of spiritual Principle and its activity.

The child usually responds to Christian Science treatment even more readily than the adult. The smallest child can be shown simply how to reason in accord with divine Principle and how to apply this reasoning definitely to whatever seems to be wrong. To any one who has sincerely studied this spiritual practice, it is clear that work in Christian Science constitutes "doing something" much more than any giving of medicine or antitoxins. In medical practice, a

patient is generally left to his own fears most of the time, since it is possible to apply material remedies only at intervals. In Christian Science treatment, however, the patient, whether child or adult, is encouraged to study and reason rightly for himself quietly but completely. This does not mean that the one depending on Christian Science is expected to think continually in the terminology of "Science and Health with Key to the Scriptures" or Mrs. Eddy's other writings. It does mean, though, that from the first turning to divine Principle, the seeker for help learns something of how to rejoice in the experience of Principle through all the minutiæ of living. Even the child who is being cared for through the understanding of infinite Mind as the only controlling or influencing power is lovingly encouraged to know the truth with gladness.

Knowing the truth, as the term is used in Christian Science, means knowing that divine intelligence governs the real man and maintains indestructible harmony in spite of any seeming. The realization of this takes the place of supposed overaction or inaction. Thus healing goes on. Now, of course, the application of this fundamental truth does not depend on the use of just these words or any other set phrases. The same truth can be stated and understood in all sorts of terms. The small child, for instance, may be encouraged to know that divine Love, which is but another name for the one all-wise Principle, keeps its child, or expression, well and happy. How divine Love shows itself as everyday good can then be thought out in endless ways. This understanding readjusts action with true naturalness. Such work as this involves no neglect but overcomes fear and proves the establishment of harmony, as no amount of medication could ever do. Students of Christian Science are demonstrating that they can be exact in their application of Principle, intelligent and orderly in their practice, and yet obedient to Mrs. Eddy's advice on page 354 of "Miscellaneous Writings": "A little more grace, a motive made pure, a few truths tenderly told, a heart softened, a character subdued, a life consecrated, would restore the right action of the mental mechanism, and make manifest the movement of body and soul in accord with God."

That this practice of Principle should be freed from unjust interference of every sort is becoming more generally recognized in every community. Thus Mr. Henry James, commenting on the courageous stand of his father, Professor William James, in 1898, before the Massachusetts Legislature, says: "What happened cannot be understood without recalling that thirty-odd years ago the licensing of medical practitioners was just being inaugurated in the United States. To-day it is evident that every one must be qualified and licensed before he can be permitted to write prescriptions, to sign statements upon which public records, inquests, and health statistics are to be based, and to go about the community calling himself a doctor. On the other hand, experience has proved that those people who do not pretend to be physicians, who do not use drugs or the knife, and who attempt to heal only by mental or spiritual influence, cannot be regulated by the clumsy machinery of the criminal law." This is a fact which deserves the wise consideration of every person who mistakenly attempts to harass students of Christian Science. No form of material treatment has ever been proved indispensable and infallible. Christian Science is winning its way by actual demonstration. Sooner or later, therefore, the would-be persecutors themselves will be glad to understand the efficacy of absolute spiritual Principle for men, women, and children alike.

GUSTAVUS S. PAINE.

Testimonies of Healing

It is with deep reverence and gratitude to God and to the kind friends who brought Christian Science to me, and with the earnest hope that my experience will help some one else who may be suffering as I was, that I send this testimony of the healing power of Christ through Christian Science. I had been under the doctor's care for some time, and had been for over a year on pretty nearly a starvation diet. I suffered such intense pain that at times my husband and I both thought I would lose my reason. In January, 1917, I was to mortal sense at death's door. One doctor pronounced it liver trouble and another one gallstones, and said that I could not be cured without an operation. In fact, he said two operations were necessary and that I could not live in the condition I was in; so we decided it was the only thing to do. We wrote to my husband's brother and told him I was going into the hospital for an operation on the following Tuesday morning, and for him to wire if he was coming over or had anything to say. He was the only relative we had in this part of the country. About 8 p.m. on Monday I had a most wonderful experience. I called my husband and said: "Something is being done for me. 'I don't know how or what, but I believe I am going to get well again." He has since told me how frightened he was. thinking it to be the end. The pain immediately commenced to lessen and at 9 p.m. we had a wire from my brother-in-law telling us to postpone the operation, that he was sure I would be all right. Owing to the urgency of the need and the lack of time for communication he had taken my case immediately to a Christian Science practitioner. I went to bed that night and slept like a baby, a thing I had not done for years. Let me say here that up to this time I had not had any use for Christian Science. I got up the next morning and ate a hearty breakfast. Of course I thought the pain would come back again and said to my husband, "I don't believe in Christian Science but I will give up every prejudice I have and not fight against it, and see if there is anything in it." I also said: "I am going to eat whatever I want. If I can be cured of one thing I can be cured of everything."

I had been taking seven different kinds of medicine, all of which I put aside, and am grateful to say I have never had any need for any of them from that day to this, and have had no return of the old trouble. My husband, I think, took up Christian Science even more readily than I did, and we have been studying it ever since, and have had many demonstrations of its healing power during the past two years. Let me say again that words can never express our gratitude to God for the little we know of Christian Science, and we are both daily striving to live the life which reflects love to our fellow man, and hope to be the means of helping other sufferers to find the light, health, and harmony which we have received.—Mrs. Peter Campbell, Victoria, B. C., Canada.

I have been a student of Christian Science for about ten years, and I wish to express gratitude for the many, many blessings which have come to me and my household during this time. Some of the physical diseases healed were of long standing, others were called incurable, and still others were due to a belief in heredity. These included tubercular conditions, enlarged throat glands, pneumonia, and smallpox; other minor ones have become so dim in memory that I scarcely recall them. Most of these conditions were overcome in one treatment; in fact, I do not recall having more than one treatment for any of the above-mentioned healings. Some were met without a practitioner's aid. It was much

more difficult for me to learn to know God as the source of supply. This took constant and earnest work, but I am very thankful it did. After losing what were then possessions to me, I was forced to turn to God; it was His opportunity. Through this testing time, I learned that God answers all prayers, if we pray aright. That for which I am most grateful is the constant unfoldment of good, which is coming to me and mine each hour of the day. These blessings come in the home, in business,—wherever we are we can claim this direction, guidance, and protection of the one Mind. It is our rightful inheritance.

A recent demonstration is cause for great gratitude, because it has shown me that I am learning to ignore sense testimony. When feeding the canary one morning I noticed the cage did not hang securely, but I did not fix it. Later in the day the cage fell, pinning the bird beneath it with a wire across its neck. I declared the truth before I reached the cage, but when I picked up the bird it was gasping and limp. I continued to work as we are taught in Christian Science, and before long the little head raised; soon the bird was in the cage, and the next day was singing merrily as usual. A few days before this I had asked myself would I be able to stand calmly in meeting a belief of death. I did not acknowledge the belief in connection with the bird. God as Life, and idea as expressing Life, was all that came to me. That I am learning to know God is cause for greater gratitude than I can find words to express. Works only can testify to the gratitude felt.—(Mrs.) Frances D. Webb, San Francisco, California.

It is with a heart full of gratitude that I am writing to tell what Christian Science has done for me. I was a complete physical wreck, suffering from heart and kidney trouble, also from severe and almost incessant headache. For two and one-half years I was either in bed or on my couch most of the time, not able even to do a bit of sewing, and some days not able to see any one, as the exertion of talking was too much, and resulted in heart attacks. I was never left alone day or night, as my husband was told that the end might be expected any time. I saw seven different doctors, who all told my friends that my recovery was impossible, but the quieter I kept the longer I should be spared to my husband and children. I was carried upstairs, and was wheeled out in a chair for fresh air when the weather was suitable, but often the excitement was too much and my husband was afraid I would pass away before he could get me home.

A year ago last October my sister-in-law brought me a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and asked if I would like to read it. She knew nothing about Christian Science herself but knew of two different cases that had been healed through it. I told her I thought it was just what I wanted. A neighbor had asked me two years before if I had heard of it, and gave me some copies of the Sentinel to read, but at that time I became worse, and by the time I was able to read I found the Sentincls had been sent back, so I did not see anything of them. But I always felt I should like to have read them, and wished that my neighbor would offer them again. I promised my sister-in-law I would study Science and Health, for I saw it was a book to be studied thoughtfully and prayerfully. After three days' study I began to get better, and in less than a fortnight I asked my husband to take me to a lecture on Christian Science. He was very much afraid and thought he would never bring me home alive, but I knew I was better, so he took me in a wheel chair. I enjoyed the lecture and was none the worse, and

in five weeks I could walk to church, which is three-quarters of an hour's walk each way, and do all my own work without any ill effects. I can walk upstairs or uphill and do any work a woman is required to do quite easily, and feel better than I can ever remember feeling before. For all this I am most deeply thankful, and through the little knowledge I have gained, and by declaring the truth, I have since then been cured of piles and constipation. I pray daily that I may grow in knowledge, wisdom, and understanding of God, and of man as His image and likeness. I trust this will help some dear sufferer to seek and find the truth which makes free from the bondage of sin, sickness, and death.

(Mrs.) E. Biggs, Redfield, Bristol, England.

4

With a deep sense of thankfulness to God I wish to relate some of the blessings which I have received through Christian Science. For years I had suffered severely from nervous trouble, which was later accompanied by heart trouble, bowel complaint, shortness of breath, and insomnia. I had had medical treatment of various kinds and was treated by specialists and nerve doctors, but in vain.

Through a dear relative I found the way to Christian Science. I requested help from a practitioner, which was lovingly given, and I studied the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, attended the Sunday services and Wednesday evening meetings, and after a compafatively short time was freed from the abovementioned troubles. I thank God heartily for this, and am grateful to those who helped me to find the truth.

(Mrs.) HEDWIG GIFFHORN, Hannover, Germany.

4

I would like to tell some of the benefits I have received through the study of "Science and Health with Key to the Scriptures" by Mary Baker Eddy. Through reading this wonderful book I have been healed of the liquor and tobacco habits, also of the use of profane language. I am grateful for the better understanding I have of the Scriptures, for the Christian Science literature, and for all the writings of Mrs. Eddy. I am grateful for membership in The Mother Church, also that I am privileged to meet each Sunday with a group of Christian Scientists here to study the Lesson-Sermons, thereby receiving help along the way in seeking the kingdom of God and His righteousness.

LYNWOOD PULLEN, Freehold, New Jersey.

4

I had suffered for four years from broken arches and had resorted to corrective shoes and arch supports, but to no avail. I tried Christian Science but did not seem to get relief. Every night found me suffering and discouraged with the fact that many duties must be left undone because I could neither stand nor walk for any length of time without pain. One Wednesday night, more tired than usual, I sat down in a sheltered corner in a back seat at church and thought, "Here is peace, here in this beautiful room and in this comfortable seat." But I cried, "Peace, peace; when there is no peace," and immediately the challenge to the materiality of my thought came in the announcement of the opening hymn. Quickly the suggestion came, "I cannot stand on these aching feet." But, ashamed, I immediately arose. The first and only words of the hymn that I heard were these, "Held in Thy law, I stand" (Hymnal, No. 176). The healing came instantly, as I realized that my ability to stand did not depend upon bones, ligaments, or muscles, for as a child of God I was upheld,

supported by His law, which is always operative. I rejoice in being able to perform my duties in comfort, and to resume the former pleasure of walking, but the abiding joy deep in my consciousness is that Truth does make free from every argument of error which may present itself.

Another lesser healing, if there be degrees in the matter of healings, came in the freedom from any temptation to talk during the collection of offerings. The music seems so beautifully expressive of the spiritual meaning of the offering, which at present finds expression in money, and provides the proper atmosphere for a silent prayer of gratitude for the Lesson-Sermon, that any word to another even of appreciation seems not only unnecessary but almost profane. For me there is a new import in Mrs. Eddy's words in "Science and Health with Key to the Scriptures" (p. 234), "Whatever inspires with wisdom, Truth, or Love—be it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table, feeding the hungry and giving living waters to the thirsty."

(Mrs.) VIOLET HART HALL, Grand Rapids, Michigan.

4

Isaiah, in the twenty-sixth chapter and third verse, says, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." A short time ago this promise was proved to me most beautifully. For ten days I was in a house which the doctors said was filled with diphtheria; the greater part of the first sixteen hours I spent with one who had this disease in a very severe form, and the remainder of the time with one who the doctor said was a carrier of the disease. Only once during this time was there any fear of contagion, and this was quickly overcome, as was a belief I had long had of being very much irritated by the fumes of formaldehyde. This was used in both liquid and dry form, and seemed at first to cause a soreness in my nose and throat, but with a practitioner's help this was quickly overcome. Not only was I protected from fear, but instead of a sense of loneliness and isolation there was gratitude and joy that no matter what the seeming material conditions were I had only to turn resolutely from them to the one Mind to find peace and harmony.

I have had many other proofs of the healing power of Christian Science. Before I began the study of this Science I had been unable for several years to attend school or to do any work that kept me indoors. For the last three and one-half years I have been able to carry heavy school work and also do outside work at the same time. Colds, sprains, burns, discontent, homesickness, lack of supply, and many other discordant conditions have been destroyed by practicing what I have understood of this truth as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures" and her other writings. I am very grateful for these healings and for an understanding of God as the Principle which enables us to solve every problem that comes to us.

(Miss) Ida Jennings, San Jose, California.

It is my duty as well as my privilege and desire to give my testimony to what Christian Science has done for us. From childhood I had been troubled with my eyes. The balls would often become swollen, inflamed, and very painful, and I could not bear the light. I visited nine doctors whose opinions differed as to my case. This seemed to be only guesswork. I got no encouragement from any of them. I was told not to stoop, not even to pick up a pin, as it might result in injury to my eyes, and not to lift any

weight, as I was liable to become suddenly blind by lifting. I had not much more than entered womanhood when these so-called laws were laid upon me. I could not understand how any one could journey through life and obey them, and so gave them no heed. I have stooped, and have lifted all that has been necessary without any such results.

I often asked God to show us how to get along without calling on doctors. One evening when my two youngest children and I were in the garden, a friend, who was once a neighbor of ours, stopped to talk to me for a few minutes, and handed me a copy of the Sentinel before she went on her way. I could not then do my own reading and now, although the healing of my eyes is not complete, through Christian Science I am able to read through a double glass. I took the Sentinel to my husband, and sat down to hear him read. The more he read the more I knew God had answered my prayer. I said, "That is just what I have been looking for," and the next Wednesday I went to visit this friend to see what more I could learn about this truth. We drove a distance of thirteen miles to the town where she lived and I told her I was interested in this teaching and that I wanted to learn more about it. She told us that they had a church in town and that we could visit the reading room, which we did. The lady in charge directed us to the office of a practitioner whom we found to be very loving and kind. I had been troubled with a pain in my left elbow for nine months. While the practitioner was talking to me this pain disappeared and has never returned. This was seven and a half years ago. We borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Scientist gave us a few copies of the Sentinel and a copy of the Journal, which started us on the right road.

Since coming to Colorado, we have called several times on a Christian Science practitioner for help, which has always been lovingly given. We are a family of five and have all been benefited by Science. Last year the boys were healed of influenza through absent treatment and later my daughter was healed of erysipelas, also through absent treatment, as was my husband of the tobacco habit. For these healings we are most grateful, and can never praise God enough for His mercies and wonderful works toward the children of men.

May all the people of the world have reason to praise God that this age was blessed with such a noble woman as Mrs. Eddy, who spent her life for the benefit of all mankind.

(Mrs.) CATHERINE CRACRAFT, Eckley, Colorado.

Christian Science healed me of the tobacco habit in a very short time, through absent treatment, as my wife has stated. I had tried several times to overcome this habit before knowing of Christian Science, but failed each time. I am now entirely free and am thankful for my freedom.

John Cracraft.

I did not come to Christian Science for physical healing for myself but for my husband, who was seeking help. For many years he suffered from nervous indigestion, for which the physicians could give him no relief. For two years he was unable to attend to business. In 1914 Christian Science was presented to us and since that time, with few exceptions, he has been able to attend to business regularly. This healing was very slow, but constipation was overcome in the first treatment and many other conditions have been met.

I have been healed of a severe case of hemorrhoids. I feared I would have to have an operation. Through reading the textbook, "Science and Health with Key to the Scrip-

tures" by Mrs. Eddy, the fear of an operation was overcome, and I was relieved to a great extent; the condition presented itself, at intervals, however, for three years. I did not ask for help, but in speaking with a dear friend I was told that God's work is complete. When that realization came to me I was healed. I have also been healed of colds, fear of infection, and mumps. My son has been healed of constipation, colds, chicken pox, eye trouble, and a severe case of influenza.

For many years before coming into Christian Science I was a constant reader of the Bible, which I dearly loved but never understood. Through reading the textbook the beautiful promises in the Bible are constantly unfolding to me, and my love for God and man is ever increasing. For the physical healings and the happiness it has brought to our home I am most grateful. I am also most thankful to God, to Christ Jesus the Way-shower, who proved God's love for man, also to our beloved Leader, Mary Baker Eddy, who taught us that God's love for man is the same now as it was in Jesus' time, and to the practitioner who has been so loving and patient in showing me the way to work out my own problems. My desire is to prove my gratitude by giving loving service to our glorious cause.

(Mrs.) Martha French, Atlantic City, New Jersey.

4

I am thankful to God and to Christian Science for my life. For almost two years I was laboring with a disease which physicians and specialists pronounced incurable, degenerating from a man of ordinary intelligence to the image of a beast, laboring under all kinds of illusions, threatening self-destruction, and also threatening others. I was sent away and while confined in an institution I learned the truth, the ever presence of the divine Mind, and the truth has made me free. When the healing came to me it was practically instantaneous, and all of my lost faculties returned. This occurred ten years ago. To give one some idea as to my condition when I came to the light, my weight at that time was 103 pounds, my present weight is 190 pounds.

EDWARD PAUL ZEIDLER, Cleveland, Ohio.

4

It is with gratitude to God that I testify to what Christian Science has done for me. In 1911 I was thrown out of a buggy and the neck of the femur of the right hip was pushed up into the socket and broken off. The doctors said they had set it; then I lay for six weeks with a seven-pound weight tied to my foot, and could not sleep day or night. I was later taken to a sanitarium and placed under the care of another doctor, who said I would have to have an operation, and that he could cut that bone out, but I would have to go on crutches. I refused to consent to it. After being there a little more than three weeks I went to a health resort, where I remained for two weeks, but did not get any better. I went about on crutches and when I would fall down I could not get up without help. I then took osteopathic treatments, but without avail. For two years and a half I could not sleep except for ten or fifteen minutes at a time, and I could not turn myself in bed.

At this time a friend asked me why I did not try Christian Science. I consented and a practitioner gave me six treatments, after which I felt that I could help myself, and I did. I have been healed of rheumatism, stomach trouble, sick headache, insomnia, nervous prostration, and also of consumption, although the doctor said that one lung was gone and the other was half gone. I thank God I am a well woman

branch church.

British Columbia.

titioner who, I had heard, had an office there. Upon reach-

ing her office I felt so ill I could scarcely stand, and she

told me to lie on her couch as long as I cared to. She

sat silently by me, and in a short time I began to feel better

and soon felt strong enough to go out on the street and

do some shopping. I stood the long ride home without

tiring, and after sleeping soundly awoke with the con-

sciousness that I was free. About a year later I had an-

other attack which was as quickly met, and never since

has it reappeared. Chills, to which I had been in bondage,

also disappeared as I gained more understanding of the

truth. In my family of seven there have been numerous

healings, including the overcoming of croup, influenza, and

measles, for which I am grateful to divine Love, to Christ

Jesus, and to Mrs. Eddy, who revealed to us the Principle

of the Master's mighty works. The greatest blessing Science

has brought to me is freedom from fear and worry, and

the ability to see in some degree the perfect man. I am

especially grateful for membership in The Mother Church,

as I have never had the privilege of membership in a

is the master of error was in the overcoming of a manifes-

tation of disease which ran its course and seemed about to

clinch its argument, when it was suddenly destroyed, leaving

no trace and requiring no period of convalescence. The

thought that upheld me through this was Mrs. Eddy's state-

ment in Miscellany (p. 149), "Remember, thou canst be

brought into no condition, be it ever so severe, where Love has

not been before thee and where its tender lesson is not await-

ing thee. Therefore despair not nor murmur, for that which

seeketh to save, to heal, and to deliver, will guide thee, if

thou seekest this guidance." I feel the deepest gratitude

to the practitioners who have so faithfully and lovingly

helped me at various times, and for the literature, which

I get so much help through reading the testimonies in

the Sentinel and Journal that I feel it is a privilege and

duty to tell others how very grateful we feel for this won-

derful truth. Although a young student of Christian Science,

I have had many beautiful proofs of God's power. With the loving help of a practitioner I was healed of a nervous breakdown and bowel complaint. My two children have

been helped so many times in overcoming discordant con-

ditions that I feel I can never be grateful enough, but what

I can do is to try to live Christian Science. I am indeed

grateful to God, also to Mrs. Eddy for showing us the way.

Truth, and to give again to the world that demonstrable

knowledge of God which healed all manner of diseases two

thousand years ago, as recorded of the works of Christ Jesus

Since I began the study of the Bible together with Science

and Health, nearly six years ago, there has been no medicine

used for any ills in my family, except when civil law com-

pelled vaccination of two boys, believed to be a preventive of

smallpox. We all told the doctor the vaccination would not

take, and he applied the treatment the more thoroughly, as-

serting that it would take, but it did not, and the scratches

healed up readily. One boy had a leg mashed by a log rolling

against it, blood poisoning set in and a piece of bone came

out. We had absent treatment from a Christian Science

practitioner and the boy was healed. Toothache, sore throat,

and many minor ills have been healed; some instantly.

Financial mountains have been leveled through help from a

Christian Science practitioner. Once three notes, held by a

banking institution, which had the privilege by contract to

take possession of personal property to secure their money,

in my family I am grateful to God, and also to Mrs. Eddy for her untiring efforts to bless mankind.

Christian Science first came to my notice twelve years ago when I heard of the healing of a lady who had been

sound and well. A few months later I met a friend whom I had not seen for several years and was greatly surprised

Signs of the Times

["A Torquemada in Miniature"—The Christian Science Monitor, Boston, U.S.A., Dec. 15, 1920]

The love of persecution is an innate feeling of the human mind. Historically it is written, in letters of fire, across the pages of the world's story from Adam to to-day. Philosophically, its reason is to be sought in the little word "fear." If a baby were to shake a fat fist at Mr. Smith in Broadway, Mr. Smith would smile and pass by. But if a roustabout were to do the same thing, Mr. Smith would probably seek the police station and protection. The Smith family, however, is a large one: it has many facets to its character. If the family representative happens to be a clergyman, and finds that Mr. Jones is preaching a doctrine which is considered unorthodox, he gets into his pulpit and gives Mr. Jones as bad a quarter of an hour as any to which Cotton Mather or Jonathan Edwards ever subjected the sinners of Boston or Northampton. If, again, the Mr. Smith should have joined the medical profession, and should have heard that Mr. Robinson was practicing in an irregular manner, he would no doubt write to the local representative of the medical association, and implore him to take steps to prevent people from being treated by any method save the extremely unsatisfactory one adopted by himself.

Now, if anybody should ask why this Smith trinity should act in such a way as this, the answer is a very simple one: it is, as has been said, in each case, fear. Mr. Smith in Broadway is quite conscious that his muscles are by no means equal to those of a roustabout, but he is equally conscious that he is in no danger from the baby. His purview, for this reason, becomes axiomatic of that of the family. If the Reverend Mr. Smith were certain that the seats in Mr. Jones' church would be empty on Sunday, and those of his own full, he would never trouble to preach against him, and denounce his heresies in the papers. If Smith, M.D., were assured that Mr. Robinson's office would be empty during the week, he would not waste his time writing to the local representative of the medical association. But, as Wordsworth writes, "Fear hath a hundred eyes." It sees dangers all day long where none exist, just because, believing in itself, it cannot trust in Love. That is what the apostle James endeavored to get a fearful world to understand in the first century, and that was why autocracy, the most frightened thing in the world, in the person of Herod, murdered him. That is why orthodoxy, in all the ages, has compiled its indexes, and burned heretical writings, under the delusion that in destroying paper it was obliterating thought. And that is why Thomas Lee Woolwine, district attorney for Los Angeles County, California, is found writing to Dr. Rea Smith, president of the Los Angeles County Medical Society, in an endeavor to stir him up into joining in preaching a crusade, in the twentieth century, against Christian Science.

When Dr. Rea Smith received Mr. Woolwine's letter, he must have sat up and wondered. For the modern Peter the Hermit was once in need of conversion himself. It was some three years ago, when a suit was brought against the State of California, by a practitioner of one of the independent schools of medicine, on the ground of discrimination in the law in favor of Christian Scientists, seeing that no examination was required in licensing a Christian Science practitioner. This discrimination he held was unconstitutional. The clause in the act to which exception was taken is as follows: "Nor shall this act be construed to regulate, prohibit, or apply to any kind of treatment by prayer, nor

to interfere in any way with the practice of religion." Its defense was undertaken by the Attorney-General for the State, and his assistant in making this defense was Thomas Lee Woolwine, then as now district attorney for Los Angeles County. Therefore, if Dr. Rea Smith is gifted with any of Gratiano's sense of humor, he must have murmured to himself, after reading Mr. Woolwine's letter, "A Daniel, still say I, a second Daniel!"

What is it that has come over the spirit of Mr. Woolwine's dream, and converted him from a defender of the statute into an opponent of it? What is it that has led him to propose to annul the law he only three years ago fought to maintain? On his own showing, it is the cry of the little children. That phase of his letter shall be dealt with, fully and without equivocation in due time; for the moment the point has to be raised, why what was legal three years ago, and has never been repealed, is illegal to-day? A disrespect for the law, a tendency to boastfully repudiate the law and threaten to break it, is a trait of the mentality of the Bolshevik and the bootlegger, and other misguided people, but it is so out of place in a district attorney that it is impossible to avoid the conclusion that Mr. Woolwine has changed his opinion, and has come to the conclusion that he and the Attorney-General for the State were mistaken in their previous reading of the law. To the layman the statute seems as plain as it once apparently did to the district attorney. It was intended to recognize the rights of the man who accepted the, to him, obviously plain statements of the Bible, in a country not only Christian, but possessing a Constitution based on social, political, and religious freedom. This year is witnessing the celebration of the landing of the Pilgrims at Plymouth, and Mr. Woolwine would be well advised to remember that the teaching of Christian Science can hardly seem more mistaken to him than the views of the Brownists and other separatists did to King James and to Archbishop Laud.

The worst, however, of the autocratic spirit is that it never learns, and that consequently it is always endowed with the vanity of imagining that it can achieve by persecution something the great persecutors, all down the centuries, have failed in accomplishing. They have caused misery, of course, they have stirred up hatred, they have produced strife. But the attempt to force men to accept their neighbor's point of view has never ended in anything but faction. Dissent thrives upon persecution, and the epitaph of persecution is always failure. Where Cæsar and Torquemada failed, Mr. Thomas Lee Woolwine is scarcely likely to succeed.

["The Christian Safeguard to Democracy"—by Edward Shillito, as Quoted in Public Opinion, London, England]

A democracy unguarded is never safe for humanity; it topples over on the one side to autocracy, on the other to anarchy. Against these two dangers there must be a corrective. It is therefore the province of the Christian gospel not so much to adopt democracy as its own equivalent in the ordering of society, but rather to provide the something more which alone can keep democracy stable. It must bring the salt without which it will lose its savor, and the salt is the practice of fellowship. Fellowship alone will make democracy safe for mankind.

Such fellowship as Christianity approves brings new and weighty motives and strange energies in mankind. The dangers which beset democracy arise from absence of such things—from the lethargy of mankind, which makes it fail to hold the heights it wins. It is not enough to secure for the

7

multitude the formal power over its own collective action. Men are too ready to shrink from responsibility; under the most precise forms of democratic government it is still possible for the few with energy and ambition to take control by default. The representative becomes the master, and he is not to be blamed; he has ambition, and sometimes conviction; he has been toiling while others were playing. So it comes about that from democracy tyranny often arises. Unless some new springs of action are found the process will be repeated. Men are ready for a brief, sharp struggle, but they are called to a weary campaign. Unless they receive some incentive they will flag; and the inertia of the crowd is the opportunity of the few. From democracy through demagogy to autocracy the way runs; and the history of church and state reveals its course, not once but many times.

This motive power, according to the Christian faith, is available. The staying power can be found; its springs must always be in the eternal world; but in the operation of human society it can be recognized as fellowship, or to use the beautiful phrase of the New Testament, love of the brethren, for by this is meant something more than the readiness of each man to accord a vote to his fellow; they have something more than this in common. . . . So far from thinking that he will move the more swiftly if he shakes off the others, the Christian knows that he will not move at all unless he moves with them.

(From Education, Published by The Palmer Company, Boston, Mass.)

Education is properly the calling out of latent powers or faculties inherent in the individual. . . . When we speak of educating a person we imply, first of all, that there is something in him to be called out—unfolded, expanded, trained. This being the case, we ought not to think that education is putting something into the mind. Information may be imparted in the process; but education is the discipline of the mind so that it may acquire information when needed, and use it as a master workman uses his materials. Education aims at the perfection of the instrument.

[From the Intercollegiate News Service, Intercollegiate Prohibition Association, Chicago, Illinois]

America's big task at present in regard to prohibition is to interpret it properly to the rest of the world. Preeminent in that work is to give truthfully the results of prohibition. Just what are the facts? is the continuous query that comes from the people of other lands. To give these facts the students of America have taken it upon themselves to do. Under the auspices of the Intercollegiate Prohibition Association, and at the direction of the professors of economics and sociology in the various colleges and universities, college students, early in 1921, will make a survey of their own communities and ascertain just what effect prohibition has had upon every line of industry, business, and investment and just what the result has been in regard to crime, health, recreation, scholarship, home life, and social welfare. These facts will be carefully gathered, painstakingly checked, and sworn to before a notary by either the professor in charge or the students who secure the material.

It is expected that this information will be given wide publicity, and its use in other countries will be extensive.

[Ozora S. Davis in The Congregationalist and Advance]

There is no better word than passion that we can find to describe this sense of urgency and this glow of love which marked the work of the first disciples of Jesus as they went everywhere telling the people that they were sure of good news for the individual and for the people. They had found the Christ. They had also found the springs of a new life for themselves and for their comrades in their friendship with him. He had made a new world for them and they were living in it with such peace and joy and consciousness of power as they never had known before. They were in earnest about this. They wanted every one to know it and they affirmed that it was true without any least hesitation.

This is one of the most important factors in the success of their work. They were positive and they were sure. Men and women like to hear some one speak who knows what he is talking about and backs every statement he makes by the assured results of the truth in his own experience. Men who saw the first disciples of Jesus marked the difference in their lives which their contact with their Master was making. Then they heard the words of these enthusiastic witnesses. There was no conflict between their testimony and their character.

How can we restore this sense of mission, message, and passion to our Christian experience and practice to-day? Nothing is more vital. Every disciple of Christ now is as much under obligation to make his life a mission as were the first friends of Jesus.

[From "Lies and Liars"-by Raphael Demos in The Yale Review]

The ability to lie presupposes the ability to grasp fact.

. . . The liar is apt to become the dupe of his own lies.

Thus, he may contrive through some clever ruse to produce a good but false impression on the public concerning his person. But as a man's opinion of himself depends as a rule on the esteem in which his neighbors hold him, he may come to believe his own lies as they are reflected back from the mirror of social reputation. Lies of this sort may not inappropriately be called boomerang lies. . . .

Lying is to a great extent provoked by fear, and fear is the result of oppression; consider the child's fear of its parents, the criminal's fear of the state, the slave's fear of his master. Of course, oppression weighs upon the tyrant not less heavily than upon the oppressed. Both Machiavelli's Prince and Plato's Guardians must lie because they are rulers. . . . The spread of democratic institutions and the gradual realization of the ideals of liberty and equality should prove a successful antidote to mendacity.

[From "The Mechanism of Revolution" by J. St. Loe Strachey, in The Nineteenth Century and After]

Before I leave the subject of the mechanism of revolution I want to say something of the quack remedies which have often been used to prevent revolution and which have always failed. The first and apparently the easiest of the quack remedies prescribed for the state liable to revolution is that of yielding a little to the demands of the revolutionaries, not because they are justified or good in themselves, but out of a Machiavellian desire to divide and sow dissension in the ranks of the enemy, by making a split between the extremists and the moderates. This is described as "helping the moderates to prevent themselves being swept away by the extremists." We are to do something which we know to be wrong and foolish because it will enable Mr. Grey, Mr. Brown, Mr. Navy Blue, and Mr. Light-Green to keep a restraining hand upon the forces of anarchy. The mildly-colored gentlemen just named are always apt to come by night to distract governments and to say: "Do help us a little in our hard struggle. We are really your best friends and are trying to keep things from going too far. If you will only yield a little the storm will pass over and all will be well. If you precipitate the

crisis by an unwise resistance we moderates shall be lost, and the whole movement will pass into the hands of the men of blood and fury."...

But though this cultivation of the so-called moderates is the worst and most foolish way of paying Danegeld or political blackmail that was ever invented, no wise government will ever refuse to make reforms or to bring about changes which are necessary or which it is obvious are desired by the majority of the people. We must not allow the devil "all the good tunes" or all the good reforms. In a word, a wise anti-revolutionary government must not be content with merely saying that they will bow to the will of the majority when properly expressed. They must help the majority to find true expression for its desires—but here again only when they can do so honestly and sincerely.

[Dr. Raymond Pearl of Johns Hopkins University, as Quoted in The Sunday Herald, Boston, Massachusetts]

There is much in public health work that is worthy of the highest praise. When based upon a sound foundation of ascertained fact, it may, and does, proceed with a step as firm and inexorable as that of fate itself to the wiping out of preventable mortality. Some of the work, one regrets to say, has no such foundation, but is built upon the exceedingly shifty sands of ignorance. Having jumped without the slightest real evidence to an unsupported conclusion, the public health propagandist puts into active practice, and at great public expense, measures which totally lack any scientific validity. We shall save a good deal of money and human energy if we first take the trouble to prove that what we are undertaking to do is in any degree likely to achieve any useful end.

[From The Michigan Alumnus]

During the year 1917, when young America entered the war, the thirty universities included in the tables, lost 17.7 per cent of their enrollment. A comparison between the 1914 and 1919 registrations shows how quick was the recovery, for the gain at the end of the five-year period was forty-seven per cent. The writer of the article from which these figures are taken observes: "It seems likely that the impression young men in the service obtained as to the value of college training has been spread and has given a marked impetus to college attendance."

[Bruce Barton, in The American Magazine]

Indeed, there seems to me no better criterion of greatness than this—the capacity to differentiate between the essential and the nonessential. And of this truth, as of all others, Jesus of Nazareth was the supreme example. Traveling along one evening with his disciples, he was overtaken by darkness, and sent two of them ahead to the next town to inquire for accommodations. They hurried back in a little while flushed and indignant. The town had refused to admit them and him. Its people had heard of his revolutionary teachings, and considered that this was as good a time as any to go to the mat in the matter. Vexed and smarting under the insult his disciples urged him to call down fire from heaven on the inhospitable village, and destroy it. But he did nothing of the kind. He knew that the village had already punished itself. No sick would be healed within its borders; no blind would receive their sight; no poor would have the gospel preached to them. It had lost the greatest chance that would ever come its way; it had paid the terrible price of eternal oblivion, because of its eagerness to go to the mat.

He could, when the occasion demanded it, utter words

that burned like hot coals. No denunciation in all literature is more scathing than the speeches with which he lashed the Pharisees. But denunciation occupies very little of the record of his ministry. Most of his days were happy days: people found him wonderfully easy to love. And even Pilate, consenting to his crucifixion, could not withhold his admiration. His convictions were tempered with tolerance and softened by an interest in humanity so broad . . . that it found even the publicans and sinners good company. The early Christians inherited the letter of his teachings with all too little of his transcendent sympathy and friendliness. Every day was a judgment day with them. Their look was a challenge; their very carriage a defiance.

Wonderful people, those first saints; heroes they were, who willingly faced death rather than abate one iota of their convictions. Yet one who reads their record does not find it impossible to understand why the Romans fed them so enthusiastically to the lions. They—and so many of the good people of the world who have succeeded them—cause us to admire their courage, without making us wish they would move into the house next door. We cannot help wondering whether the world would not be saved just as rapidly if they would only smile upon it once in awhile.

[From "Protestantism in Australia" in The Hibbert Journal]

Australians have been so occupied hitherto with the material problems that face them in a new land that they have had no time to think deeply about spiritual ones; but with the development of our land a new era may dawn. If once the idea of a new protestantism grips the imagination of Australians, that spirit of daring . . . which made our soldiers achieve so much in the great war will enable them to evolve a new system unfettered by the mistakes and errors of the past, in which the gospel of Jesus will have a truer and grander interpretation than it has ever yet received; in which justice, mercy, and truth will be supreme.

[From "Private Rights and Civic Beauty," by Stephen B. Stanton in The Unpartizan Review]

There has, perhaps, never been a time when our public was so alive to æsthetic values in municipal enterprise as now. A civic pride has sprung up that bids fair to transform many of our cities; scarcely a place of importance but cherishes on paper or actually has on foot some scheme of magnificence for its public places and structures, some grandiose layout of park, bridge, or boulevard. . . . As Senator—, to whom this movement owes so much, once said: "People are realizing the satisfaction which beauty gives in the common affairs of life, and their realization of this is increasing more and more." No longer, for instance, are they content "that the landing place of the stranger, whether by rail or water, should be the most forlorn, abandoned, and repulsive part of the town." In fine, "communities are no longer satisfied with the old method of accidental growth."

[From Life]

We are told that the gray squirrel is becoming extinct. He is going the way of his larger friends, the buffalo and the Indian. He had a good time while it lasted. There were trees to be climbed . . . homes to be built, food to be gathered, and children to be raised. The gray squirrel did all of these things and more. He contributed to man's sense of beauty and freedom. He gave something of joy and companionship and abounding love to the world. When the houses began to appear he approached the windows, where the children, with

nuts in their outstretched hands, watched him with glee—at first timidly with his flickering tail in the air, and then with increasing confidence in his young friends. Nobody ever accused him of being an enemy of society.

The real trouble with the gray squirrel was that he sported a coat. It was a beautiful coat that had proved itself quite useful for certain commercial purposes. The hunter with the trap and the gun went after the gray squirrel. And got him.

[Principal L. P. Jacks on H. G. Wells' "Outline of History"—in The (London, England) Observer]

Among the many chapters which tempt us to offer historical criticism we shall select one only-that which deals with the Beginnings of Christianity. This appears to us inadequate even as a summary. Mr. Wells has here adopted the popular but quite superficial view of Jesus as a moral and religious teacher. This, though true of the form in which Jesus began his ministry, is false of the form in which he ended it. The most significant moment in the history of Jesus was that in which he discovered what Mr. Wells in common with moralists in general has yet to learn—the insufficiency of moral teaching, however lofty, to effect the regeneration of mankind. We would urge Mr. Wells and all who think with him to read that scathing Parable of the Wicked Husbandmen, which marks the turning point, and ponder what it means. It indicates a great and tragic disillusion in one who had piped to a world that would not dance, a world that showed itself then as it has always shown itself since, and as it will show itself to Mr. Wells, refractory to moral teaching whether of one kind or another. . . .

Mr. Wells has missed the secret of Christianity, which does not lie in teaching at all, but in something different, higher, and more compelling. It follows, of course, that he misinterprets St. Paul, who took up the mission of Christianity not from the point where Jesus began, but from the far higher point where he finished. St. Paul was a man much more after Mr. Wells' own heart than he seems aware of—to this extent at least, that his vision of the world and of its needs was wide enough to embrace the whole creation, which "groaneth and travaileth in pain together until now." St. Paul went, indeed, much farther than Mr. Wells shows any disposition to go. For he knew very well that the version of the world which is revealed by our senses is by no means the full account of its reality.

[Introduction to a Christian Science Lecture in Gainesville, Texas]

Christian Science, or the Science of Christianity, is the proof of Christianity. As we know, the word science means exact knowledge, or that which can be proved; and Christian Science teaches that this provable knowledge is the law of God, which Jesus said would make men free. He came teaching, "If ye continue in my word . . . ye shall know the truth, and the truth shall make you free." In the tenth chapter of Matthew we find this command which he gave to his disciples: "Heal the sick, cleanse the lepers, raise the dead, cast out devils," and at another time he said, "These signs shall follow them that believe," and enumerated the healing effects of the truth.

Christian Scientists do not think that this great healing message of Truth which Jesus brought to earth was meant for any limited period of time or for any select number of people. They believe Christ Jesus came to save the world from sickness, sin, and death, the enemies of mankind. They understand that this unalterable, unchangeable word of God has lost none of its healing efficacy, that it remains intact

throughout all time and in every age for all them who believe -understand—to lay hold on and appropriate to their needs. It is true that the denominational religions have obeyed but the first part of this command, and it was not until the advent of Christian Science that the world was aroused to the fact that the whole command had to be obeyed. From reading the current literature of the day we gather that some of the denominational churches are now seeing this and saying that the healing element cannot be left out of Christianity. But because some of this teaching seems to be in advance of the age, beyond our present knowledge, there is no reason why we should not begin to put into practice such parts of it as we can understand. This is just what Christian Scientists are doing, and that they are meeting with a reasonable measure of success is a fact that is becoming apparent to the world and is being testified to by growing multitudes.

Christian Scientists do not claim to have understood and mastered all things. They know they are but beginners and they can only hope to do the "greater things" as they progress in the understanding of him who gave the command. This small beginning that they have made, however, has assumed enormous proportions in the life of the average Christian Scientist, for it has brought him so much genuine peace and health and prosperity that he stands ever ready to give every man, who asks him, a reason for the hope that is in him. Christian Science does not proselyte and it does not seek numbers, but it ever seeks to unfold itself to the understanding heart and to the listening ear.

[From Federal Council of the Churches of Christ in America]

The quadrennial meeting of the Federal Council of the Churches of Christ in America, just closed in Boston, marks the greatest progress and the most hopeful outlook yet attained by this body which is the common meeting point of American Protestantism. Those familiar with previous sessions of this deliberative assembly of thirty evangelical denominations were deeply impressed with the remarkably high spiritual and moral tone manifested at the Boston meeting. This is particularly noteworthy in a gathering called to consider the essentially practical problems of church cooperation.

Speaking of the relation of the churches to the national government, the chairman of the Council's Washington committee said: "Neither Roman Catholicism nor Protestantism, as such, has a claim on official positions. It is our function to determine the ground on which our work shall be done. In determining this it is our duty to interpret the free spirit of a pure Protestantism that shall find expression in right legislation and right appointments, that the nation's life shall truly express itself in the nation's government." Another speaker said: "The statesmanship that is needed to-day is the statesmanship of the Golden Rule. The church is the only institution that can furnish it."

The president of the Council for the next four years said: "The most encouraging thing about the Federal Council is the fellowship of those who believe in this work, and their confidence in one another. We are not called upon to manufacture something and ask the churches to adopt it, but we are here to express something that already exists."

[From "A Nation-wide Adventure in Friendship," by Henry J. Cadbury in The Survey]

To those persons who believe that friendship rather than hostility is the best medium in dealing with enemies it seems a thousand pities that history offers so few precedents. . . . It may not be presumptuous to add to this list the "ministry

of reconciliation" now being carried on by the American Friends Service Committee in Germany. . . .

An extract from an article in the Frankfurter Zeitung by a well-known German man of letters is quoted as an illustration of the spiritual effect which the Quaker work has called forth. "We all know that, however considerable this distribution of food and clothing may be, this work by itself is small in comparison with the actual need. But we also know that the spirit from which it springs contains something which could solve the problem of the nations with a single stroke. It is universal good will which has become as absolute as a divine commandment. Will not the future of the whole human race be decided by the question whether this good remains as the indestructible heritage of all religions and becomes the joint product of all religions when at last strife over forms and symbols has lost its meaning? This spirit promises to be a forerunner, like John in the wilderness. That is the reason for the gentle but penetrating force which radiates from it.

[W. R. Inge in The Pilgrim]

Now, if we take the life of Christ Jesus as our example, we shall infer that religion should never be a mood of excitement. Our Lord spent whole nights in prayer, but there is not a trace in the gospels of rapturous ecstasy or strange visions. \diamond \diamond

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Teners.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine'Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

Articles and Testimonies

4 4 4

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. One such letter follows:

MAY I take the opportunity, at this time, to express my deep appreciation of the Christian Science publications, especially The Christian Science Monitor? I might almost say that I study the daily paper, for its contents are so valuable, and afford so liberal an education, along almost every line of right activity. I feel also that it has become such an important factor in directing my reading. Good books have always been a delight, but the Monitor, with innumerable well-chosen paragraphs or excerpts from the writings of the most helpful authors, and therefore the greatest ones, stimulates the mental appetite to such a wholesome extent that one is compelled to re-read the entire volume, or to make acquaintance with it for the first time. And the gems of thought, selected from the works of saint and sage, that one may read in a moment, and remember a lifetime! The poetry too, with the lovely, delicate pictures so exquisitely portrayed, is sure to incline one to an appreciation of verse never experienced before; while the metaphysical article invariably meets the day's particular need. Above all, with what a sense of rest and safety one peruses the pages of this great international newspaper, column after column, knowing that naught will meet the mind's eye but the constructive, the clean and true statements concerning the subjects about which one should be informed. I therefore agree heartily with a casual acquaintance, who, calling himself an infidel, with great dubiety accepted a copy of the Monitor for the first time, and afterwards enthusiastically declared it to be "the greatest daily paper in the world."

Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston.

Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

WHAT OUR LEADER SAYS—By Mary Baker Eddy. Vest pocket folder, 5 cents.

REPRINTS (not printed in English). Two-page leaflets, 17 subjects in German, 14 in Swedish, 9 in French. Ten copies, 10 cents.

THE MOTHER CHURCH—By Joseph Armstrong, A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated. Cloth, \$1.50.

trated. Cloth, \$1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS—By Judge Clifford P. Smith. Paper, 15 cents.

LAW AND WORK for the blind. Printed in New York point, American Braille or English Braille, \$1.00.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission have been set to music as follows:

"The Mother's Evening Prayer," 75 cents. "Christ, My Refuge," 75 cents. "Love," 50 cents.

Communion Hymn—"Saw Ye My son), 50 cents.
"Blest Christmas Morn," 37 cents. "Saw Ye My Saviour?" (John

"O'er Waiting Harpstrings of the Mind," 37 cents.
"Shepherd, Show Me How to Go," 37 cents.

"Saw Ye my Saviour?" (Root), 37 cents.

"Saw Ye my Saviour?" (Root), 37 cents.

The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, \$1.15; half morocco, \$1.40; full morocco, \$4.50; levant, \$5.50; pocket edition, size 45&x636, \$3.50.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate panet ready for framing, 8-inch (mount 12x16), \$1; 12-inch (mount 15x20), \$2; 16-inch (mount 21x29), \$3.50.

(mount 15x20), \$2; 16-inch (mount 21x29), \$3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCHENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18x24 inches, \$5; on India paper without remarque, \$3.50. Smaller reproduction, size 11x14 inches, on Japanese vellum, \$1.25. Photogravue postcards of the Church Edifice and Publishing House, 5 cents.

Clarendon Brevier, heavy-faced, dis-ev morocco, corresponding in size and BIBLES. 01483x. tinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.50.

01440x. Brevier, light-faced type, self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.25.

01683x. Large type Bible, 1034x8 inches, bound in Alaska seal. Specially adapted for use of second readers, \$16.50.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents.

Price List of Bible Concordances and Dictionaries of the English Language supplied on request.

Items such as leather covers for the Quarterly, and cases, either closed or open, for books, Sunday school supplies and other accessories, will be found in the current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

NUMBER 21

Success

ALDEN F. POTTER

n advance pega HERE is a familiar saying that nothing succeeds like success, but then the question arises: What is success? Each individual defines success in the terms of his own experience, and it is easy to conceive of as many different definitions as there are peoples, nations, or languages. But in this babel of tongues, where is the standard that can tell us what the measure of real success is, and to what it can be likened? Is success material or spiritual, does it come from a knowledge of matter or of Mind? Should it be judged by the events of the moment, the appearance of things, or must it be understood from the standpoint of eternity, a basis of indestructibility?

Certainly to be successful is a universal desire. In fact, so universal is the desire for success, that men and nations think hi. Texas s Sentia i a is they must compete with each other to attain it, and even hinder each other's progress. So keen does the competition become at times that one is almost tempted to think that the supply of success is not sufficient to fill all needs. There is evidence of a general fear that the fortunate circumstances conducive to successful effort, and necessary to it, may be withdrawn. Of course, if success just happens and there is but a limited supply of happenings which produce it, then crowding one's neighbor would be a logical thing; but is that premise a true one? On the other hand, if success, like honesty, is a free gift, something which all men may have without limit without interfering with each other, then the struggle of one with another to achieve it is the reverse of true effort.

Success could not exist as an experience of mankind unless it had a creator. To suppose that it is a creation of mortal man or of human thinking, and not of God and His direction, plunges one into shallows and quicksands, because man originates nothing and human thought is not a creator. On the contrary, human thought seeks to find a creator for itself, while its concepts and laws stand or fall in accordance with a law higher than its own. Christianity sums the whole matter up in the statement that there is but one creator; and a Christian must accept the fact that the one creator creates all the success that there is or possibly can be.

To base success upon a knowledge of God and not upon the theories of men puts an entirely different complexion over the whole matter. When God is understood to be divine Principle, infinite intelligence, His relationship to success comes closer to human comprehension. There is no place from which to begin the solution of any problem except the beginning, and the beginning in every case is God, divine Mind. The inspired writer of the first chapter of Genesis saw that fact clearly and laid down the fundamental proposition, "In the beginning God created the heaven and the earth." It follows, then, as surely as conclusion follows premise, that success may be understood, and its presence unfolded to a man, in just the degree that he understands God and His law which created success and perpetuates it throughout eternity.

Success, then, must have an infinite creator and be limitless: therefore the supply must be inexhaustible and ever present. Consider for a moment the fact that at all times and everywhere there is enough for all. No matter how much your neighbor has, still there exists enough for you, enough to fill your cup full and running over. The source is Principle; and spiritually to know and reflect mentally that Mind which is Principle reveals real success, a realization of which no man can take from you. Moreover, this realization is not just a pleasant, abstract theory, interesting to the intellect but incapable of being experienced in everyday life; it is a vital fact, pregnant with power, manifesting itself, in Bible language, as a land overflowing with milk and honey. Jesus put the same truth in this language, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Is success, then, material or spiritual? The philosophy of the serpent insists that it consists in getting something, that it is a material operation and is measured by matter. If this is so its nature is variable and its rewards destructible. The more a man has of it, just that much more certain he is that he cannot depend upon it. On the other hand, conceive of the universe as spiritual, the emanation of infinite Spirit. Realize that Mind is the source of all law and action. In the language of Paul, look not at the things that are seen, the objects of sense, but consider the things that are not seen, the ideas of Mind, "for the things which are seen are temporal, but the things which are not seen are eternal." Ask yourself whether the fact that you are conscious is not the most vital to you of all experiences. Furthermore, is it not the only fact upon which you can base any knowledge of existence? Lose vourself as an object moving about in a little orbit, and find yourself as man, as that which reflects infinite Mind, as being conscious in response to infinite consciousness, Spirit, in whom you live and whose being and nature you express.

Let the seeker after Truth realize that the only success that there is comes from Truth, and is manifested to individuals as the outcome of the practical understanding and daily living of the scientific fact concerning God, man, and the universe. Success is therefore just as omnipresent as Truth. There can be no place where it is not, but, on the contrary, it is the present heritage of all, the visible expression of the real substance of Spirit, predicated on the consciousness and practice of the truth. No matter how much of truth is known or practiced throughout the world, it cannot for a moment diminish the supply for the next seeker or mar his success in its application, for to be conscious according to divine Principle is a universal birthright.

No one will deny that success and right thinking are indissolubly linked together and that thinking is common to all nations, languages, and peoples. True thinking is the primal and eternal expression of real consciousness, or infinite Mind. Thinking, as used in its proper signification, is identical with intelligence expressed, and can only be used, in a scientific sense, when thinking relates to and connects with that which

is true and capable of being demonstrated. Thinking in this real sense is identical with success in the real sense, and since thinking springs from a source that all men have in common, success does the same.

In other words, in the realm of real thinking nothing exists but success. Lack of success has never been created. The God of truth does not sponsor it. No cause upholds it. Nothing exists upon which it can be based and so become a part of the universe. Success is; its opposite is not. Success is simply the natural concomitant of being conscious of life and law as they are and will be throughout eternity. In mathematics, the scientific fact, the only success possible, is the correct answer, which is free to all who think according to its rule. Success in the line of any right desire comes through Principle, impartially to all; like mathematics, the rule is demonstrable. Fidelity to God and intelligent comprehension of His law enable any student of divine metaphysics to write quod erat demonstrandum after the solution of any life problem.

Every student of the Bible loves that statement of Christ Jesus, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." It will be readily admitted that this knowledge of the truth must necessarily free from failure, since the nature of truth is such that it achieves the very summit of success because it lives forever. It must, however, also be seen that the knowledge of truth at the same time frees us from a false, material sense of success, which, when attained, lulls its possessor to sleep in the belief that he really has something. Truth gives us its treasure, but, at the same time, it exposes the nothingness of that which mortals thought was precious, —a success based upon the five physical senses, erroneous, false, and fleeting. Mrs. Eddy in the textbook of Christian Science, "Science and Health with Key to the Scriptures," warns students against this false sense of success, which is but a seeming, in the following words (p. 239), "Let it be understood that success in error is defeat in Truth." When one reflects upon this advice in connection with her definition of error (Science and Health, p. 472): "Error is a supposition that pleasure and pain, that intelligence, substance, life, are existent in matter. Error is neither Mind nor one of Mind's faculties," it is apparent that any seeming degree of success that one may have in building up or perpetuating this false supposition is actual defeat in the real business of life.

"Greater love hath no man"

THE world in general has always been and is eagerly seeking an answer to these questions: What is love and friendship? What is its origin and cause? Why is it so rarely successful? Why is it so often fleeting-a broken reed, a house built on the sands? And how can worthwhile friendships and true affection be brought into our experience? In the fifteenth chapter of John is recorded Jesus' answer to these questions-an answer which, metaphysically discerned through the teachings of Christian Science, changes the concept of love and friends from a material to a spiritual basis. He said, "Greater love hath no man than this, that a man lay down his life for his friends." From the standpoint of the old theological teaching, this passage was commonly supposed to mean that a man should be willing to rescue his friend from danger by risking his own human life, and even if that risking should result in so-called death, he had proved his love for his friend! It is cause for gratitude that, viewed in the light of Christian Science, this belief in

mere martyrdom is dispelled and the real idea of "greater love" is discerned. First, what is Love? On page 465 of "Science and Health with Key to the Scriptures" we find this definition: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." These terms being synonymous are interchangeable, and so Love is Truth, Love is Life, Love is Principle, Soul, Spirit, infinite Mind, and therefore is supreme, divine, and incorporeal, not in man, but reflected and expressed by man. Since God is Love, and man, God's idea, reflects in unity and completeness all that God is, man must express divine Love and exemplify the love of God, good. And because man can express nothing that is unlike God, he expresses nothing that is unlike good; in other words, he can never for one moment be unloving.

Now to find what the meaning of friend is to the real metaphysician: Mrs. Eddy says farther down on page 465 of Science and Health that "Principle and its idea is one, and this one is God, omnipotent, omniscient, and omnipresent Being, and His reflection is man and the universe. Omni is adopted from the Latin adjective signifying all. Hence God combines all-power or potency, all-science or true knowledge, all-presence." If we as Christian Scientists know God to be all the presence there is, then God must be the only Friend there is; and as man and the universe reflect God there must be an infinity of idea expressing friend, and the divine idea being one with Principle and forever in its rightful place is ever available as friend. It follows, then, that friend, according to the teachings of Christian Science, is "God with us" expressed in that manifestation of good that meets our present need.

The one reason that a friend seems to fail us is because we are looking to that friend, yearning for that friend, or leaning on that friend humanly, seeing friend as person, instead of God's idea, as material instead of the expression of Mind's attributes-kindness, patience, meekness, consideration, courage, wisdom, and so on. As the law of mathematics is found to exist in the realm of Mind and is available to all who gain an understanding of its fundamental laws, so a demonstrable understanding of metaphysics is available to all who will apply its fundamental laws to their problems. If your well-loved friend is in Japan or India, California or Connecticut, is he separated from you? Is there a number seven in Japan and a number three in India that you must go after before you can be sure of a ten as the bringing together of these two numbers in your problem? As the infinity of numbers is ever present, so is the infinity of friend. Just as soon as we let go our human clinging to person and see "God with us" everywhere expressed, and rejoice in and reflect the love of good in our daily living, right then and there shall we find the false belief of distance annihilated and our friend, all that is real, with us.

Jesus wasted no time in believing in distance or separation. He was consciously about his Father's business, and when he stepped into the ship it was immediately at the other side, proving the power of spiritual law over material belief. And he has left this promise: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." His works were done for all time and he completely refuted material law; but his works were those of the Way-shower, the pioneer, often performed before the ignorant and unenlightened, whose curiosity was their only reason for listening to him. The requirement for us is that our works must be accomplished through a constantly increasing love for and understanding of spiritual law, not only because it makes possible the "signs following," but because

spiritual law is the only real, the only right, and consequently the only true law.

When we learn to seek first the kingdom of heaven, the consciousness of good as the only reality, the result is good manifested, as a natural sequence. When we stop outlining for ourselves the love of this or that friend as desirable and seek the further understanding of God and His idea, man, as the only desirable thing, the natural result will be greater manifestation of friend and friendship, an increasing reflection of Love as our concept of Love rises and broadens, an increasing joy in giving and sharing both love and friends. "Greater love hath no man than this," then, that he lay down (or off) his belief of and ease in materiality, the limitations of socalled human life, and that he replace this false concept with the truth of being, the understanding of spiritual law that lovingly and earnestly and faithfully serves the one Friend, God, good, and through this consecration the countless manifestations of "God with us," or friends, that he will have with him throughout eternity.

Joy

LESLIE M. KNAPP

To the sincere student of Christian Science, the greatest joy, the deepest happiness, lies in acting in obedience to Principle. In the practice of peace, love, compassion toward all men, in the endeavor to judge righteous judgment in all things, in the striving to curb for one's self all the lusts of the carnal mind, all malice, passion, hate, envy, covetousness, deceit, slothfulness, lack of moral courage, fear, and the like, come happiness and gladness, the sweet and certain sense that God is all-powerful Love, that man, His perfect child, Mind's immaculate idea, can know, can feel, no error.

True joy and satisfaction must ever follow obedience to the commands of Christ Jesus. How many times, in the Scriptures, are we bidden to rejoice! "A man of sorrows" Jesus was called; but it must be a source of satisfaction to all Christian Scientists that the revelation to Mary Baker Eddy, which she gave to the world, of the Principle which inspired the life and work of Jesus, has eradicated the concept of Jesus as a man of sorrow, and replaced it with the thought of him as a man of joy, whose words and example to all were of peace, compassion, brotherliness, love, rejoicing.

No one can measure, no thought can picture, the depth of the joy which Jesus must have felt during his three years' ministry, as daily he saw the illusions of sin, sickness, disease, lack, death, disappear before his pure understanding of the allness of God and the nothingness of evil. The happiness which he spread to those around him-the joy of those healed from seemingly incurable diseases, the gladness of those who received their dead living through his word, the delight of those who, like the woman taken in adultery, saw through the Christ the better way of life, show truly that the so-called "man of sorrows" was one who reflected joy and happiness to all who were willing to believe his word. Looking down to later days, we see the joy and happiness reflected by Mary Baker Eddy to mankind. Reading the story of her life, we note how she preserved her good humor and love for mankind through the unrealities of persecution and other error which sought to deter her from her inspired purpose, living to see thousands healed, through her revelation of Christian Science, from so-called incurable diseases, from belief in the pleasure or necessity of sin, from the grip of evil habits.

To-day there are but few communities on the globe in which there are not some who have cause for joy and happiness through the self-abnegation and joyousness of Mrs. Eddy. They are following her example, and that of Jesus, if they are true students of Christian Science, in healing the sick, in reforming the sinner, in casting out evils, in spreading the message of happiness and love. On page xii of the Preface to "Science and Health with Key to the Scriptures" Mrs. Eddy says of herself, "In the spirit of Christ's charity, -as one who 'hopeth all things, endureth all things,' and is joyful to bear consolation to the sorrowing and healing to the sick,-she commits these pages to honest seekers for Truth." All through the ages, Principle has shown to men this sense of joy in various degrees. Organizations designed to mitigate the poverty, sin, and disease of the world have been formed, have vainly endeavored to solve their problem, have attracted enthusiastic workers, filled with a commendable zeal to bring comfort to men, but all have failed to achieve permanent relief, and one by one have disintegrated and will continue to disintegrate until the one perfect way is found which shall bring joy to all mankind. Christian Scientists to-day know that the one perfect way, the way of the true understanding of God and man and the nothingness of evil, has been found in Christian Science, which succeeds because it is based squarely on the rock of Principle and not on the shifting sands of mortal opinions and belief.

It is the inalienable right of every one of us right now to possess joy. God, good, never created fear nor evil; it is fear and evil that would take away joy. As we know that neither one is real, that they have no presence before God, who is ever present, so does joy become apparent to us. But it cannot be ours alone; we must share it with all mankind. To do that, we must see to it that we do all that we rightfully can, not exhibiting a zeal without knowledge, or casting pearls before swine, but casting all error out of ourselves, loving our neighbor, healing the sick, raising the dying, and reforming the sinner. To attain real joy, one must begin with himself. Before we can spread spiritual joy, the only true joy, to our neighbor, our own thought must be clean. In order to heal others, we must know what true healing is. With this process of self-purification, joy begins-never to cease, if we work rightly; for, says Mrs. Eddy on page 569 of Science and Health, "He that touches the hem of Christ's robe and masters his mortal beliefs, animality and hate, rejoices in the proof of healing,-in a sweet and certain sense that God is Love." And Isaiah says, in a wonderfully comforting passage: "Therefore the redeemed of the Lord shall return, and come with singing unto Zion; and everlasting joy shall be upon their head: they shall obtain gladness and joy; and sorrow and mourning shall flee away."

Holidays

LLOYD ROBERTS

To the popular mind a holiday means a day of rest from labor, or a day of amusement. But what is the original meaning of the word? Holy day, that is, a "consecrated day," says Webster, who defines holy as "set apart to the service or worship of deity." Such holidays are desirable indeed and are available to all at any season of the year. Any day given even in part to the contemplation of things of the Spirit is a holy day. Any day in which we draw nearer to God in our thought, thus drawing farther away from matter, becomes to that extent a holy day. "Who did hinder you that ye should not obey the truth?" Nothing can hinder us, neither long hours, difficult work, personality, nor bodily conditions. Holidays are at the service of all who care to avail themselves of them, yea, three hundred and sixty-five a year!

Perhaps you hear some one saying, "That's all very fine, metaphysically speaking, but as long as we are in this body we must have rest and amusement." Very true. We should have rest and peace and joy without stint, pressed down and running over. But no one can possibly maintain that the physical body, matter, can experience rest or happiness. Feeling being entirely mental, such states must be mental. So the question arises, What will bring these blessings into our experience? Will a condition of complete inaction, that is, insensibility, provide the rest wanted? Obviously not. One will have to be conscious in order to know and enjoy the consciousness of rest. Therefore thought must be active, but active in the right way,-that is, harmonious, joyous, alert, without friction, worry, or apathy. Now all who have sipped at the fountain of Truth know right well that such a state can only be won in "the service or worship of deity," that no amount of travel, scene shifting, labor changing, or amusement can bring it. "The kingdom of God is within you," and one has only to enter into his closet and pray, to prove that this is so. Mrs. Eddy says, "God rests in action" (Science and Health, p. 519). Being which neither slumbers nor sleeps, as the Scriptures aver, but is omniactive Life, Truth, Love, must be always "at rest," that is, harmonious, complete.

Then again Jesus says, "Come unto me, all ye that labour and are heavy laden, and I will give you rest," and yet he was the busiest man that the world has ever known, giving scant time to sleep and food and recreation. He must have been resting in action; finding that, as Mrs. Eddy states in the paragraph already quoted from, "the highest and sweetest rest, even from a human standpoint, is in holy work." In short, he was about his Father's business. Ah, that is rest and joy indeed, the joy that "no man taketh from you," the joy of our Lord. Will you seek it at the sea beach, on the forest trail, in the palatial hotel? Will you discover it in any or all of the broad and easy ways of the five physical senses? Will you find it in person, place, or time? Mrs. Eddy answers clearly (Science and Health, p. 60): "Higher enjoyments alone can satisfy the cravings of immortal man. We cannot circumscribe happiness within the limits of personal sense. The senses confer no real enjoyment."

As this truth dawns more clearly upon the understanding we shall cease to waste precious moments in longing for the holidays and turn all our attention to making this and every day a holy day. Thus we shall wear the holiday spirit, transforming our workshop, office, or ditch into a place of joyous activity and helping to free all our fellow workers from the bonds of servitude to matter.

[Written for the Sentinel]

Hope Unbound

MAUD W. MAKEMSON

FLING wide the closed portal!
Loose the imprisoned thought;
Let hope on wing immortal
Fly forth to seek a haven
As dove of old once sought—
To seek a glorious haven,
With heavenly blessings fraught.

Too long with cruel fetter
Has the longing heart been bound.
To holier land and better
It wings, to meet the infinite
Where Truth and Love are found—
To meet the glorious infinite,
Where hope shall be unbound.

True Labor without Self-Righteousness

ADELAIDE SINGLETON

N the eighteenth chapter of Luke we read the parable of two men praying. The human mind in condemning the different conditions of self-righteousness as claimed by the Pharisee often is inclined to overlook the most salient feature here expressed, "or even as this publican," although by his vivid judgment Jesus clearly made it the most important. Comparison is always breaking the second commandment. "Thou shalt love thy neighbour as thyself," that is, see spiritual idea as all there is to neighbor. When alluding to this parable Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 448), "Blindness and self-righteousness cling fast to iniquity." It is not unusual in a group of people when discussing some action of another's to think as the Pharisee, perhaps in a more modern manner, as thus: "I may have my faults but thank God such or such (naming a specific error) is not one of them." Now Paul puts this all very clearly in the first three verses of the second chapter of his epistle to the Romans. It is as though he said, "If you believe in the reality of these things-in the reality of life, substance, and intelligence in matter, then you are on the same plane of thought or judgment as those who do these things." Then in the eleventh verse of the same chapter, in his peculiar, concise way he writes, "For there is no respect of persons with God." Spiritual idea is alone worthy of the recognition of divine Mind. Close study of these writings of Paul reveals that the self-righteousness of his time is the self-righteousness of to-day and will continue to be the selfrighteousness of all ages until the world changes its wrong concept of God and man to the right concept, namely, divine

In Isaiah we read, "Behold, I create Jerusalem a rejoicing, and her people a joy." We grasp the full meaning of this prophecy only as we understand what Mrs. Eddy says on page 468 of Science and Health: "The spiritual universe, including individual man, is a compound idea, reflecting the divine substance of Spirit." Here she plainly states that the compound idea is spiritual; therefore the entirety of this compound idea must be spiritual.

When, therefore, the world understands labor as spiritual idea, the labor problem will be healed. Labor is the activity of the divine Mind expressed by man. This activity is always harmonious, joyous, perpetual, and successful. In the infinity of this activity there are no opposing forces which the material senses recognize as discord, discontent, dishonesty, or injustice. These errors form the foundation of a belief in a world of imperfections and inequalities, which is always the lie about the spiritual universe governed by divine Love. As Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). A sense of inequality is the error of comparison under another name. These errors never enter the government of infinite wisdom and justice; to do so they would have to pass over the touchstone of Truth, which means instant destruction to error. In the vineyard of divine Mind spiritual ideas are, in the picturesque words of the psalmist, "the cattle upon a thousand hills," which represent the unlimited arena in which to labor. On these hills the pastures are the fruits of the Spirit, expressed in love, meekness, loving-kindness, tolerance, joy, happiness, and unselfishness; and the utilization of these qualities is true labor, which brings us into the highest peak of activity—the Horeb heights.

[406]

Selflessness is the keynote of labor; it is that desire

which goes out to do some work acceptable to "our Father."

Equipped with this honest desire, man knows he will suc-

ceed, for Principle controls all effect and man learns he is but

the instrument of Mind, filling his functions as individual

man. As idea in Mind he is always in his right place at his

right work, helping the consummation of Isaiah's prophecy

of joy. Paul gives a very clear statement of man's functions

in the third chapter of I Corinthians, and Shakespeare articu-

Therefore doth heaven divide

To which is fixed . . .

The state of man in divers functions.

Setting endeavor in continual motion;

The First Commandment

Fall the benefits to be gained through the study of Chris-

tian Science, that which is of greatest value to humanity

is without doubt the ability to reason in accord with divine

Principle. This ability to distinguish between right and

wrong or to judge rightfully, is the very source of innumer-

able joys and comforts. It furnishes for the student vivid

glimpses of a life which is entirely separate from any sense

of the physical, and causes him to realize the infinitude of

Now not the least of these revelations brought about by

the use of reason is the significance of the Master's answer

to one of the scribes who came to him in the temple at Jeru-

salem and asked him, "Which is the first commandment of

all?" Jesus answered him, "The first of all the command-

ments is, Hear, O Israel; The Lord our God is one Lord:

and thou shalt love the Lord thy God with all thy heart, and

with all thy soul, and with all thy mind, and with all thy

strength: this is the first commandment." Then did Jesus

immediately do that thing which is so requisite in the demon-

stration of God's ever presence and omnipotence, namely,

he denied the human sense testimony which would say there

was other love than that for the Lord our God. He said, "And

the second is like, namely this, Thou shalt love thy neighbour

as thyself. There is none other commandment greater than

God supremely made it an impossibility to do otherwise than manifest this infinite love toward all mankind. It was a definite statement to the effect that hatred, envy, and malice are false and untrue conditions.

beloved disciple, in the words: "And we have known and believed the love that God hath to us. God is love; and he that

dwelleth in love dwelleth in God, and God in him. . . . If a man say, I love God, and hateth his brother, he is a liar: for

he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" Here we find John

endeavoring to silence the lie that would make it appear that nan could reflect anything but absolute Love.

The Leader of the Christian Science movement, Mary

iker Eddy, realizing the intent of the great Way-shower to

ke it clear that the denial of error was equally as essential the affirmation of truth states in her Message to The

her Church for 1901 (p. 15): "Error uncondemned is not

fied. We must condemn the claim of error in every phase

ony, it quite naturally directs attention to the neces-

[407]

ler to prove it false, therefore unreal." esumably because mortal mind is always bearing false

sity of obedience to that which is an assumed truth; or, in other words, it would have mankind to realize a need of loving that kind of man or brother of which mortal mind or the lie itself bears testimony. The result has ever been and will ever be the manifestation of a false belief of love or the love for some kind of humanity; yet Jesus admonished all mankind to love God with all the mind and strength. Mankind, however, putting aside this admonition of Jesus, have thought better to accept the lie that there is more than one kind of love, that pure love of God, and have grown to believe that pure love is only to be realized through the purification of a false sense of love. In consequence of this belief, mankind are found seeking to love a mortal, material, physi-

perfect sense of Love. Christian Science, or a scientific, demonstrable understanding of the teachings of Jesus the Christ, has revealed the futility of this false reasoning and has brought to light true and rightful judgment. The fact has been established that the only true love is that infinite love of God the Father, and that man's first and last great duty is to love God with completeness of heart, of soul, of mind, and of strength. Thus is the false belief of dislike, animosity, envy, or hatred obliterated.

cal creature, in the hope that thereby they may attain a

Through the recognition of this truth the world to-day is more awake to the necessity of striving for an understanding of God and man's relation to God in order that all may gain this perfect love. It is aware of the snare in wait for those who are continually searching about after means whereby they may love their brother man, while the means is at hand. The lesson has been learned, the problem proved, that only through this absolute love for God are mankind found to be reflecting love for one another.

On page 210 of "The First Church of Christ, Scientist, and Miscellany" our Leader admonishes us: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full." It may well be said that he who keeps his mind so full of love for God and His creation that envy, malice, and hatred are unknown to him, is necessarily manifesting love toward his brother whom he hath seen. In this manner and only in this manner can the brotherhood of mankind be established upon earth. Hence the great importance attached to that brief statement of our Master to one of the scribes in the temple at Jerusalem, making it very plain that we need never worry one particle about loving our brother man, for such is the fulfillment of a true and whole love for "our Father, which art in heaven."

Responsibility

THE Protestant church has always placed the doctrine of personal responsibility in the front of its teaching. reason is obvious: the Protestant refuses to admit for one moment that any individual can in any way assume responsibility for his neighbor's thoughts or acts. Mrs. Eddy made her acceptance of this argument quite clear in the early days of her ministry. On page 5 of "Christian Healing" she writes, "This truth is, that we are to work out our own salvation, and to meet the responsibility of our own thoughts and acts; relying not on the person of God or the person of man to do our work for us, but on the apostle's rule, 'I will show thee my faith by my works." Nevertheless, the world is filled with the descendants of Uzzah, always ready to steady the ark, and quite unwarned by the fate of their prototype. These Uzzahites have not enough comprehension of the slenderness of their own grasp upon Truth not to fall victims to the suggestions of spiritual self-satisfaction, and fail totally to realize the fact that, as Christ Jesus warned them, "they be blind leaders of the blind. And if the blind lead the blind, both shall fall into the ditch."

This working out of a man's own salvation demands all his time, consecration, and energy. If he is wise, therefore, he will test his spirituality by his ability to heal sickness and sin rather than by his success in inducing his neighbors to accept his opinions. The way to bring about the acceptance of those opinions is quite otherwise. It is, first, to live so closely in obedience to Principle that your opinions will cease to be opinions, so that instead you will reflect Principle; and then to give utterance to Truth so clearly and emphatically that your words will carry conviction with them. Then you will not have to argue with people to induce them to accept your opinion; they will be convinced of Truth through your words, and being at one with you in an understanding of Principle, will inevitably be found acting with you. Thus you will be relieved of the responsibility and saved from the doom of steadying the ark for your neighbors. Yet you will have met your responsibility to Principle by simply living so completely in accord with Principle as to reflect Truth. Such conduct illustrates the difference between Uzzah and Christ Jesus, between the mentality alert with fussiness and determined to get into the limelight, and the mentality which understood the protection afforded by "the secret place of the most High," and was so sure of the power of Truth as to be able to say, "Heaven and earth shall pass away, but my words shall not pass away."

All of this illustrates in an interesting and curious way the nuance of words, and the extraordinary difficulty of expressing spiritual truths in human language. There is, that is to say, a personal responsibility, and yet there is no personal responsibility. There is a personal responsibility, and a very actual one, in living in accordance with Principle yourself, and a personal responsibility to your neighbors in becoming what Christ Jesus demanded when he said: "Ye are the light of the world. A city that is set on an hill cannot

be hid. Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house." But here a man's personal responsibility ends in sanctifying himself, as Jesus demanded, for the sake of others, in order to show them the Christ. When it goes beyond this, when it undertakes to persuade its neighbor to pursue a certain course, when it argues with him, cajoles him, threatens him, all out of its knowledge of what is good for him, then it has assumed the garments of Uzzah, and the punishment of Uzzah, in some degree or another, awaits it. "Honesty," Mrs. Eddy writes, on page 453 of Science and Health, "is spiritual power. Dishonesty is human weakness, which forfeits divine help." It is dishonesty which, for personal motives, however speciously conceived, forces its advice upon its neighbors instead of letting "patience have her perfect work." Wiser than such the psalmist sang, "Be still, and know that I am God."

It is in the struggle to be honest that one of the strongest demands is made upon a man. There is no shadow of a doubt of his responsibility here. It is useless for him to try to satisfy his conscience by declaring that he is doing the best he can, while yielding to the evidence of the senses all along the line, and so rendering himself incapable of doing his best. In such a case his best can only bring to him the reward of ignorance, just as the mathematician, however good his intentions, finds the test of his endeavors in his obedience to the multiplication table. "Hell is paved with good intentions," to quote the form of the old proverb in the language in which Dr. Johnson dressed it. Pious resolutions, as he pointed out, amount to very little; and in Christian Science when a man holds, in one hand, the measuring rod of Principle, and, in the other, the test tube of demonstration, they amount to even less. Surely it was for this reason that Mrs. Eddy, under the heading of "Alertness to Duty," wrote on page 42 of the Church Manual, "It shall be the duty of every member of this Church to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind. By his works he shall be judged,—and justified or condemned."

It is clear then that if a man is to avoid the pitfalls of what is regarded humanly as responsibility, while holding himself obedient to spiritual responsibility, he must use the measuring rod of Principle, and the test tube of demonstration. In doing this there is no difference whatever in the problem that faces him all the time in his efforts to attain the theory and practice of scientific Christianity. Fortunately, the problem is the simplest imaginable. The difficulty is not in understanding what is required, but in doing it. Paul found that out centuries ago, and wrote to the Church in Rome, "For the good that I would I do not: but the evil which I would not, that I do." It is always the same story of the lusting of the flesh against Spirit.

FREDERICK DIXON.

Eyes and Ears

Any one who stops to reason must admit that material eyes do not see nor material ears hear anything of themselves. From the ordinary human standpoint, it is the mental impression that constitutes the seeing or hearing. How the perception through eye or ear is transmitted to the brain has never been discovered. In fact, the supposed relation between any external phenomena and mental processes has not been determined by anatomical or psychological investigation. Further than this, it is manifest that the mere physical seeing or hearing amounts to little of itself. If an English-

That this is a fact, any one, whether he has studied Chris-

tian Science or not, must acknowledge. Christian Science

goes further, however, and shows that this human process

of recognition is but counterfeit of the activity going on in

the true, divine consciousness. Though the mortal experi-

ence of seeing and hearing is primarily mental and not physi-

cal, it is only the illusory belief of an utterly supposititious

mortal mind. The true seeing and hearing, which are thus

seemingly counterfeited, are the expression of divine intelli-

and hearing so clearly that the study of her explanations has

proved healing to many. On page 5 of "Rudimental Divine

Science," for instance, she says: "Soul is the only real con-

sciousness which cognizes being. The body does not see,

hear, smell, or taste. Human belief says that it does; but

destroy this belief of seeing with the eye, and we could not

see materially; and so it is with each of the physical senses."

It is Soul, then, not body, which really perceives and com-

prehends. Soul, as Mrs. Eddy teaches, is simply a name for

the one God, infinite Mind, which manifests itself rightly as

all spiritual activity. Of course Soul, or God, perfectly main-

tains its faculty for perception without any possibility of

Seeing and hearing are both largely constituted of atten-

tion. By being rightly attentive, a man may choose what he wishes to hear or see in the midst of a seeming medley. The

common limitation is that most people are trying to be atten-

Shepherd, show me how to go

attention in the wrong direction. The right direction Mrs.

where she says:-

Now the listening for the divine voice is not a physical expec-

tation of something supernatural. The divine Mind, infinitely expressed, includes all true discernment, comprehenion, understanding. The being attentive to the one Mind one requires individual consecration in every way. The till small voice" of infinite intelligence is experienced by

real man through his conscious dwelling in Mind, not ter. As the spiritual idea of Principle, man is attentive lly to Principle, to divine Love. mortal belief of limited hearing or seeing subsides in

resence of this true attention, understood and demon-

in practice. One who believes that he is deaf or blind to rejoice that he can be truly deaf or blind only to

[409]

error. By looking gladly to Mind, he can prove that he finds in Mind all that there is truly to know, to see, or to hear. The point is that his whole desire must be to see and hear God, Truth, and not any mere material sense of things.

Only by seeking and being satisfied with the understanding of God, can one prove that he hears and sees with the fullness

of spiritual sense.

The material senses, whether of sight, of hearing, or of smell, of taste, or of feeling, have to be subjugated through the understanding of spiritual sense as sufficient for man. Every mortal, even though his human faculties may seem to him acute, needs to learn how to hear and see and experience good spiritually. He learns by dropping his mortality for the limitless freedom of immortality here and now. Interestingly enough, the belief is that the sense of hearing peculiarly stimulates the emotions. Music, for instance, is an especially emotional influence. In the turning away from human sense testimony to the divine idea, a man, therefore, must be content to reason accurately in accordance with Principle. Human emotions have to give way to the calm activity of the divine Mind in order that spiritual sense may be demonstrated as unlimited faculty of man.

One does not thus lose anything of hearing nor of true enjoyment. Instead, one learns to appreciate entirely spiritual harmony, of which any human combinations of sounds are but a counterfeit. It is this understanding which replaces any belief of discordant hearing with true concord. The hearing which is of God is not an emotional function, though it is a spiritually happy process. Human emotion subsides with the reduction to nothingness of the belief in matter. Thus the divine Mind is found to be the only moving influence. As Mrs. Eddy says on page 25 of "Unity of Good": "Mind is not, cannot be, in matter. It sees, hears, feels, tastes, smells as Mind, and not as matter." So each student of Christian Science patiently has to prove for himself that his real living is in Mind, not in matter, and in so doing he demonstrates the immortality of true hearing and seeing, in fact of all spiritual sense, through the disappearance of just so much of the limitations of human circumstances. In the divine Mind, the real man lives, moves, hears, sees, and has his whole being, rejoicing in the actual consciousness of all true freedom and harmony. GUSTAVUS S. PAINE.

Assurance

FLORA F. GOOCH

When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee.-Isaiah.

OVING Father, piloting me Through the waves of the boisterous sea, Proving always, Thy power to show, Though we pass through the waters, They cannot o'erflow;

Gracious Father, governing me In every experience through the sea Of mortal beliefs and scenes of woe, How glad I am to pass with Thee Through the deepest waters, For they cannot o'erflow.

Blessed Father, controlling me, Living promise to humanity! Thou bearest us up to a height so high That we see and feel and readily know, Though the waves overtake us, They cannot o'erflow.

Testimonies of Healing

It is with a heart full of gratitude that I send this testimony of the benefits received through Christian Science. I sought Christian Science treatment after being bedridden for nearly ten years, having lain in one position most of that time. I had been sent to the infirmary three times for operations. The third time I was sent home without an operation as "incurable," all that nursing and surgery could do having been done for me. I gave all my clothes away, thinking I should never get up again, but Love has supplied all my needs in every way. Very soon after having Christian Science treatment I was able to move myself in bed and then to sit up, and later was able to get out of bed. I then found that one leg was so much shorter than the other that only the tips of my toes touched the floor, and one shoulder was higher than the other. The healing of this condition came suddenly, early one morning while I was reading The Christian Science Journal. I got out of bed and found I could put one foot down as readily as the other.

I cannot express in words the gratitude I feel for the healing that has changed me from a helpless invalid, having to rely on others for everything, to a happy and useful woman again. I have also proved that age is not an obstacle to healing and usefulness. As I look back I can see how Truth has led me every step of the way. Many times the messages in the Christian Science periodicals have helped me when the way seemed long, and to those whose healing seems slow I would say, Be not discouraged, for it will surely come if we faint not.

Christian Science has given me a better understanding of God and man, also of the Bible. My earnest desire is that I may daily learn more of this beautiful truth and help others. I am grateful for the happy time I have had in the Christian Science church and for the loving help that has been given me.—(Mrs.) Mary Bancroft, Patricroft, Lancashire, England.

Some time ago I found myself, according to the human sense of things, a total and abject failure in a business way, and pretty much so in a physical way. I had, as it appeared to me then, been deprived of many deserved opportunities by an unkind fate or an ill arranged world, and been cheated out of others by the selfishness of men, and lost still others through my own shortsightedness in earlier years; in short, mine was the same sort of story that thousands of other men of about my age tearfully whisper to themselves. An advertising writer by profession, I had drifted out of touch with the business in an attempt to establish another sort of business of my own, had lost all my money and gone into debt to boot in this enterprise, and then, attempting to find employment in my old line of work, could find absolutely nothing to do. To the bustling advertising world I represented only a "has-been," while for other lines of work I could show no training or aptitude.

Having exhausted every human resource, and being what the world calls "down and out," I turned to Christian Science. Within a few weeks—less than three, I know—of my first treatment I was offered, without any solicitation on my part and from a most unexpected source, a piece of work along lines I had never thought of at all. Nevertheless, as it promised me two hundred dollars in cash I undertook it, and it was performed with an ease and satisfaction that was astonishing. On its heels came another opportunity, then another, and another; in fact never from that day to this have I been without something to do that

I could do, and never has my work paid me so well in money, nor was I ever at any time in the past able to do such good work as it is easy for me to do to-day. I have been able to pay up all my debts and have money ahead again.

Material prosperity came with my growing understanding of what is Christianly and scientifically "practical," and physical health has been manifested also. I had suffered for about ten years from indigestion and had a rupture, sustained when a boy, that was gradually getting more serious; both of these troubles have absolutely disappeared under Christian Science treatment. It was a sore temptation, after first coming into Science, to be "practical" according to the old way of thinking, and continue the before-breakfast calisthenics and long outdoor walks which were supposedly necessary to one following a sedentary occupation, but by applying the same understanding of what is "practical" that had worked out in my business problem, I have never since found it necessary to exercise for health's sake, and yet have never been so well.

For the illuminating help and unlimited patience of a practitioner in trying times, for the inspiration and devotion of our Leader, Mrs. Eddy, in fathoming the rules of scientific being and revealing them to mankind, and to Him from whom this blessing flows, my gratitude is such that I am not able to fully express it.

HERBERT WATSON, New York City, New York.

4

Five years ago last November I turned to Christian Science for help, after two years of suffering from tuberculosis of the right knee. Through the loving and patient help of the practitioner to whom I went for help, I was able in ten days to discard a cast which I was wearing, a rubber bandage, and the use of crutches. A belief of heart trouble was met during these treatments, although it had never been mentioned to the practitioner. During the past three years I have been able to put aside glasses, which I had worn for years. Last year a fall resulted in a dislocation of the left knee, and at the same time I seemed to be suffering from nervous prostration. Through the patient and loving help of a practitioner I was healed, and was able to make a trip to the Middle West in less than six weeks after the injury. Since then I have asked for help for many things, and have received it in many ways.

I am learning to see man as the expression of God and to know only good of every one and in so far as I have been able to do this, many opportunities for good have been opened to me. I am very grateful for many beautiful demonstrations, and for the help I have received from each practitioner appealed to. I am grateful to God for His goodness to me, and to our Leader, Mrs. Eddy.

(Miss) LALLA E. MORRIS, San Francisco, California.

4

Before I knew about Christian Science I believed that our well-being depended upon our obedience to what we call physical laws. Christian Science has taught me that there is only one law governing man and the universe, and this the law of God. This law is based on the will and purpose of God, which are logically in accord with His nature, love, therefore the law of God is wholly good and accomplishes that which He pleases. On many occasions my being was far from satisfactory even to human sense, but through Christian Science treatment and my own understanding harmony was restored.

My very first proof of the operation of God's law was the

correction of the belief that I was without friends. I learned that all who are striving to do God's will are of the household of God. Realizing this, I no longer felt lonely. When I thought that I could not communicate and converse with the people around me on account of speaking a different language, the law of God revealed to me that all are ideas of the one Mind and forever included in that one Mind and working to the same end; I learned that it was impossible for me not to understand the language of Love. The Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, from which I learned English, was my only and impersonal instructor.

The law of God has guided me to the fountain of living waters. When I was filled with countless beliefs of physical ills and mental depression, it was the law of God which annulled one after another and gave me a weapon—the truth—with which to defend myself against the false accuser of man. When I believed that I had lost all my hair, the law of God revealed to me that perfection and completeness are ever present, and Mrs. Eddy's words were proved true, that "God is more to a man than his belief, and the less we acknowledge matter or its laws, the more immortality we possess" (Science and Health, p. 425). My hair was restored. I have been healed of colds, nervousness, fear, heart trouble, constipation of lifelong standing, and gas poisoning.

One of the greatest blessings which I have derived from Christian Science is the enlarged understanding of Mrs. Eddy's scientific statement of being, as given on page 468 of Science and Health, showing the allness of Mind, and not only the powerlessness of matter, but its nothingness. I am most grateful for the life and work of Christ Jesus the Wayshower, and equally so for Mrs. Eddy's selfless love and for all the blessings which have come into my life through Christian Science.

(Mrs.) MILLY HUTTON, New Rochelle, New York.

4

It is with deep gratitude that I send this testimony to express my appreciation for the great benefits which I have found in Christian Science, and especially during my service overseas, when it taught me the omnipresence of God as my only defense against the dangers which tried to beset us. By constantly adhering to the truth of being and the demonstration of good I was able to overcome all sense of limitation and to master any evil propensity which tried to predominate.

Shortly before leaving for overseas, a dear friend presented me with a complete set of pamphlets, which I took with me and from which I gained a great deal of benefit. After reading them I distributed a good many to my fellow soldiers who desired them, thereby feeding the hungry and satisfying a desire to help those who were in need.

My service in France and Germany on dispatch duty for our headquarters kept me on the road a great part of the time and gave me a general idea of the situation. On one occasion I was called to make a special night delivery during the Saint-Mihiel offensive, and although my work did not necessitate going up to the front lines of defense, it was a rather hazardous trip because it had to be made in the dark, as lights might have betrayed our location to enemy aeroplanes. In returning about three o'clock in the morning I was thrown from the motorcycle. I was shortly afterwards picked up and taken to a French hospital close by in a semiconscious condition. I had fallen headfirst, lacerating my face, and was in a rather precarious condition. I was very calm through the whole proceeding and

held no fear whatever as to the results, and was soon able to clear my thoughts of the error and to know that the real man in God's image and likeness is indestructible, and that any thought of imperfection must be cast out before a complete healing could be realized. I always carried a copy of the vest pocket edition of Science and Health with me, the reading of which I found a great comfort.

After the wounds were carefully dressed by a French physician I was put to bed and soon fell asleep. When I awoke the next morning I immediately cabled to a Christian Science practitioner in New York for assistance. I clung to the truth myself so that I experienced very little pain and the next day was able to be transferred to an American hospital some distance away, where I was also kept but a short time. I was incapacitated less than two weeks and was able to return to my former duties with but a very slight trace of the accident. Those who witnessed the case expressed surprise at the rapidity of the healing, which I owe to the splendid work of the practitioner and to my own understanding, though slight, of Christian Science.

I feel so grateful for all the blessings which Christian Science is bringing to me, and I am trying each day to gain more understanding of the truth which is liberating mankind from the bondage of evil, and to demonstrate the supremacy of Mind. Whether the problem be in the form of an accident or a claim of sickness, our remedy is ever present and will conquer any form of error if rightly applied. I had the pleasure of distributing about ten copies of Science and Health among the boys during my eighteen months' service overseas, besides other literature which was sent to me from Paris, and from friends at home.

ROBERT E. HOBBS, Portland, Oregon.

4

It would be very ungrateful of me to wait any longer to give my testimony for the many blessings that have come to me and my family through the knowledge of Christian Science. I did not turn to it for any special physical healing but because what I had heard of its teachings appealed to me as the right interpretation of the Bible. I could not accept the old teaching of predestination; but that God made all and made only good, therefore did not predestinate evil, I could accept.

My first benefit received through Christian Science was freedom from the bondage of fear of sickness for my family. I had an instantaneous healing of asthma nine years ago and have not had the slightest symptom of it since. This proved to me that change of climate was not necessary for relief or healing. I have depended on Christian Science as my only physician for eighteen years and have always found it available for every need.

I sincerely thank Mrs. Eddy for proving to us that we have a God whom we can depend upon in all our trials, regardless of what they may be. I am thankful for all our literature, including the Lesson-Sermons, and grateful to the faithful practitioners.

(Mrs.) ELIZA C. MOULTON, Weiser, Idaho.

4

About seven years ago, very shortly before a child was born I was suffering from a form of kidney disease called dangerous, accompanied by vomiting of an unusual type. I had planned to go to a maternity hospital near me, and when I was visiting there the doctor in charge became alarmed and insisted that I remain there for them to watch the case.

They offered me little encouragement and told me my life depended upon obeying their orders. I refused to remain,

.

and on reaching home became very ill. I was very weak, not having taken any solid food in months, and was not able to swallow a spoonful of water without intense suffering. I felt that I was dving when I called for a Christian Science practitioner and nurse that night. I was asked to choose my physician and was led to one who has the deepest respect for Christian Science. He said he found everything as the hospital had reported, but he would depend upon Christian Science to correct the troubles. It was presumed I had three weeks for treatment in Science before confinement. During the first days the nurse called the practitioner many times a day, saying, "Work immediately." In a few minutes I would be at peace, and the vomiting was gradually overcome. When I could take a cup of water in my hands and drink, I felt it was truly a cup of cold water in Christ's name. In a few days I let the nurse go and was about the house.

About ten days from the time I called the practitioner the child was born. My husband and I were alone. There was no delay and no pain. Doctor and nurse came immediately and both were rejoiced over the demonstration. I did not suffer from what is known as "after pains." The practitioner worked for me until all fear of them was destroyed. In calling up the hospital to tell them the child had been born at home they said, "You do not mean that the child is alive?" The child was very frail and only the truth applied could ever have corrected the discords which arose. Several times during the first week he seemed to be passing away, but soon became normal and is now larger and stronger than most of his companions, having never since had a serious illness. Difficulties of every nature, both for myself and my children, have been met through Christian Science, among them the effects of an accident, when a child fell quite thirty feet to the hard ground. This was met in a few minutes and no bad results or soreness followed. We had our tests during the influenza epidemic and the healing was rapid and complete. I was also healed of an internal weakness which doctors had failed to relieve at all, and which has never returned. It would fill a book to tell the benefits I have received. What we owe Mrs. Eddy is best expressed in her own words, in her Message to The Mother Church for 1900 (p. 2), where she says, "The song of Christian Science is, 'Work-workwork-watch and pray."

Mrs. George C. Putnam, Lodi, California.

4

One of the greatest blessings that has come to me through Christian Science, among an innumerable host of them, including many physical healings, has been the understanding that God's will is good and that only good can come to us from God,—that afflictions are neither sent nor permitted by Him and have no existence beyond false sense testimony. Having "endured a great fight of afflictions" before reaching that understanding, it may be helpful to some other student struggling under the same weight to know that it was through years of earnest seeking that I attained it.

Through weary months, while seeing the evidence of the love of God for others, the actual realization that it was for me too seemed hard to reach. With the ever patient, loving help of a practitioner, fears and erroneous beliefs have been destroyed; for as we read in Isaiah, "So shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it," and again in II Corinthians, "Now thanks be unto God, which always causeth us to triumph in Christ, and maketh manifest the savour of his knowledge by us in every place."

To a mental and physical wreck, health has been restored. Fear of living—fears of every kind—are vanishing through the understanding of Christian Science. The realization that God is ever present, that His will is good, and that He is the unfailing Principle of all reality, destroys every fear and erroneous belief and brings the "peace of God, which passeth all understanding." The immeasurable gratitude I feel is being expressed to the best of my ability in daily, hourly striving to live nearer the example set us by Christ Jesus.

(Mrs.) GRACE MARGARET WATTERSON, Windsor, Ohio.

4

I have decided to make a public answer to a question often asked me as to why I left the denominational church in which I was brought up. My answer is: Because when the responsibilities of a family came to me, religion, as I then knew it, failed to meet and solve the problems encountered in rearing a family. For five years I laid my Bible aside and had no desire to go to church; in fact I had no time to go, or to do anything other than the daily routine. At the end of those five years two of my neighbors had become interested in Christian Science and were holding services every Sunday morning across from my home. I asked in regard to their work and they told me it was a religion that healed sickness as well as sin and all other discordant conditions, and invited me to come over and hear them read the Lesson-Sermon. I accepted the invitation and later borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I was hungry and thirsty for something to meet and satisfy my needs. I read the Christian Science literature, bought a Quarterly and a copy of Science and Health, and began studying the Lesson-Sermons, and can truthfully say that the understanding Christian Science imparts is the living water; for it is the only thing that meets all human needs. About five years ago I was taken ill with typhoid fever in its worst form. With the little understanding I had of Christian Science and the loving help of a practitioner who came to me when I was almost at death's door I was beautifully healed. Since that healing I have been able, through the understanding I have gained, to meet and overcome nearly all ills for my children and myself, including croup, measles, scarlet fever, and influenza.

I am the mother of six children; the two eldest I fed on medicine from infancy until they were eight years old. Whenever I went to visit my mother I was always sure to pack one end of my suitcase with medicine, even if I had to leave out some clothes. But because of my understanding of Christian Science the four youngest have never taken medicine. I feel so thankful to-day when I think of the day I decided to try this blessed truth. I often wonder how mothers ever get along without Christian Science, for if I had not found it when I did I am sure I would never have been blessed with the peace and harmony in the home that we enjoy to-day.

I send this testimony hoping that it may reach some one who wants peace as I did when I found Christian Science, for it certainly meets every human need when rightly applied.

(Mrs.) DRUIE E. THOMPSON, Monticello, Arkansas.

٥

It has been more than three years since I first began the study of Christian Science, and I think it is time to tell others what it has done for me. I was healed of what is known as "Cuban itch." For nights I could not sleep and finally, after applying lotions for a month or two, I turned to a Christian Science practitioner for help. I cannot remember just when the healing took place, but the next

time I thought of it I found I had been healed. Since then I have been healed of hemorrhoids, colds, the fear of lack, and many physical diseases which I did not know the name of.

Before coming into Science I was always ill; now I am always well, and not only well but I am learning what real health is. I am learning that God is the source of health, of supply, that God is Life, and that, in proportion as we realize this, are true health, supply, and all needful things found. I thank God that I am daily learning to turn to the real, the spiritual, and away from the material with its ills and fears, and I am finding true peace and happiness. I have waited nearly two years to send this testimony, error having urged that I wait until I had something more important to tell about. But at last I realize that "ceasing to give, we cease to have," hence this testimony, and I hope it will be the means of helping some one to break the shackles of sin and sickness.

MRS. H. J. PAGEL, Minneapolis, Minnesota.

4

It is a wonderful thing after years of weakness, unrest, and struggle to find that God takes "no pleasure in the death of him that dieth," that it is not God who makes our hearts sad, and that we need never struggle in vain for health, joy, or prosperity. This wonderful thing has come to me through the study of Christian Science.

Like many another, I searched in my childhood for God. He seemed to be in the flowers and hills, but not with men. Never did I hear Him referred to as present, nor did His name enter into common conversation and daily action. I sought Him in Sunday school and church, but the ignoring of the command to heal and the power given to matter seemed illogical and inconsistent with the Bible. There was nothing that taught me how to pray the prayer that "availeth much." Later, when in the university, I sought the power of mind in the study of Plato, Aristotle, Kant, and Hegel; but the end of every course left man with doubtful immortality, and reason limited by time and decay. All this while I was battling against general weakness, overwhelming fatigue, sore throat, or some other ailment. I never felt well. Doctors told me repeatedly that I was working too hard, and that a breakdown was inevitable. Then my sister contracted tuberculosis of the lungs. Everything that medicine could offer was tried, but to no purpose. For her sake I began to study Christian Science. Another sister fell ill of the same disease. The two passed away within three months of each other. In the meantime my trouble had been diagnosed by two physicians, one a noted specialist, to be the same disease. I was told that it would be fatal for me to go back to work. A Christian Science practitioner told me that God is my Life. Clinging to this, I went back to work. Though often the sense testimony seemed terrifying, I never stopped working, and at last the belief of sickness was replaced by the fact of health, and I knew that I was well.

It is not for the physical ease that one is grateful. It is for the reversal of the sense testimony, the new birth of thinking in terms of ideas, not things. It is to find God as law and Principle in His own infinite Science of Mind, proved beyond shadow of doubt by the overcoming of so-called laws of matter in countless lesser ways that prove the inevitability of the complete demonstration. It is to find man, not as a feeble creature dependent on sleep, circumstance, matter, but as the idea of God, acknowledging only an infinite capacity. For this, I would sing to all the world my grati-

tude for Christian Science, humbly realizing that I understand only so much as I prove.

I am daily grateful for the Christian Science periodicals, which, together with our Leader's writings, help us to "keep that which is committed" to our trust.

ETHEL ADÈLE DENNY, San Francisco, California.

4

Having never sent in my testimony of healing through Christian Science I feel I should, as it may be the means of helping some one, as I am benefited by the testimonies of others. After suffering for years from a nervous stomach trouble, and having spent everything we could get in an effort for healing through materia medica, but without results. I one morning awakened to the fact that medicine could not help me. I got up, dressed, and went to a town not far distant from my own, to see a Christian Science practitioner. I stayed about forty-five minutes and came back on the next train, happy and healed. I could not then believe I was well, and continued treatment for two weeks. I have never taken a dose of medicine since, and instead of being a pale little woman, without any hope in life, I am now well and hearty and can do all kinds of work, while before the healing I could not do any, but just sat day after day in torture.

I love Christian Science and apply it to all my daily problems. I cannot express in words my appreciation for all the Christian Science literature. I have known about Christian Science for about twenty-eight years, and have had so many healings and so much good has come to me through it that to me it means everything. All praise to Mrs. Eddy, who through her discovery has saved so many from the invalid's chair and death, and has brought love, health, and happiness to desolate homes. We thank God for this priceless treasure, health.—Mrs. Willie Weems, Blytheville, Arkansas.

4

In "Science and Health with Key to the Scriptures" Mrs. Eddy says (p. 462), "The anatomy of Christian Science teaches when and how to probe the self-inflicted wounds of selfishness, malice, envy, and hate."

This statement was made practical to me in 1892 when I was healed of tumor. I was convalescing from a belief of nervous prostration; having been ill for some time and becoming weary of what the attending physician told me, I decided to call upon another one for treatment. This second one felt that a consultation was necessary, and to this I consented. When the consultation was over I was told that an operation was necessary, and at once, as there was great danger of death. I made all arrangements for it then and there, but on my return home my husband protested, and while I was deliberating as to what I should do in the matter, a friend called on me and told me of Christian Science. I had not heard of Christian Science before but I was eager to be healed, so seized upon the advice of my friend, consulted a practitioner, and in three weeks was completely healed. Through the work done for me the "self-inflicted wounds of selfishness" had been healed. This is only one of many demonstrations in our home.

The belief of sorrow and separation was met through the realization that God is ever present, and man, His idea, is ever conscious of this presence. I am so grateful to God for all these blessings, grateful to our revered Leader, Mary Baker Eddy, for bringing to a waiting world the truth that heals the sick and reforms the sinner, and I send this testimony in the hope that it will help some one as I have been helped by reading those of others in our periodicals.

(Mrs.) JENNIE HUNTER, Malden, Massachusetts.

Signs of the Times

I"One Alliance"—The Christian Science Monitor, Boston, U.S.A., Dec. 3, 1920]
In the year 1898, Mary Baker Eddy, with foresight and wisdom, gave to the world a poem which includes the following verse (Poems, p. 10):—

Brave Britain, blest America! Unite your battle-plan; Victorious, all who live it,— The love for God and man.

To him who seeks Truth, this admonition provides unerring metaphysical instruction. The direction is to unite the plan of battle. Every disciple of Christian Science knows that the only battle there ever could be is the battle of the Lord, by which the belief in evil that claims to be present as consciousness is overcome by the perception of Christ, Truth, as consciousness. This is the individual's cognition of the allness of Mind. The sense testimony of contending nations must be replaced by the understanding of omniactive Principle forever casting out that which is unlike itself. This operation of Principle which applies equally to individuals, groups of people, and to nations, will be interpreted by the student according to the degree of his enlightenment either in terms of personal sense, as people warring with one another, or as Truth destroying error.

By the specious argument of personality, suppositional evil would if it were possible separate those standing for Principle. If instead of contemplating rivals for place and power, the vigilant thinker would discern idea, the infinite manifestation of infinite Mind, there would be immediate and radical rejection of all that might cause dissension where peace and harmony are absolute. Mrs. Eddy's admonition to unite our battle plan is indeed pertinent, for the only unity that is possible of expression to man is his unity with God. The one and only alliance of infinity is exemplified in the doctrine of atonement. As the individual realizes his at-onement with Principle, God, he will find himself associated in his activities with those standing for Principle. Since it is sophistry to argue that the true idea can exist in consciousness unexpressed, alliance with Principle is inevitably manifest in the way of God's appointing.

Although the purpose of alliance is protection, the proper protection that should rightfully be experienced through alliance can only be attained by right knowing, that is, active thinking that accords with Principle. It is the certain knowledge of the truth that assures to man freedom, and this knowing the truth is the at-one-ment with Mind, the alliance with Principle, the stand for the right, that is all the defense that is possible or needful to men. If one is doing God's bidding, he is found fighting on the side of Principle in the rejection of error. This righteous zeal is his complete protection and sure reward.

Any failure to uphold the highest and best in world affairs results from the lack of the understanding of Principle. This seeming reversal of thinking in alliance with Principle is vividly exemplified in the portrayal of Macbeth, who, accepting the accumulating suggestions of evil as they appear, first in mild then in more sinister form, finally places himself so in league with evil that in the testing time he has no support from Principle, the one sure ally. Macbeth's assumed power is based on faith in mesmeric suggestion, which, when confronted with the truth, allows him to be overwhelmed by the multitude of iniquitous thoughts he has made his allies.

If fear is the motive for seeking an alliance with nations or people, the alliance has not within itself the elements of success, whereas, if the alliance results from people and nations together seeking Principle, then is the alliance the outcome of an understanding of Principle that insures permanency. National and personal aspirations tend to separate, but the aspiration to reflect God, good, which is the one true aspiration, unites all in a common aim and brotherhood. The man who is habitually looking for the knot in the bulrush may aver that personality and national self-interest are necessary concomitants of present living, that the millennium is yet afar off, but in Christian Science it is provably true that if one is consciously allied to Principle, this will bring to his support whatever is necessary for the harmonious working out of any problem. Each agency for good appears allied to every other agency for good because all are in reality allied to Principle, Immanuel or God with us, which, according to the law of harmony, is, in Christian Science, interpreted as whatever contributes to the general and individual welfare. As Mrs. Eddy beautifully says on page 129 of "The First Church of Christ, Scientist, and Miscellany": "And how is man, seen through the lens of Spirit, enlarged, and how counterpoised his origin from dust, and how he presses to his original, never severed from Spirit! O ye who leap disdainfully from this rock of ages, return and plant thy steps in Christ, Truth, 'the stone which the builders rejected'! Then will angels administer grace, do thy errands, and be thy dearest allies."

It is so easy to yield entrance to the personal equation, to agree with other people and see an issue from the popular viewpoint instead of undeviatingly seeking the viewpoint of Principle. This conscious looking at questions with God, that is from the standpoint of Principle, requires great humility and abnegation of the human self, for to the extent that human will or desire clouds the vision, to that degree is the perception of the Christ-idea in its purity dimmed.

It is when found fighting against God that one loses. Asa discovered this many years ago when the Spirit of God, speaking through his messenger, said to Asa: "The Lord is with you, while ye be with him; and if ye seek him, he will be found of you; but if ye forsake him, he will forsake you." The only way of insuring success to one's endeavors is alertly to discern and follow God's will, for the law of God, which is the law of the unfoldment of right, is inevitable and governs the universe and man. Because Truth is always victorious, if error ever seems to hold the field it is simply because one has not united with God in his battle plan.

The glorious promise contained in the quoted stanza from "The United States to Great Britain" is that those who love Principle and idea will ever be victorious over sin, disease, and death. Loving spiritually frees from the entangling alliances of the flesh, for as Mrs. Eddy writes on page 105 of "Miscellaneous Writings," "Christian Science is an everlasting victor, and vanquishment is unknown to the omnipresent Truth."

[From "An Institute of English," by Robert Donald, LL.D., in The Landmark, the Monthly Magazine of the English-speaking Union]

It is estimated that more than two hundred million people now speak English, and not more than half that number is of British- and English-speaking Celtic origin. People of other races absorbed by English-speaking countries soon lose their mother tongue, and become the inheritors of a literature, law, and institutions which were foreign to their ancestors. English has long been the language of the sea; it is becoming more and more the language of commerce, and it looks as if it were destined to be the language of the League of Nations. . . .

The suggestion which I made at the University of

Toronto was that the universities in English-speaking lands should follow the example of newspapers in the British Empire and call a conference to discuss the future of the language, with the object of organizing an English Institute on the lines of the French Academy. . . . Apart from the direct labors of an Institute of English, which would be of immense benefit, we cannot overlook the influences which such an organization, embracing the whole English-speaking world and removed from the remotest connection with politics or controversial subjects, would exercise in promoting better understanding and closer community of interests among all people who use the English language.

.

[From a Letter of Reverend F. O. Seamans in Manufacturers Record]

The serious and friendly attitude taken by some of our leading secular journals toward moral and religious questions seems to me one of the hopeful signs of the time.

٠

[One of a series of little stories running in *The Standard Union* of Brooklyn, New York, each one of which contains an authentic decision on some point of law of interest to women]

Betty and Anne were having dinner in a restaurant, and relaxing after a hard day of shopping. When they had been refreshed by a warm dinner, the active mind of Betty began to work.

"I went to a Christian Science testimony meeting the other night," she told Anne. "It was very interesting indeed. More than a dozen people got up and related some personal incident of healing. You know they claim they can cure all manner of ills without medicine, merely by praying."

"Is that so? Well, let me tell you, Betty, when I am honestly sick give me a good doctor, a strong dose of medicine, and a pretty boudoir cap."

"I wonder," mused Betty, "whether it is legal for them to practice without a license?"

"But," reminded Anne, "they are not really practicing medicine, they simply use prayer as a healing."

"I wonder where we could find out?" continued Betty. "Surely there must be some legal decision about the matter."

"There is, indeed," came unexpectedly from a deep, pleasant voice. Betty and Anne were both startled, and glanced up quickly. They saw a tall, distinguished looking man whose eyes twinkled with just a bit of amusement as he spoke.

"I could not help overhearing your conversation as I sat at the next table. Queerly enough I recently had a case which answers your question. You see," he explained, "I am a lawyer."

"Oh, isn't that fortunate," exclaimed Betty. "It is very kind of you to bother. Please do tell us."

"There is a public health law," the lawyer continued, "which provides that none can practice medicine without a license, but further provides that this shall not apply to the tenets of any church. The Constitution gives the right of free religious beliefs to every individual. The case I handled dealt with a Christian Science healer who was accused of practicing medicine without a license. I proved, in court, that he had made no diagnosis of the case in question, and that he had not prescribed any medicine. His treatment consisted wholly of prayer, in accordance with the rules of the Christian Science church. The judge held that this was not a violation of the law and that the man was not practicing medicine without a license. As long as he prescribed no medicine, but sought to cure solely by prayer, he came within the exemption of the public health law, which states that its provisions shall not apply to the tenets of any church. Is it clear to you now?"

"Oh yes, indeed," said Betty gratefully. "I cannot tell you how much we appreciate the information you gave us. You have saved us a great deal of trouble. You see we make it a point to find out about any law which comes to our attention, because we feel it is the duty of every citizen to know as much of the laws of his state as is possible."

[From a News Item in Ontario (California) Report]

This denomination [Christian Science] is founded wholly upon the Bible, taking the spiritual interpretation as discovered by Mary Baker Eddy, which is found provably true, hence scientific. Christian Scientists do not proselyte, but through the testimonies of healing, given each Wednesday evening, many are being brought to use the healing power of the Christ, which, to-day as of old, destroys sickness as well as sin.

["The Verdict without Evidence"—An Editorial from The Salt Lake
(Utah) Telegram]

The district attorney of Los Angeles County, California, acts hastily and without sound reasoning in making a vicious and unwarranted assault upon Christian Scientists and other nonmedical healers. He promises prosecutions on manslaughter charges for the parents of children who may die while under the care of nonmedical practitioners, holding parents who fail to call physicians criminally negligent. The Los Angeles attorney is blustering and blundering in where angels fear to tread. Few parents sacrifice their children on the altars of narrow-minded philosophy. The history of the world records indelibly the fact that the parent is the greatest and the nearest protector of the child. No parent, whether he believe in mental healing or in the use of medicine, will subject the child to unnecessary risks in its battle for life. Instinct teaches the parent to fight for its young, even though the struggle demand self-sacrifice. How silly it is for an official to profess greater love than this in behalf of the state!

If the reasoning of the district attorney is sound and the state is justified in making an official investigation of child deaths occurring under nonmedical healers, then is not the state in duty bound to take the same interest in deaths occurring under the school of medicine, for failure to resort to some other school in the effort to render all possible service to the child? While it is true that the preponderance of the American people place their faith in medicine and surgery, it is also true that there are many who place their faith elsewhere.

No one school is infallible. Marvelous cures have been effected by all of them. Often these cures have come when competing schools offered no hope. Schools of healing must consider themselves in the service of humanity rather than in competition with each other. In the meantime there is no need for attorneys, skilled in the knowledge of the law, to pass upon questions on which they can offer no expert testimony. The Los Angeles attorney displays a bias which not only ill becomes the public official, but also reveals mental barriers in a profession which should ever keep its gates open and hear the evidence before passing judgment.

["The Censor and the Movie 'Menace' "—by Ellis Paxson Oberholtzer in The North American Review]

That there exists a deep-seated feeling unfavorable to the film, unless it shall have first passed through the hands of competent officers whose duty it is to inspect it and see what it contains, is undoubted. The declarations of large numbers of secular organizations dedicated to the cause of social betterment, as well as that of many religious and semi-religious bodies, are proofs that the manufacturer who, for his profit,

will pander to the people's lowest tastes, will not for very long go forward uncontrolled. The rules which the film censor of Great Britain enforces, those which must be heeded in Quebec, Ontario, and in all the provinces of Canada, in Australia, and in Japan, in Pennsylvania, Chicago, and several other states and cities in this country, are founded upon a conviction that there are common public rights which must be guarded as this great new industry proceeds on its victorious course. The fact that there were bills proposing boards of review before the legislatures of some twenty-five or thirty states last year, and that these proposals will reappear in the same legislatures next year, and thereafter, if necessary, until they are enacted into law, further confirms the observant man, whether he be in or out of the industry, in the knowledge that in the belief of those who, guided by a conscientious purpose, usually cause their beliefs to prevail in the end, there is a "menace" which calls for community action at once. . . .

We censor our own thoughts before we utter them, if we are esteemed as neighbors and citizens. This essay will be reviewed and censored before it shall come forth in print. The book, the magazine, the journal, the advertisement are edited. Precisely this function is performed by an officer who surveys the motion picture. He edits the film before it is presented to the public view. That he acts for the state instead of some other interest cannot alter the form of the service which he performs.

[Medical Inquisition a Form of Tyranny]

In a recent editorial entitled "The New Inquisition," the London Times, dealing with certain measures instituted by the British Ministry of Health, makes the following statement:—

"Of all forms of tyranny, a medical inquisition is the worst, since it leads inevitably to attempts to force upon sick men and women routine methods of treatment which may be extremely distasteful to them. The personal factor drops out of sight. Yet these vaunted methods are often but a fashion of the hour, and will, perhaps, be abandoned within a year or two."

[From "College and Commonwealth," by John Henry MacCracken]

Do we Americans generally prize very highly the knowledge which the college curriculum purports to impart? Do we not rather all agree that the majority of college students do not know five years after graduation what they gave sufficient evidence of knowing to pass the college examinations? Is there any society or set or group to whom preeminence is generally accorded, in which betrayal of ignorance in any sphere causes loss of caste as a breach of etiquette does in a social club? On the contrary, is it not the mark of membership in the most exclusive scientific circles to disclaim the possession of knowledge, or even of a natural curiosity in any except a very limited field? Is it not the fashion to say, "I remember nothing of what I learned at college, but the impress of this or that man will never leave me"? But why buy comradeship at so high a price as that paid in the arduous path of learning? Why not the country club, with good fellowship in hotly contested sports and more leisurely golf contests?

Was Tholuck right when he said, "My most important work is my walks with individual boys, not my lectures in the class room"? Why not, then, dissolve the university again into peripatetic sophists? . . . The mere transmission of the world's knowledge is of more significance than we realize in this day of the printing press. So strongly do I believe that

it is the function of the college to teach, that, if the knowledge imparted is not worth remembering, I would replace it in the curriculum with something that is worth while. . . . If the knowledge imparted is so strongly tinged with the personality of the teacher and so little a part of what should be expected of the educated citizen of the world that it cannot be tested in a comprehensive examination by some one other than the instructor, then is the knowledge indeed of little worth. There is no commonwealth in America to-day which does not need exact knowledge, and this is true of all ranks of society. It is true of the mechanic no less than of the man who makes our laws in the legislature. It is above all true of the leaders of public thought and opinion, whether we want to make a new tariff or devise a new currency law. With the increasing complexity of our civilization it is almost impossible for the commonwealth to find men who can really see the commonwealth as a whole or whose minds are sufficiently disciplined not to have their vision distorted by personal preference or passion. The first duty of the college is to teach, because that is its peculiar duty, because it is a school and systematic teaching its chief object.

[From The Congregationalist and Advance]

A judgment is an expressed opinion. It is also a test of our good will. Do we really love our neighbor as ourself? Or do we only pretend? For the claim of duty goes back far beyond the spoken to the unspoken judgment. Have we any right, even in our own thought, to make a settled estimate of our neighbor—as if he were always going to be as we seem to find him now, and as if we were judge and jury in the final assize? Such declaration of finality in our judgment is a presumptuous thing. It contradicts the law of love. It reveals us as unloving and fixes our own status rather than that of the other.

[From The Outlook, New York City, New York]

The actor was speaking: "I had a great fear the other night. I went on the stage and began thinking of my line beyond the immediate line, and for the life of me I could not remember it." . . . Every one of us makes the mistake of worrying about a to-morrow which, when it comes, is no more filled with terror than to-day. Our training has been for this hour. The human mind cannot encompass that which does not exist. You might as well bother over next spring's daffodils as to weep over to-morrow morning's weather. Oh, the hurdles we needlessly jump! There were those dark pessimists who prophesied that the recent world war would go on for thirty years. . . . My ideas day after to-morrow will not be those of this morning, so why waste my energies in a sad appraisal of a self that will be changed perhaps within the space of twenty-four hours? One thing at a time-and happiness.

[Charles Stelzle, in The Survey]

While the Pilgrims were intensely interested in the civic and political welfare of the people, they were not satisfied with purely secular solutions of the social problems of their time. They applied the [standards] of religion and "the kingdom" to industrial problems, to social situations, and to international affairs. Their individual consciences were reinforced by a social conscience which found its expression in law—and this law was founded upon religion, as they conceived it. In this respect they again anticipated the best statesmen of to-day. We are coming more and more to recognize the necessity for the moral element in social work, in economic discussion, and in national legislation. We are not

E.R.

so sure, now, that religion and politics can safely be kept in separate compartments—that religion and politics have nothing in common. We are learning that the labor question is a moral issue, and that it can never be settled upon any other basis. Labor leaders are coming to recognize it. History is demonstrating it. The very social reform measures that are being presented to us as a solution demand it. . . .

The attitude of the Pilgrims toward their own problems was determined by the teachings of the Bible, which was the sole guide in all their affairs. They regarded the Bible as the direct revelation of the will of God to them as individuals. Every question that arose among them was "discussed, disputed, and cleared up by the word of God," and it was not considered settled until it was found "agreeable to the Holy Scriptures." Public officials were selected according to the directions given in the Bible, the qualities there demanded being set up as the standard for all officeholders. The Bible became to the Pilgrims a system of practical ethics and right conduct.

Probably most of us would accept the statement that the Bible contains the fundamental philosophy and law which makes for a better citizenship and a higher national life; we simply have forgotten or neglected this truth. It is worth while, in discussing the facts regarding the Pilgrims during these tercentenary anniversary days, to recall to our minds what it was that made the Pilgrims great. The Bible was undoubtedly the chief factor in their development.

[From The Universalist Leader]

In these times when many . . . indulge in erratic notions regarding the present deplorable condition of religion, and are harking back to the "good old times," it is good to have a smashing iconoclast get after some of these notions. A professor of the Carnegie Institution in a recent lecture, the outcome of wide study, points out the fact that these are not degenerate days, there is just as much and just as good religion operating in the world to-day as ever in the past, and operating under far more favorable conditions of freedom of mind and scientific method. He shows how in the old days the high church official was an autocrat; he was the whole thing; he commanded and others obeyed. That is, there was one man thinking where now there are thousands, and if we slip by some of the forms and dogmas, once so essential, the elemental religious impulse is controlling and directing humanity along the pathway of human progress.

[Introduction to a Christian Science Lecture in Sacramento, California]

A few years ago the thinking world was greatly troubled by the so-called warfare between science and religion. As a reaction against theological dogmas of earlier days, a wave of materialism had come, which sought to overthrow in the name of scientific investigation the cherished religious faith of mankind. We were asked to contemplate not man created in the image and likeness of God but a man evolved from protoplasm, developed through various stages of apehood into a human being who showed himself fitted to survive by crushing out those weaker than himself. Under the influence of this teaching many sank into indifference as to religion, and many into atheism.

But to some, though disturbed by the conflicting evidence, came a spiritual prompting that this was not the truth about man. Some pure influence had left an impress which materialistic logic could not efface. An unerring intuition prophesied the dawn of a light that should lighten the darkness and restore to man his faith in God. This light has come in the

discovery by a New England woman, Mary Baker Eddy, of Christian Science, which reconciles science and religion by relegating the ape-man to the realm of human belief and enthroning God's reflection, the good man, as the only real man, and supplying abundant proof. Thus all true science is a knowledge of God and His creation and is religion.

[From The San Francisco (California) Examiner]

Score another for the Bible. Told seriously to consider from which subject they could gain the better knowledge, Shakespeare or the Bible, a class of one hundred and forty-six upper students in English at the University of California voted ninety-five to fifty-one in favor of the Bible. As the result, a course in the holy Book will replace the usual Shakespeare class for these students next semester.

[A Practical Application of the Golden Rule in Business]

In a recent article in the Boston Evening Transcript reference is made to a news item which told that the five hundred employees of a manufacturing concern in an Ohio city, which is operated on the Golden Rule basis, had decided to surrender their jobs voluntarily for a month in order to give work to the unemployed of other clothing factories. The president of this company is quoted at some length describing their plan and its results, and the following is part of what he is quoted as saying:—

"The Golden Rule is the divine law governing human relationships, accepted by all religions and proclaimed by all prophets and teachers of every creed. It is the only infallible, workable, industrial, and economic law in the universe to-day. When I discovered that God had given as infallible a law governing human relationships as the law of gravitation, and decided to make conditions favorable for that law's operation, I began to study the conditions in our industry. I discovered that practically ever since Eve sewed fig leaves together the textile and clothing industry was the poorest paid industry in the world. I called my help together about the end of 1918 and told them of these conditions, and that we expected to make the Golden Rule the governing law of our industry, and that together we would lift ourselves out of that condition. I do not say it has solved all labor troubles in our factory; nay, it has done more, it has eliminated all labor troubles during the most trying industrial period of the world's history. I do not say it has driven out hatred, strife, and selfishness; it has done more, it has ushered in love, contentment, cooperation, and happiness; it has not only cast out hell, but has brought heaven to us.

"During the year of strikes this company had no strikes. During the year of nonproduction the company increased their production over one thousand per cent. During the year of high prices the company manufactured to order suits and overcoats to retail at from \$16.50 to \$29. During the year we moved to a building previously occupied as a distillery. When we took our inventory at the end of 1919 we found that in spite of increases in wages and the enormous expense of moving and setting up our entire plant, we had made a net profit of \$42,000 on an investment of \$60,000. The actual condition at that time was that we were paying bigger wages, selling our product for less money, and making a bigger profit than any of our associates in business.

"When we decided to make the Golden Rule our governing law it was impressed upon every mind that doing to others as we would be done by did not simply mean employer and employee, but meant each customer on our books as well; it meant that every garment we sold must be of a standard that we would be willing to accept, and sold at a price that we would be willing to pay if we were in the customer's place; it meant that our help saw behind each order a fellow human being whom they wanted to deal with as they would want to be dealt with. It was an honest effort at applying the Golden Rule that fixed our prices during the 1919 orgy of high prices and profiteering. No, friends, this is not a miracle, except in the sense that acting in harmony with God's law always produces miracles. Every one of you will know, when I tell you what we did, that there could have been no other result."

[Clay MacCauley, D.D., in The Christian Register]

The "gods" who are worshiped by the Japanese are, with few exceptions, but apotheosized men and women myriad in number . . . but I am sure that, though this people, as such, are not yet theistic, there is slowly growing and widening among them some apprehension of what Christians mean when they speak of God. Many years of a theistic mission, preaching and publishing, and a constantly increasing reading and study of the philosophic, scientific, historical, and religious literature that has come from the world at large into Japan's general process of education and culture, have given to many thoughtful Japanese some measure of theistic intuition and faith.

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account,

the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

* * * Announcements

From The Christian Science Publishing Society

New Morocco Bound Vest Pocket Edition of the Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing," "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following articles reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading

room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

+ + +

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Letters of Appreciation

Year, E.

order, b

Si

te In

ė ir

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

AM so very grateful for The Christian Science Monitor that I want to express something of its value. A free-time table is maintained by a large elementary infant school of over three hundred children. This has been rendered possible by the use of The Christian Science Monitor. The stories from the Children's Page are read or told to the children day by day, and it is because these stories are so well written and contain such worthy information that each teacher has expressed her appreciation. I mention the following as some of the views:—

- (1) The stories are seasonal and so become a sort of pivot for most of the lessons; this fact in itself makes a free-time table possible.
- (2) They give information about commonplace things in an interesting way that attracts the attention of the little ones.
- (3) They are so well and simply written that the children can read and understand them for themselves.
- (4) The information is such that there is no need to delete portions, as is so often necessary with other stories.
- (5) Stories for geography and history lessons, stories of children, animals, birds, flowers, and ordinary objects are so interesting in character that they are equally appreciated.
- (6) The poetry, rhymes, and games are splendid, and the pictures themselves give great joy.

Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

German Translation. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Scntinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism. Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German.

Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message of sermon written for the dedicatory service of The Mother Church, January 6, 1805, and scintillations from the press of that occasion. Library edition, cloch, 90 pages, single copy \$1.00; six or more, each 75 cents.

Ruclimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

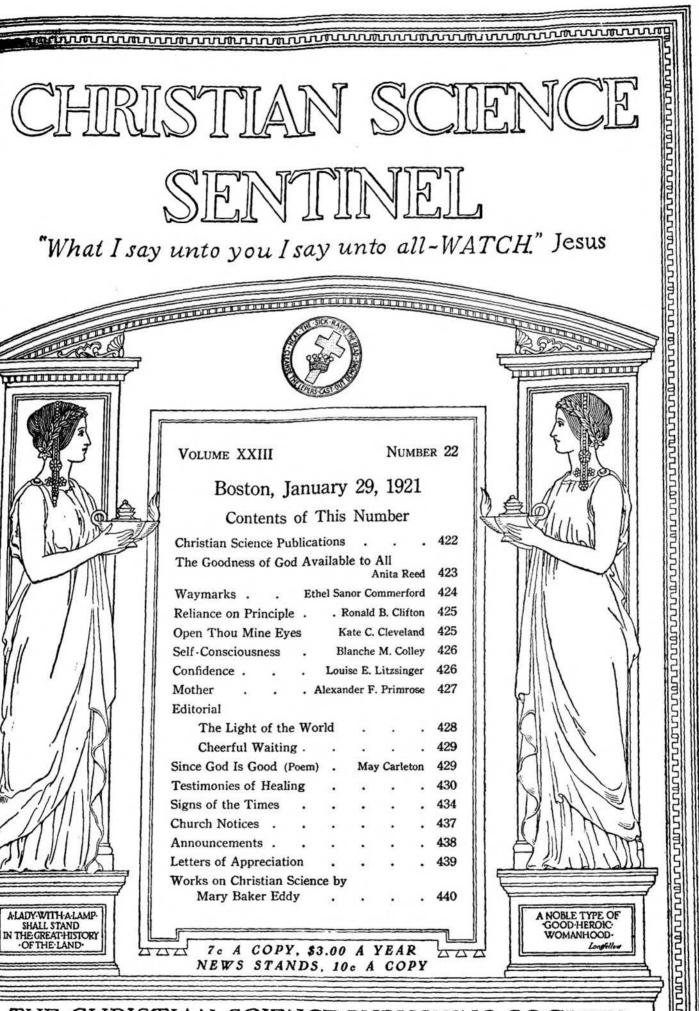

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

CHRISTIAN SCIENCE: ITS LEGAL STATUS—By Judge Clifford P. Smith. Paper, 15 cents.

LAW AND WORK for the blind. Printed in New York point, American Braille or English Braille, \$1.00.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission have been set to music as follows:

"The Mother's Evening Prayer," 75 cents.

"Christ, My Refuge," 75 cents.
"Love," 50 cents.

Communion Hymn-"Saw Ye My Saviour?" (Johnson), 50 cents.

"Blest Christmas Morn," 37 cents "O'er Waiting Harpstrings of the Mind," 37 cents.

"Shepherd, Show Me How to Go," 37 cents, "Saw Ye my Saviour?" (Root), 37 cents.

The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, \$1.15; half morocco, \$1.40; full morocco, \$4.50; levant, \$5.50; pocket edition, size 45kx636, \$3.50.

PHOTOGRAVURE OF MRS. EDDV, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, 8-inch (mount 12x16), \$1: 12-inch (mount 15x20), \$2; 16-inch (mount 21x29), \$3.50.

(mount 15x20), \$2; 16 inch (mount 21x29), \$3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUB-LISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18x24 inches, \$5; on India paper without remarque, \$3.50. Smaller reproduction, size 11x14 inches, on Japanese vellum, \$1.25. Photogravure postcards of the Church Edifice and Publishing House, 5 cents.

Clarendon Brevier, heavy-faced, dis RIBLES. 01483x. tinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.50.

01440x. Brevier, light-faced type, self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.25.

01683x. Large type Bible, 1034x8 inches, bound in Alaska seal. Specially adapted for use of second readers, \$16.50.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents.

Price List of Bible Concordances and Dictionaries of the English Language supplied on request.

Items such as leather covers for the QUARTERLY, and case;, either closed or open, for books, Sunday school supplies and other accessories, will be found in the current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

NUMBER 22

The Goodness of God Available to All

SOMETIMES, perhaps, students of Christian Science are apt to make too much distinction between Christian Scientists and those who are not Christian Scientists. There is a distinction of course, for Christian Science has brought to this age an understanding of the words and the works of Jesus that no other religion has done, and therefore a student of Christian Science has a tremendous privilege in that he has the opportunity to learn and understand about God and man in a clearer and more practical way than those of other religions. At the same time it is well to be alert and watchful in case one is tempted to make the wrong kind of distinction.

Perhaps we know of some one who is in great need of Christian Science but we do not like to approach him on the subject for fear that he will not understand. Then again, we might know some one else who is beginning to learn about this new-old teaching of Truth and Love but we think he knows so very little that anything we might say on the subject would be beyond him and he might not understand, and so withhold from him the very words which might encourage and help. Possibly we keep away from some of our friends because they are not Christian Scientists-because we think it would be difficult to demonstrate Christian Science "in that atmosphere." And so, perhaps without realizing it, we might go on separating our friends from Christian Sciencefrom that which rightfully belongs to them-the knowledge and understanding of God, forgetting that there is no place where God is not.

And what about that friend who needs healing? Why should we be afraid to tell him what we know about God? The truth in Christian Science is for every one; divine Love is right here for all who need and are ready for it. They have only to reach out for it, for it is here all the time. Then what about that friend who is just beginning to learn of the wonders of God's love? Do we dare try to limit intelligence? Eternal understanding is manifested every moment, for them as well as for ourselves, so that it would be foolish for us to hold back our little handful from them.

There was a great gulf between Jesus and the people of his time, and yet we cannot imagine for a moment that he would limit any one who came to him for healing or teaching. His whole earthly mission was spent in bridging that gulf, not by going down to their level by any means, but by ever lifting up their thoughts to the Christ-idea which he so perfectly manifested. The separation or division he did make was between good and evil, and that he did vehemently. There is an enormous difference between the right kind of separation and the wrong kind which is limitation.

In the world are many people who love good, and it is in just that very love that they can unite to learn more of God; and this unity can be demonstrated at all times—sometimes silently but with understanding, with loving and courteous acts, by a smile or a word of encouragement, that may seem small to some but to others count for much.

Mrs. Eddy, like Jesus, spent all her time in teaching and demonstrating divine Love, and proving its availability to all. On page 9 of "Christian Science versus Pantheism" she says: "Whoever demonstrates the highest humanity,-longsuffering, self-surrender, and spiritual endeavor to bless ought to be aided, not hindered, in his holy mission. I would kiss the feet of such a messenger, for to help such a one is to help one's self. The demonstration of Christianity blesses all mankind. It loves one's neighbor as one's self; it loves its enemies—and this love benefits its enemies (though they believe it not), and rewards its possessor; for, 'If ye love them which love you, what reward have ye?" One of the greatest gifts Mrs. Eddy has given to the world is The Christian Science Monitor, and she did not give this to the Christian Science movement and to Christian Scientists only; she gave it to all mankind.

Not only is the goodness of God available to all people, it is available all the time; but because one may call himself a Christian Scientist and say that divine Love will supply his every need, it does not follow that he knows enough to avail himself of the good which will flow to him in an uninterrupted stream. No, each has his part to do, and until we can literally reflect and demonstrate Love, we can scarcely expect divine Love to meet our needs. We can only receive just that amount of good which we reflect and express. How important it is then to progress and grow in understanding.

The Principle that is God never ceases to operate; ever in action, it is quite undisturbed and unaffected by the ups and downs of mortal mind, and it is for each one of us, through ceaseless prayer and watching, to keep our thoughts so clear that we are always to be found in harmony with Principle. Every uplifting experience we have had has proved that, while we are in line with good, nothing but good can come to us; and it must necessarily follow that, so long as we keep our thoughts in accord with Principle, we are bound to be guided in everything we do. An earnest prayer for help and guidance, or an honest desire to learn more about God, has led many a struggling one to Christian Science; for the longing for good can never remain unanswered, and that longing could not be answered in any better way than through Christian Science. The Christ must unite the world in a better understanding of the eternity, the universality, and the indestructibility of good, God.

How are we going to avail ourselves of this goodness? This is a question that Christian Science is answering daily and hourly as humanity, through its study, is learning to lose the false sense of pleasure and pain in matter and to gain a fuller understanding of the reality of God and man. To avail ourselves of good, the all-power and all-presence of God, we have a big battle to fight, a battle against the carnal mind, whose one object is to destroy good. Ease in matter, faultfinding, the desire for applause and admiration, pride of position—these are but a few of the phases of the carnal mind which we have to fight, with the full understanding of good, God, as truly present.

Waymarks

ETHEL SANOR COMMERFORD

EVERY error confronting one is but a glorious opportunity of proving God's allness,—the omnipresence of infinite good. If the error be lack, the opportunity is present in which to prove the bounty of Spirit forever at hand; if sickness, the presence of the vigorous, energizing activity of Mind, the indestructible unity of Principle and its idea, sustained, protected, instantly radiating the health of the one perfect creator; if misunderstanding between brethren, the presence of the all-knowing, all-loving intelligence, which is man's true consciousness here and now, in which no misunderstanding could possibly exist. So one could go on indefinitely; for every inharmonious condition which presents itself as consciousness, a mortal creation, or a material universe, is simply a misconception or reversal of the one spiritual, harmonious universe of God's creating, forever expressed. The one spiritual universe operating in accord with the law of the one infinite intelligence is all the universe there is. The fact or truth of all creation is all the presence there is.

The fact in place of any discordant condition or circumstance can be proved by any one who will reverse the evidence of the senses and will claim that even where the wrong condition seems to be, the spiritual idea is forever and continuously operating according to the law of Spirit. On page 313 of "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Jesus proved by his absolute knowledge of spiritual fact, refusing to accept a discordant condition of any kind, no matter what the appearance might claim to be, that he was, as Mrs. Eddy states, "the most scientific man that ever trod the globe."

As Christians we are admonished to follow Jesus' example and prove by healing works that we are scientific men and women. Jesus knew immediately that right where mortal mind declared absence of Life, absence of sight, lack of food, discord of body or mind, right there present was the real spiritual man manifesting all of God's attributes. He demonstrated his knowledge of this truth by instantly healing every discordant condition that presented itself to him.

When called to the tomb of Lazarus, not for one instant did he believe the false evidence of the senses. He knew that God's man was all that was ever present, infinitely active, manifesting right then and there all the consciousness there was or ever could be. Lifting up his eyes to heaven, harmonious being, he said: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." What happened? Lazarus came forth from the tomb, the belief of limited life, and Jesus said: "Loose him, and let him go,"—rise from your wrong concept of creation and acknowledge the spiritual man of Spirit's creation, continually expressing all the life there is or ever can be.

Called upon to heal the man born blind, Jesus knew that no such condition could ever exist. When asked "Who did sin, this man, or his parents," his answer lifted from man the disheartening belief that man could suffer from hereditary conditions. Man could no more be deprived of eyesight than he could cease to exist. The very fact that the man was conscious, knew that he existed, was evidence of the eternal fact that he could be conscious instantly of the wholeness of his being, expressing "all the fulness of

the Godhead bodily." This spiritual understanding of man's unity with his divine source replaced the false belief with the true. The man went his way rejoicing in a fuller understanding of his divine birthright, a present realization of God's goodness.

When confronted by the hungry multitude, with only five loaves and two fishes with which to feed them, Jesus knew that if a man could be conscious of five loaves and two fishes, this ability to be conscious of something simply pointed to man's God-given ability to become conscious immediately of unlimited supply. All being infinite Mind and its infinite idea, how could there be a limited sense of anything? Jesus' scientific understanding of spiritual law enabled him to demonstrate right then and there, by feeding the multitude, that this law never ceases to operate, blessing man with an ever present bounty of good, meeting his every need. His spiritual senses ever awake to God's command, "Prove me now herewith," opened windows of heaven; a blessing was poured out, and there was not room enough to receive it.

This scientific work of reversing a belief of finite consciousness for the one infinite consciousness in which all there is eternally exists as Principle and idea, is elucidated on page 267 of Science and Health, under the marginal note, "Waymarks to eternal Truth." There Mrs. Eddy says: "When examined in the light of divine Science, mortals present more than is detected upon the surface, since inverted thoughts and erroneous beliefs must be counterfeits of Truth. Thought is borrowed from a higher source than matter, and by reversal, errors serve as waymarks to the one Mind, in which all error disappears in celestial Truth."

The practicality of the above statement was experienced by a student of Christian Science in the instantaneous healing of sorrow. The student believed that her suffering was very great and so did many of her friends. She was prevailed upon to ask for help from a Christian Science practitioner, which she consented to do. Upon her arrival at the practitioner's office, she was met by a face radiant with happiness and was greeted with a cheery "Good morning." He then asked her if he might be excused a few minutes while he read some letters. Almost instantly the student began to feel happy. When the practitioner asked her to tell him what the trouble was, it had vanished as the mist before the morning sunshine and she had to confess that she had no trouble. Her consciousness was filled with joy and happiness.

The practitioner's understanding of man's at-one-ment with God, conscious only of that which is true, prepares him with the sword of Spirit to reverse instantly the false belief that is claiming to be conscious, with true consciousness, the presence of joy. The scientific process was not understood at the time, but this experience of healing gave the desire to understand how this immediate result is attained. Sorrow claims to be the opposite of joy, the reversal of happiness. Joy, expressing all there is, has all power, all law, all intelligence, instantly supporting it. Sorrow having no law or intelligence to support it, has no power and is never present; hence joy is ever present.

This spiritually scientific work is based absolutely upon divine law. The practical application of this law replaces the false belief with the divine idea, the perfection of all that God has created. This divine law never ceases to operate, but brings to light man's coexistence with God, divine Principle, forever present and always available. On page 11 of "Unity of Good" Mrs. Eddy writes: "Jesus required

of mortal mind.

ye say, There are yet four months, and then cometh the harvest, I say, Look up, not down, for your fields are already white for the harvest; and gather the harvest by mental, not material processes."

> Reliance on Principle RONALD B. CLIFTON

neither cycles of time nor thought in order to mature fitness

for perfection and its possibilities. He said that the king-

dom of heaven is here, and is included in Mind; that while

ALL of us, at some time in our experience, are confronted with the belief that we have been wronged in a social, business, or political way,-that we have been unjustly treated. The industrial unrest which has been felt throughout the world is largely due to this feeling of injustice. It is of the greatest importance that every one of us should guard his thoughts carefully, so that no error be allowed to creep into our experience, in our home, or in our church. When we discover that we are harboring a sense of having been wronged, if we search our thoughts earnestly we shall find that this belief is caused by self-righteousness, self-justification, or stubborn will, none of which has any place in God's creation. On page 242 of Science and Health Mrs. Eddy writes, "In patient obedience to a patient God, let us labor to dissolve with the universal solvent of Love the adamant of error,-self-will, self-justification, and self-love,-which

wars against spirituality and is the law of sin and death." Human will is only the absence of a true understanding of Love and can never heal any discord. If we would ask ourselves this question: "What would Christ Jesus do if he were in my place?" when we meet seeming discord, and then do as we conscientiously believe he would have done, divine Love will solve our problem. When we think an injustice has been done us, however, if we make a reality of the supposed grievance, taking comfort in the sympathy error is always ready to offer error, we only fasten the belief on ourselves more firmly. Hence, Christian Science teaches us to rely, not on human policy or personal opinion, but on

Does the mariner, who in peaceful weather sails his ship in accordance with definite nautical science, disregard his knowledge when he meets with a stormy sea? Because the waves roll high, does he decide to forsake his chart and trust to his sense of right or wrong? If he did, he would not get very far. On the contrary, in peace or storm, he sails his ship according to a definite rule, knowing this to be the surest way to port. So in the problems of everyday life, Christian Scientists are taught to rely absolutely on God.

As long as there is any sense of self-righteousness with us, we are not trusting implicitly in divine intelligence. Did not Jesus say, "Thou hypocrite, first cast out the beam out of thine own eve; and then shalt thou see clearly to cast out the mote out of thy brother's eye"? That is, when all selfrighteousness is destroyed for us, we shall see clearly the unreality of the error in our fellow man's action. Until selfwill is forsaken, we cannot expect to see things in their true sense. Jesus never held evil as a reality, or judged it according to a human sense of right and wrong and then attempted to heal it on this basis. He immediately recognized error of any sort as only the supposed absence of the truth; hence his wonderful compassion for a man entangled in the meshes

When we yield to the law of divine Love we make no undue sacrifices. Mortal mind would have us believe that we are giving up certain rights. However, we must know

that our only legitimate right is to reflect Love; and when we become conscious, even in a small way, of the fact that man does dwell in infinite Love, nothing can disturb the peace and joy that are ours. As Christian Scientists, it is our duty to look through and beyond material conditions and behold only the harmony of spiritual reality. On page 264 of Science and Health we read: "Mortals must look beyond fading, finite forms, if they would gain the true sense of things. Where shall the gaze rest but in the unsearchable realm of Mind? We must look where we would walk, and we must act as possessing all power from Him in whom we have our being."

Open Thou Mine Eyes

KATE C. CLEVELAND

AWAKE thou that sleepest, and arise from the dead, and Christ shall give thee light." Were ever words more alive than these at this present time when we see the people running here and there, to this place and that place, to this person and that person, searching for wisdom and understanding and finding only knowledge, which Mrs. Eddy defines on page 590 of "Science and Health with Key to the Scriptures" thus: "KNOWLEDGE. Evidence obtained from the five corporeal senses; mortality; beliefs and opinions; human theories, doctrines, hypotheses; that which is not divine and is the origin of sin, sickness, and death; the opposite of spiritual Truth and understanding."

We who have been doing this are like scattered sheep who hear the roar of, but cannot see the lion, and are suffering from its seeming power; whereas if we would arise, and go to our Father we should be able to get the spiritual truth and understanding and see what this roaring lion is which is walking up and down the earth trying to disrupt the harmony of being and bring disaster into the midst of home life, state life, and nation-wide affairs, and be able to place it where it belongs as nothingness. Thus as Mrs. Eddy says on page 196 of Science and Health: "'Fear him which is able to destroy both soul and body in hell,' said Jesus. A careful study of this text shows that here the word soul means a false sense or material consciousness. The command was a warning to beware, not of Rome, Satan, nor of God, but of sin."

Do we, who call ourselves students of Christian Science, walk with God, or are we walking with a graven image which mortal mind tells us is a god, which, when seen in the light which Christ gives, is found to be a desire for worldly ease, comfort, wealth, and so forth? Can we ask ourselves honestly, in whatever work we are called upon to do, Am I doing this only for the glory of God? and hear the reply, Yes; or is there a voice whispering, No, you are doing it for self first? Let us lift up our eyes unto the Lord from whence cometh our strength and understanding, who will never lead us astray like lost sheep, but will be a lamp unto our feet and a light unto our path. Let us look to God as our source of all good; then shall we be blessed and able to bless our fellow man. Let us stand with Principle and not person. for it is only from Principle that we can receive light, and let us be obedient to Mrs. Eddy's wise counsel as little children, and rejoice that we have the commands of our Master and of our Leader to follow.

Who of us who have reached the years of manhood and womanhood has not felt a longing for the voice of a father or mother to tell us just what to do under certain circumstances? And yet as students of Christian Science, when we find in our Bible, or our textbook, or our Manual just what to do, then do we obey, or do we listen to the roar of the lion which says it interprets the words differently from the way they read, putting itself on a pedestal which is bound to crumble and fall? When doubt or fear creeps into the individual human consciousness to bring discord, let us form the habit of talking with God, Principle, as did Moses and the other prophets, and as did our Master, and later Mrs. Eddy, and we shall find the clouds of sense parting and furnishing us with the vision of the Apocalypse and bringing us into the kingdom of heaven here on earth.

Self-Consciousness

BLANCHE M. COLLEY

AMONG the faults of human character there is none more glaring than that of self-consciousness. It hinders and fetters its victim, constantly and without abatement. True talent, aspiration, and ambition it hides behind the stammering tongue of confusion, until its victim, discouraged and disheartened, is persuaded of the impossibility of attaining success or appreciation and understanding. Christian Science for help and comfort, the seeker is amazed at the statement that self-consciousness, instead of being a fault, hindrance, and handicap, is in reality a requisite to progress and success, a searchlight which seeks out and reveals hidden treasures of opportunity and unthought of possibilities for its possessor. How can this be? Christian Science makes clear the simple truth that, since God, the creator, made man in His image and likeness, true selfconsciousness, or true consciousness of self, is a result of a clear knowledge or understanding of God, good.

On page 276 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Man and his Maker are correlated in divine Science, and real consciousness is cognizant only of the things of God." All the qualities which constitute Deity are manifested and reflected by man, the image and perfect reflection of God. Is man poor? No. The affluence of good is his. God is his source of supply and substance is as infinite, limitless, as God is. Is man hopeless, helpless, depressed, or oppressed? No. Man has God-given strength, power, and dominion over all the earth, and as Mrs. Eddy says on page 518 of Science and Health: "His birthright is dominion, not subjection. He is lord of the belief in earth and heaven,-himself subordinate alone to his Maker." Is man confused, unable to know, to do, to be? Again, no. The expression of divine Mind is clear-cut, certain, and convincing. Man knows, man is, man does, because God is.

Since God changes not, but is "the same yesterday, and to day, and for ever," man, reflection, remains changeless and always at the point of perfection. "The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,-as the basis of thought and demonstration" (Science and Health, p. 259). Starting always with cause, God, infinite good, and learning even in a small degree what this statement reveals and unfolds, the thinker learns the truth about himself. In other words, one knows himself or is truly self-conscious just to the degree that he knows God, his Maker. It is the true self-consciousness thus gained which enables one to be calm, confident, assured, and steadfastly certain of victory and success along every line of right endeavor and activity, regardless of discouraging circumstance or clamoring discord. He sees, beyond and above and through it all, the unchanging reality of God's universe and God's man. This knowledge and understanding grows

stronger from each encounter with the false claims of material or mortal mind. With face turned unfalteringly toward the light and sunshine of divine Love and Truth, the seeker wastes no time in studying the shadow of lies, but holds fast to the truth of being.

To be truly self-conscious is to know, to be, to see only the perfect Mind expressed as perfect man, to prove every minute of every day the power and presence of the Christ-idea. It means joy in being, in doing, and in serving. It glorifies the humblest and simplest of tasks. It reveals a new world, filled with the "beauty of holiness," wholeness, completeness, and "the joy of the Lord." Complete and perfect self-consciousness reveals the grand reality of the truth in Mrs. Eddy's statement, found on page 183 of "Miscellaneous Writings," where she says, "Man is God's image and likeness; whatever is possible to God, is possible to man as God's reflection."

Confidence

LOUISE E. LITZSINGER

IT has truly been said that every one possesses confidence in a greater or less degree; but the questions arise: In what have we confidence? Is this confidence centered solely in the omnipotence of ever present good, or is it dimmed and obscured by belief and confidence in the reality of evil?

I can truly say that as an earnest Bible student from childhood I had strong faith in God, inspired both by my own study of the Scriptures and by the faith and trust of Christian parents; but up to the time when the unspeakable boon of Christian Science came into my life this faith was rendered virtually impracticable by the belief in evil's reality with all its claims of sin, sickness, and death. It is now plain to me that this was due to the fact that in the religious teachings with which I had been familiar, no hint was given of the absolute unreality of evil and its seeming activities. But when in Christian Science I glimpsed even in faintest degree the allness of God, good, and the consequent nothingness of evil, I began at once to be healed from physical troubles of many years' standing, and an indescribable peace and joy, before unknown, came into my experience. This proves that only by eliminating from thought all belief and confidence in the reality of evil, can the kingdom of heaven be consciously established within us. Jesus said, "The kingdom of God is within you." Experience proves that just in the degree that we are enabled, through Christian Science, to see through the claims of evil as they appear in our daily walk, and reduce them to their native nothingness, does our confidence in the omnipotence of ever present divine Love increase and enable us to prove Truth's healing power.

In reading once again recently, more prayerfully and studiously than ever before, the beautiful and helpful book "Miscellaneous Writings" by Mrs. Eddy, I gained a stronger confidence and sweeter sense of peace and assurance than had been mine before, from the following paragraph on page 383, where our dear Leader says: "In 1896 it goes without saying, preeminent over ignorance or envy, that Christian Science is founded by its discoverer, and built upon the rock of Christ. The elements of earth beat in vain against the immortal parapets of this Science. Erect and eternal, it will go on with the ages, go down the dim posterns of time unharmed, and on every battle-field rise higher in the estimation of thinkers and in the hearts of Christians." These words expressing our dear Leader's calm and serene

confidence in Truth's ultimate victory over error, came like a sweet benediction, and lifted thought to the perception, in a measure, of the Master's exalted and sublime confidence in Truth, when, though he had left no written record of the mighty word he had spoken, he was nevertheless able to say, "Heaven and earth shall pass away, but my words shall not pass away." He knew that this omnipotent healing truth would go down the ages. He knew that it was "the true Light, which lighteth every man that cometh into the world." So also Paul, who labored so abundantly, through his unwavering confidence in Truth was able to withstand and undergo afflictions and persecutions in their direst forms: and when error screamed its loudest was able to declare, "None of these things move me." And so may we as Christian Scientists, to-day and always, confide in divine Love's tender care and protection all our activities.

Mother

ALEXANDER F. PRIMROSE

WHAT would be the best profession for my son, where he would be least likely to come up against the dangers every young fellow meets when he goes out into the world?" This is the question all parents ask when considering their children's future, and it is just because they wish to protect them against the experiences they have had to go through themselves. But how are they to keep them uncontaminated from the world? Children will grow up and, sooner or later, must go out into the world alone. The easy way is, of course, to say and do nothing and simply mark time, while the old excuse is trotted out that it will be time enough when the children are older. It is perhaps natural that parents should hope to be always able to keep their children under their own supervision, but it is a dangerous practice. Every one knows the old saying, "A son of the manse," while many a man looks back on his younger days and thinks how different things might have been if only he had been told something of what was in front of him. If only he had been forewarned and so forearmed, and if there had only been some older person of whom he could have made a confidant. But people are often too afraid to speak, and children too shy to ask questions. Now what seems to shackle human beings as they grow up is the feeling that they are governed by an influence or power which they are unable to resist. It seems to prevent them from doing what they know to be right and makes them say and do things which only bring in their train intense remorse. Is not this what made Paul cry out, "For the good that I would I do not: but the evil which I would not, that I do. . . . O wretched man that I am! who shall deliver me from the body of this death?" But if it could only be realized that every one is faced with the same problem, would there not be less hesitation to bear one another's burdens?

On board ship one day, a group of officers were sitting round the mess table discussing this very question of the choice of a profession. The striking thing about the gathering was the great variety of experience these men had had. Some were army and naval officers, with a wide knowledge of foreign lands, while several others represented civil professions. Between them most cities and parts of the globe had been visited and most of the world's highways and byways explored. One after another gave his opinion. Life in garrison towns and naval ports was compared with that in the large city and the country home. In the end the feeling was that there was little to pick and choose be-

tween them. This was no new discovery. These men, sitting round the mess table, did, however, come to a rather striking conclusion. One thing they unanimously decided did matter, and that was whether a boy had "a good mother."

But, it may be asked, what about the youngster who has no parents and no one to turn to? Is he to learn only through the school of hard experience and take his chance of going through the fire and coming out without a smell of burning? The answer is, No. There is a way of escape which Christian Science points out. The discovery of Christian Science came to Mrs. Eddy in the hour of great need when she was suffering from the results of an injury which had been pronounced incurable. In describing her healing, she tells how she called for her Bible and opened it at the following verse: "And, behold, they brought to him a man sick of the palsy, lying on a bed: and Jesus seeing their faith said unto the sick of the palsy; Son, be of good cheer; thy sins be forgiven thee." What Mrs. Eddy evidently saw was that this sick man had been healed through understanding that man is the reflection of God and that consequently man could never for a single moment be a sick and sinning mortal. It was Jesus' clear apprehension of this relationship between God and His idea, and of the fact that God as divine Principle, Love, created nothing which is not spiritual, harmonious, immutable, and eternal, that revealed to him the great truth that the emanation of infinite Life, Truth, and Love could not be this ailing mortal lying before him on a bed. The illusion was seen to be an illusion, and the man arose healed and departed to his house.

Sin is forgiven only as the belief in sin is destroyed; and what more effective method could there be of wiping out sin than by exposing the entire fallacy that either the sinner or the sin ever existed? If God never made sin and knows nothing about it, it can have no power or influence over man and cannot possibly separate God and His idea. Sick and sinning humanity must, however, be willing to give up old, false concepts and beliefs and in humility be willing to seek a truer conception of Deity. "Self-abnegation," declares Mrs. Eddy on page 568 of Science and Health, "by which we lay down all for Truth, or Christ, in our warfare against error, is a rule in Christian Science. This rule clearly interprets God as divine Principle,-as Life, represented by the Father; as Truth, represented by the Son; as Love, represented by the Mother. Every mortal at some period, here or hereafter, must grapple with and overcome the mortal belief in a power opposed to God."

What a wonderful thought it is that this mortal man or woman called "me" is not the real "me," but is only the counterfeit of man made in the image and likeness of divine Love. What a joy to realize that matter is not the creator of man and the universe, and that therefore man is not bound by the laws of environment, education, and hereditary belief. Man, instead of being the offspring of human parents, is seen to be the forever emanation of Love and always under the care of the one Father-Mother God. Does this not remove all sense of fear and loneliness and make it impossible to imagine the true and only man ever being outside the consciousness of Love? Are not the arms of divine Love always outstretched to comfort with a mother's care and to welcome into the heavenly kingdom? Remember the verse in the old hymn:—

Can a mother's tender care Cease toward the child she bare? Yes, she may forgetful be, Yet will I remember thee.

The Light of the World

It seems to be beyond words difficult for the average human being to grasp the larger meaning of the simple words in daily use. So accustomed are people to the finite, often petty significance attached to these words, that the full intention is perpetually overlooked. The world, for instance, talks about Truth in a casual, indeterminate way. It has come, indeed, to reduce it almost to the limits of men's relative understanding of the facts of everyday existence. It has almost ceased to define it in terms of absolute metaphysics, and as a consequence, it is utterly confounded when it comes across the word in such a passage as that in the Fourth Gospel, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." However, as Mrs. Eddy points out, on page 570 of Science and Health, in writing of the woman clothed with the sun, the spiritual idea of Truth, "In this age the earth will help the woman; the spiritual idea will be understood."

The ways of God, Principle, are past understanding by the human mind. They can be grasped only through spiritual perception. So it comes about that the great gulf which the human intellect has fixed between natural science and the metaphysics of the schools is being bridged, with the result that the earth, material knowledge, is once more about to help the woman, the spiritual idea, or generic man, by proving the oneness of the relative truths of even human knowledge, when inspired by a desire for Truth, and so paving the way for the world's acceptance of that which Jesus the Christ preached, and which the writers of the New Testament have proclaimed as $\dot{\eta} \epsilon \pi i \gamma \nu \omega \sigma \iota s \tau o \hat{v} \theta \epsilon o \hat{v}$, the scientific knowledge of God, Truth. This, by way of example, although the world does not see it yet, is just what the discussion of the Einstein theory is doing. The contemptuous arguments of the natural scientists are being beaten about their ears by the clubs of pure mathematics, and already a clearer perception of what Truth really means is coming to mankind. "Throughout all generations both before and after the Christian era," Mrs. Eddy says, on page 333 of Science and Health, "the Christ, as the spiritual idea,-the reflection of God,-has come with some measure of power and grace to all prepared to receive Christ, Truth." The demonstration of Christian Science is thus forcing an open door, and men are beginning really to understand, after all these centuries, something of what the light of the world is,-the Christ, Truth, which is to free the world.

Now, herein is the open door, that, as Peter found in Jerusalem, and Paul and Silas in Philippi, bars do not require hands to remove them, nor bolts fingers to shoot them. Men are in prison to ideas, ideas thrust upon them by education, and objectified in matter, ideas purely supposititious inasmuch as they are nothing but counterfeits of some reality. The metaphysician of the schools has got as far as this, in recognizing that all that exists of matter is a subjective con-

dition of the human mind, and now the natural scientist, resisting all the way, is being driven by Einstein to precisely the same conclusion. Presently he will say, as Agassiz has warned us, that he believed it all the time. But then will come the moment when it will be discovered that demonstrations of Truth cannot be made on a basis of the relative truths of human knowledge. It was there that Plato failed, it was there that Abelard was shipwrecked by his pride of intellect, and it was there Berkeley found his Philippi. It was there, on the other hand, that Aristotle discovered the excuse for his philosophy, that Anselm lost himself in materialism, and it was on that that Newton established his mechanical theory.

One man, however, Moses, before even Plato, had seen, however dimly, in the mist of the sensualism of Egypt, Spirit where others saw only matter; one man, midway between Plato and Anselm, Christ Jesus, had, in the era of the triumph, as it were, of Roman materiality and ferocity, perceived and demonstrated the utter nothingness of matter and the allness of Truth; one woman, two centuries after Newton, had rediscovered the secret of the demonstration of Christ Jesus, and, in the teeth of the cold, philosophic materialism of her day, proclaimed the omnipotence of Principle. The truth which Jesus the Christ had declared never could pass away was found to be still present, and this truth was shown to be the source of men's freedom from every phase of its material counterfeit. "To-day," Mrs. Eddy says, on page 150 of Science and Health, "the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition."

What produces the lies, then, of sin, sickness, and death, is men's ignorance of Truth; and it is the simple fact that matter is unreal and that they are sleeping in the prison of Peter and Paul with their fetters loose and the doors wide open, in other words, that Truth is harmonious reality, that gives them the opportunity to claim their divine citizenship, as it gave the paralytic man the power to arise and take up his bed and walk. The student of Christian Science has realized that neither in his own case nor in that of his patients is there any physical sickness to be overcome. Man as the image and likeness of Truth, Principle, is always perfect and always whole; that is the truth, the scientific fact which makes him perpetually well. When this is grasped, the false belief of sickness disappears like any other lie, and the solid fact that man is perfect is found to be indestructible truth. "Ye shall know the truth, and the truth shall make you free,"-free from what but the lie?

If there were actually anything to heal, the practitioner would be struggling with the problem of transmuting evil into good. As it is, all he has to do is to destroy his false sense of a counterfeit of reality. The consequence is that the whole effort of Christian Science resolves itself into a determination to know, so as to be able to demonstrate, the Christ, Truth, which is the light of the world. The beasts, then, with which Paul fought at Ephesus, were the temptations and suggestions with which his unconquered materiality flooded his consciousness. They came, however, out of nowhere, and departed into nothingness. They were the figures of a shadow pantomime counterfeiting realities. Therefore Paul distinguished between the unreal and the real, the supposititious law of his members and the Christ, Truth. It was thus, also, that Jesus, on the occasion of the feast of the tabernacles, speaking to those about him, in the court of the women where stood the great golden candelabra, which on the first night of the feast cast their light into the otherwise unbroken gloom of the city, drew the contrast be-

scends any human makeshifts and satisfies because of its

unlimited variety. Thus on page 215 of "Miscellaneous Writ-

ings" Mrs. Eddy declares that "Christian Science demands

order and truth. To abide by these we must first understand

the Principle and object of our work, and be clear that it is

Love, peace, and good will toward men." It makes for cheer-

fulness to know that the order of Principle is infinitely

greater than any mortal sense of arrangement, that the true

idea is real to the only Mind there is right now, and that any

belief in disorder is powerless to thwart the unfoldment of

good. The knowing of this is, moreover, the way of serving

that is constructive and not destructive. It is the expression

of divine Love for the benefit of all mankind. The benefit is

that, through such right reasoning, the belief that there is a

kind of man ever in distress and turmoil vanishes, while the

First Church of Christ, Scientist, and Miscellany," "will be

God-governed in proportion as God's government becomes

apparent, the Golden Rule utilized, and the rights of man

and the liberty of conscience held sacred. Meanwhile, they

who name the name of Christian Science will assist in the

holding of crime in check, will aid the ejection of error, will

maintain law and order, and will cheerfully await the end-

justice and judgment." When one knows that he has all

of eternity in which to prove Principle, he is bound to be

cheerful. His cheerfulness comes from no putting off until

to-morrow of what needs to be done to-day. It arises from

his very consecration to Principle, through which he realizes

the infallibility of good as the expression of the divine Mind.

It is produced by the true intelligence that fills the now with

to wait on, or serve, Principle now. Thus must one demon-

strate that immediate healing which is wholeness of action

in accord with divine Love. Cheerful waiting, understood

in this way, does not defer healing until a future and sup-

posedly more propitious period, but proves the healing ac-

tivity at all times and in all ways. One genuinely interested

in the practical operation of Christian Science learns to be glad that this vigilance is required of him. Desiring the en-

tirety of Christian Science as the expression of Principle,

such a one takes advantage of all that Mrs. Eddy has provided for the progress of sincere seekers, and proves day by

day the rightness of his practice. Thus he learns to manifest the perfection of judgment in his ordinary experience,

and to rejoice that the goodness of God certainly does endure

[Written for the Sentinel]

Since God Is Good

MAY CARLETON

The power of good is all there is;

The law of Love is then supreme;

Since God is Life, and Life is God,

Why bow down in despair?

Since God is Love, and Love is God,

All else we thus efface.

And God is everywhere,

And God is always here, What is there then to trouble us?

What is there then to fear?

SINCE God is good, and good is God, And God so fills all space,

GUSTAVUS S. PAINE.

Christ, Truth—"am the light of the world: he that followeth

me shall not walk in darkness, but shall have the light of

life." A little later, pressed by the Pharisees, he declared,

"If ye continue in my word, then are ye my disciples indeed;

and ye shall know the truth, and the truth shall make

Cheerful Waiting

RIGHTLY understood, waiting is much more than a look-

ing to the future for the development of good. The true

idea includes vigilant service. Thus it is not really an ab-

staining from action, but it is a doing in the now of what

Principle requires now, with the comprehension that infinite

Principle uses all of eternity for unfoldment. Of course

eternity is not a mere future, supposed to follow the to-day

of mortality. In fact, to the divine Mind there is no division

of experience into future, past, and present. Infinite Mind

knows all good as ever present actuality. When one un-

derstands that immortal man lives in Mind and not in mat-

ter, one rejoices in the possibilities of the present eternity

breast," because people are dissatisfied with the human

sense of things and look for something better ahead of them,

without discerning that the only way in which human living

can be improved is by a complete turning away from the

earthly seeming to divine Principle and its manifestation.

It is by the melting away of human belief before the divine

reality that, paradoxically speaking, such a belief is im-

proved. The true waiting on Principle is much more than the

ordinary sense of hope. As discernment of the right way is

revealed through Christian Science, the vain hope that mor-

tality may be perfected is replaced with the sureness of

At a time of human pessimism and cynicism, of reaction

Testimonies of Healing

About fifteen years ago we had our first healing through Christian Science, when my little son was instantaneously healed of a fractured and dislocated shoulder. Since that time Christian Science has been our only physician. One of my sons was healed of a discharge from his ear, following measles, which material remedies had failed to relieve. I was healed of tonsillitis which had recurred each year for many years, of diphtheria in a very severe form, and of blinding headaches which had become so frequent that I sometimes had three in a week.

About five years ago a claim presented itself which was not so readily overcome, and I now realize that I had called upon a practitioner very much as I had called upon our family physician, without realizing for myself what this wondrous truth is that had met our every need. After having been treated for a year and a half by a Christian Science practitioner, diagnosis by a physician was deemed advisable. He pronounced it a well-developed case of fistula. Christian Science treatment was resumed, and for nearly five years I was under constant treatment. Finally when it seemed that I could bear the pain no longer the physician who had diagnosed the case was called, but before he arrived the healing came, although it was not apparent at first, and he said nothing but an operation could cure me, as a horseshoe abscess had formed. The practitioner reminded me that the truth was operating in my behalf and that I did not have to outline when or how the operation of the truth would be manifested. I improved steadily from that time, though many times the old suggestions would try to tempt me into believing that it might come back. Recently I again went to the same physician for examination, that others might be as sure of the healing as I was. He pronounced me completely healed, and said that he was very glad to do so.

I cannot express my gratitude for all of these blessings, and more than all I am grateful for the joy of studying and demonstrating the truth, which God has revealed to this age through our Leader, Mary Baker Eddy. The periodicals are a constant inspiration to me and are my daily food, after the Lesson-Sermon.

(Mrs.) MAUDE F. WICKMAN, Berkeley, California.

٠

The testimonies have helped me so often that I wish to express my gratitude through the periodicals, hoping it may likewise help others. Christian Science came to me not through need for physical healing nor a desire for spiritual comfort, but just because the time was right. A friend came to me one day with a roll of copies of the Sentinel. Tossing some into my lap she said, "Here is something good for you to read. I am going to read them, too." We both read, and almost at once I was deeply interested. I had never cared for church and used to joke about religious things, but in one half hour's reading everything was changed.

That was six and one-half years ago and in that time I have had many opportunities to prove that God's law is operative here and now. From the time I was a little child I was sickly and my worst enemies seemed to be colds on my lungs, tonsillitis, and constipation. My first healing, of tonsillitis, was almost instantaneous. Once or twice since then I have had that enemy to overcome, but it was a feeble enemy and quickly destroyed. Constipation yielded very soon and has never recurred. A sprained ankle was overcome in a few hours and a ligament which

had been torn from the breastbone was perfectly healed in less than a week's time, and I did not give up my work during that period. A great sense of fear, especially of fire, has left me through the new understanding of the ninety-first psalm. My little one-year-old daughter has never been ill and has never tasted medicine.

While there have been several physical healings, still Science has been more preventive than curative in my case. To me, who formerly had been delicate and sickly all the time, this is as wonderful as great demonstrations of healing. At the time of my father's passing away, I was greatly sustained by the understanding that there is no separation. Greatest of all benefits is the change in my thought about God and church, that came with the spiritual awakening in my first hour of reading. I had never had any desire to join a church, in fact laughed at the idea, but I am very happy now to be a member of The Mother Church.

(Mrs.) FLORENCE E. HANCOCK, Haskell, Oklahoma.

٠

If any man is grateful for what Christian Science has done for him it is I. From a man seeking the life of another I was changed into a seeker of Truth. Mortal mind, so called, argued that I was having the worst thing done to me that any man could have done to him, and screamed: "Follow and destroy. You have truth and justice on your side. No jury on earth would convict you." Of course, looking for error I found lots of it; but, as Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 476), "Error, urged to its final limits, is self-destroyed," which the following will prove.

All of my case was proved against my supposed enemy. Every detail was perfect. I had the evidence of his guilt in my pocket, and I did not care if I were apprehended or not after his destruction. I had no weapons but my two hands. I am a large man physically and at that time stood six feet, weighed over two hundred pounds, and had plenty of merely animal courage. I boarded the train and went to the city depot. I knew where to get off and take an elevated train to my supposed enemy's place of business. When the train stopped at the terminal I was in the rear end of the last car. As I followed the other passengers out I saw a copy of the Christian Science Sentinel lying on a seat. I picked it up and kept on walking. I do not know what I read, but I do know I walked maybe sixty or one hundred feet to a telephone booth, picked up a directory, found the word Christian Science, and the word practitioner after it. I did not know what they did, but I knew what the word "Christian" meant, so I found the telephone number of the one who I thought was the nearest to my residence, called her up, made an appointment with her for that evening, then walked out of that booth into a new world, and went about my duties, and that evening I received my first treatment in Christian Science. The first thing I was cured of was fear. I went home and slept all night, something I had not done in five months. In the morning, as usual, the first thing I started to do was take a chew of tobacco. Immediately there was such disgust for it that I threw it and a handsome leather pouch in the garbage can and have not used any chewing tobacco since.

I had not been studying Christian Science long before I had an opportunity to experience the healing of pneumonia. I worked as best I could in Science, but seemingly grew weaker all the time. The person who was supposed to be the most interested in my welfare at that time sent for a

riccis is

doctor, without my consent, and I sent for a practitioner, who came: but when she came she saw such evidence of opposition that she said she could not treat me under such conditions. She said, "God will lead you," and left. No sooner had she gone than the doctor said he could not come. He was told I wanted Christian Science treatment and he said he could not come but he would issue the death certificate. I sat in my chair rapidly lapsing into seeming unconsciousness, but this was what I was thinking: "The practitioner has gone, and the doctor does not want your case: what are you going to do about it? God never left you, and He will not desert you. You are being tried, but how are you going to get out of this?" All at once I recalled the practitioner's words, "God will lead you." He did; He led me into my overcoat and out into the street, where I walked a long block to a street car, transferred twice, then walked up a flight of stairs and knocked on the practitioner's door. She opened it and I went in, and each day after that I went for treatment until I was healed.

I am thankful for this opportunity of expressing gratitude for benefits received.

JAMES W. WATSON, Chicago, Illinois.

To have proved by actual demonstration the truth of the Scriptural text, "The word of God is quick, and powerful," is one of the innumerable blessings that has come to me through the study of Christian Science.

Two years ago, a visit to the dentist resulted in a diagnosis of pyorrhea. The condition was found to be so serious that he could not proceed with treatment. I was given a prescription for a medicine which was to be used copiously morning and night for five days, and then, if the inflammation was allayed, the treatments, which were to cover a long period of time, would be started. Upon leaving the dentist's office I telephoned to a Christian Science practitioner, and absent treatment was started at once, followed by relief the next morning. After five days I returned to the dentist knowing that the discordant condition had been entirely healed. It was interesting to see the expression on his face and to hear his exclamation: "What is this! You are entirely healed!" And indeed, there was no trace then, nor has there been since of that disease.

Gratitude is voiced not for the healing, per se, but for the proof that spiritual law supersedes every so-called material law. For Mary Baker Eddy, God's messenger to this age, I have the profoundest love and appreciation.—(Mrs.) Belle R. Matthews, Cedarhurst, Long Island, New York.

Having been wonderfully benefited by Christian Science, I wish to give my testimony, and thereby help others who are seeking the truth. I first took up the study of Christian Science to see if it would help a relative, not thinking of my own need, which I afterwards found was very great. One day after about six weeks' study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I had a sudden attack of severe internal pain and violent sickness, of which was healed instantaneously by reading an article in the Christian Science Sentinel, which had been sent to me by friend. I have also been healed of nervous indigestion, eumatic cramp in my legs, and rheumatism in my hands. treme weakness following an operation has also been rcome, as well as pains in my back resulting from pneuia. The latter healing was instantaneous. There has no return of any of these troubles, the healing of which place nine years ago. Quite recently I was healed instantaneously, through the help of a practitioner, of an acute attack of bowel trouble.

Through the realization of the truth I have been healed of what at the time seemed a great sorrow. There is no problem that cannot be solved through the understanding of Christian Science. The literature has been of much assistance, many times meeting a pressing need of the moment. I had been a member of a denominational church for a number of years, but the revelation, through Christian Science, of God as Mind made an unreality of every other concept I had had. It is my great joy to be a member of The Mother Church. I am extremely thankful to Mrs. Eddy for her consecrated and loving work for mankind.—(Miss) ELIZA SHELLEY, Thornton Heath, Surrey, England.

In gratitude for the understanding of God which I have gained through Christian Science, I send this testimony. About ten years ago this great truth came to my attention through a friend who had been healed. At that time I was struggling with sorrow, loss, and ill health. I had been very ill

struggling with sorrow, loss, and ill health. I had been very ill and was still extremely nervous and reduced in weight. Doctors had told me I would never be a well woman. I had at this time found it necessary to enter the business world. I was filled with anxiety and care, for this was my first attempt

to earn a livelihood. I was indeed physically unfit.

Christian Science was presented to me so beautifully that I at once felt I had found something on which I could rely. It was a revelation to know that God is Love and is the Father-Mother of us all, and does not send sickness, sorrow, and bitter trials upon us. I had lived a prayerful life, yet my prayers did not bring healing. I wanted to know more about this teaching, for I was hungry for the "Science and Health with Key to the Scriptures," by Mrs. Eddy, was read whenever I could find time, and although I understood it but slightly I knew it was indeed the truth as taught and practiced by the Master. I was greatly benefited by the reading but did not at that time realize it. My health improved and I gained steadily in weight. Nervousness and fear were lessened and I began to be very happy. Resentment was cast out and love and forgiveness took its place. My friends who had known of my experience and ill health marveled at the great change. A spiritual uplift was realized and I had a different outlook upon life.

I wanted to share this truth with others, and especially a sister, to whom I sent the copy of Science and Health that I had purchased, not realizing that I could not be without this book and continue to progress. As a result I drifted from the teaching of Christian Science for over two years. Then there came a time when I wanted to get back to the Father's house. The husks of the world no longer satisfied, and the following words of Mrs. Eddy were realized: "The sharp experiences of belief in the supposititious life of matter, as well as our disappointments and ceaseless woes, turn us like tired children to the arms of divine Love. Then we begin to learn Life in divine Science" (Science and Health, p. 322). I then began an earnest study of the Lesson-Sermons, and purchased another copy of Science and Health and the other writings of Mrs. Eddy. I attended church services when I could, but I was at this time traveling for a large manufacturing house. I have experienced many physical healings, such as of nervous prostration, kidney trouble, stomach and bowel trouble, headache, throat trouble, and colds. A very painful sprained ankle was healed by absent treatment. After two days I was out, walking long distances without the slightest discomfort. Many times when danger seemed imminent, I have been protected by clinging steadfastly to God's promises of protection as so beautifully given in the ninetyfirst psalm. Christian Science has taught me to look upon my work as the Father's business. This correct view of work enabled me to do better and more conscientious work, which brought promotion and a corresponding increase in

I have seen many types of error disappear through the understanding of Truth. I witnessed the healing of a sister from gallstones and valvular heart trouble through absent treatment. The healing was instantaneous, as recovery took place at the same hour in which the practitioner received the call. This revealed very clearly that time and space are not obstacles to the operation of omnipotent, omnipresent Mind. I cannot be grateful enough for such wonderful demonstrations of the power of God. This truth has met my every need, and has never failed when rightly applied. Grief occasioned by the passing away of a loved one was healed by the understanding of the omnipresence of Life, and that there is no separation in the realm of the real, in which God's child lives, moves, and has his being. Words fail to express my gratitude for the sustaining power of the truth in times of trial.

I am grateful for all healings and very grateful that I accepted Christian Science when offered to me, for its teaching has brought untold good into my life. The following lines from our Leader's poem, "Christ My Refuge" (Poems, p. 12), has become my prayer:-

> My prayer, some daily good to do To Thine, for Thee; An offering pure of Love, whereto God leadeth me.

(Mrs.) Ella Davisson, Charlottesville, Virginia.

I wish to relate some of the blessings I have received through the study and application of Christian Science. I became interested in 1914, and through reading Science and Health I was healed of kidney trouble, weak eyes, and sick headaches; also of the need for wearing glasses, and of other ailments. My first healing through the work of a practitioner was of rheumatism, in two treatments. It was in 1916 that I procured a copy of Science and Health and began studying the Lesson-Sermons. Then I began trying to work out my own problems. I am indeed grateful to the friends and practitioners who have always so gladly helped me.

I have been in a profession the last four years that has kept me traveling most of the time, and I have never been without God's protection. At times my experiences have not been exactly what I would have chosen, but I have always succeeded in getting lessons from them that were for my good. I wish to express my gratitude for the literature. I could not get along without the Christian Science Sentinel.

(Miss) Blanche E. Brown, Mesita, Colorado.

The writer has many times blessed Christian Science for delivery, some ten years ago, from desperate conditions of fear and illness, for many victories since over the false, human sense of things, and for many remarkable healings, through the persistent knowing that God is the only Life.

While attending a concert of a musical club a young doctor, an acquaintance, who had been standing very close to me during an intermission regarded me very strangely and suddenly whispered, "Come to one side, I must speak to you." I did so, wondering at his urgency. Quite excitedly he said, "Will you take a friendly hint?" Surprised I said, "Why, doctor, what is it?" He then went on to urge very earnestly an immediate consultation with a relative of mine who is an eminent surgeon, indicating that I had Bright's disease, which required immediate attention. I thanked him composedly, but was several days in entirely overcoming the many suggestions of fear which it aroused. With this great revelation of Christian Science in thought, that God is the only Life, and has no part in sickness or disease, I knew that no mortal belief could affect man's life.

About a year after this the surgeon referred to was visiting me, and recalling the young doctor's diagnosis of the previous year, I began to tell him of the circumstances. He interrupted me by declaring the sincerity of the young man's interest in my welfare, and to my surprise stated that the young man had very kindly communicated to him his diagnosis of my case, and both of them had been carefully watching me for over a year, expecting to see the diagnosis verified, which it would have been but for the power of Christian Science, which healed me. They could not understand the manifestation of perfect health all that time.

I thank God that Life is eternal, as demonstrated by Christ Jesus, and for the revelation of Truth as given to the world in Christian Science by Mrs. Eddy.

CHAUNCEY IVES, Rye, New York.

It is with a heart full of gratitude for the many blessings that have come to me and mine through the study and application of Christian Science, that I wish to testify to some of them through one of our periodicals, hoping that it will help others, as the testimonies of others have helped me many times. I was brought up in a Christian home, and became a member of a denominational church when I was quite a girl, but as years went by I found my religion did not bring peace and happiness so I turned my thought to worldly pleasures, and a number of years ago I laughed at what I thought Christian Science to be, as many others have done.

I had many severe sicknesses and seemed to recover only to have another even more severe. Six years ago I suffered from what the doctors called rheumatism and uric poisoning, and was pronounced incurable. I was a sufferer for months, and was confined in bed for over five months, with seemingly no hope. A friend came to see me when it was thought that I would pass away, and asked me why I did not try Christian Science. She said she knew nothing of it herself, but she had heard of a wonderful healing. I finally gave my consent and a practitioner was called, and that night for the first time in months I slept without opiates. In five weeks I was sitting up and in ten more I went to work. After a while doubt and discouragement seemed to hold sway, and I thought I should get well faster, so I turned to material remedies again. I went to an osteopath and after he had treated me for several months he told me he could do no more for me. Then I went to a masseur, who seemed to help me for a while, but only to be told the same thing,—that he could do no more. Then I turned, as have many others, to God absolutely, and went to work in earnest to search for "the pearl of great price," and every mortal law was proved untrue, for I am very far from being a helpless invalid. I do more work with less effort than I ever did before. The first healing, which seems wonderful to me now, was the clearing of one of my ears from the supposed effect of typhoid fever, that I had when a child, and there has been no return of this condition.

I should like to speak of another healing that means much to me, that is of hate, which caused suffering almost unendurable, but it has vanished, and in its place are love and compassion. My home has been transformed. Surely "man's extremity is God's opportunity." Many times I became discouraged and then I would realize that cross and crown are inseparable, and that I could not expect the prize before the race was run.

I am grateful to every one who has helped me in any way in my seeming struggle, and hope to prove by my works to be worthy of calling myself a Christian Scientist. I am thankful to God, to Christ Jesus the Way-shower, and to Mrs. Eddy, who was spiritual enough to perceive the truth and to reveal it to mankind.

(Mrs.) Lucy M. Dyer, Sacramento, California.

4

A deep sense of gratitude prompts me to tell a few of the blessings which have come to me through Christian Science. After the birth of my baby I had lain in bed for some weeks and was unable to raise myself up. Having been told by my doctor that he could do no more for me, a dear sister asked me to try Christian Science treatment. I consented, received help immediately, and in a few days was able to sit up, and soon regained strength. At the end of the third week I was able to do all my own work. We have since had many instances of healing in our family and many proofs of God's care. My youngest son was healed of a severe cough of some years' standing, and my eldest son was healed of severe burns, the result of an explosion.

I had the privilege of attending the dedication of the extension of The Mother Church, and of being one of the many to see and hear our dear Leader, Mrs. Eddy, at Concord, New Hampshire, in 1903, and to hear the words from her lips, "In parting I repeat to these dear members of my church: Trust in Truth, and have no other trusts" (Miscellany, p. 171). I have had many proofs of the efficacy of trusting God absolutely. I am thankful for the Christian Science Sentinel, the gift of our Leader, for through its pages many receive encouragement from those who have proved that God is an ever present help. I trust that I may grow more in the knowledge of Truth and prove to be worthy of the name Christian Scientist. I am deeply grateful to God and to all who have labored for our cause.

(Mrs.) MARY A. OWENS, Puyallup, Washington.

+

For a number of years Christian Science has brought peace and joy to our family. The truth as taught in Christian Science, when properly applied, has never failed to heal and bless us. On one occasion an ulcerated tooth accompanied by the pain and swelling usually experienced in such cases was pronounced by a dentist to be in such serious condition that it could not be treated for at least three days. Immediately after this interview a Christian Science practitioner in a distant city was called upon for help. Relief from pain was experienced immediately and all appearance of swelling had disappeared in three days. The proof of the healing power of Truth gained by this experience has helped me to give less power to the testimony of the physical senses than before.

For a long time I was subject to severe headaches, which usually lasted for a number of days. The truth expressed at a Christian Science lecture helped me in overcoming this inharmonious belief. Rheumatism has also entirely disappeared. Many times burns and cuts have been overcome without pain. I have every reason to be very grateful for a

knowledge of Christian Science; it is my most cherished possession.

Mrs. Eddy's writings are my daily companions and I am growing to know her rightly through them and to appreciate the great work she has done for the world. It was through the Christian Science Sentinel that I was led to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I love all the literature founded by Mrs. Eddy, for it is largely through these periodicals that a knowledge of the impersonal Christ is reaching mankind.

(Mrs.) AMMA C. NICHOLS, Brookline, Massachusetts.

٠

I should be very ungrateful if I did not acknowledge some of the healings and help I have received through Christian Science. When I first heard of Christian Science about five years ago, I had a very unsightly skin eruption on my face. I had tried several doctors and endless remedies, but without any good result, and the condition became worse. Then I heard of Christian Science and went to a practitioner and asked for treatment. Although the healing was slow and I was often discouraged, I learned during that time, through the loving help I received, to think less of self and more of God, and when I ceased to fear it the trouble entirely vanished. I have also been healed of pleurisy and congestion of the lungs, a troublesome cough, influenza, a gathering in the ear, and other discordant conditions.

I am very grateful for these healings and extremely grateful for all the literature, which has always been a wonderful source of comfort and help.

(Miss) JUDITH NELMES, London, England.

٥

I wish to express my gratitude for all the benefits received through Christian Science. In 1912 I had two serious surgical operations and as a result a severe nervous breakdown. The doctors could do nothing for me. Then, upon the recommendation of my daughter, I turned to Christian Science, and through the loving help of a faithful practitioner I was healed. I have also been healed of a great sorrow through the understanding that God is Love and that He only sends good to His children. Fear, resentment, and erroneous thoughts have also been greatly overcome. The way at times has seemed rugged, but as I each day gain a little more understanding of the allness of good and the nothingness of evil I am helped onward.

Great gratitude is also felt for the practitioners' loving help and for the literature, which always seems to meet my need, either through an article or a testimony. I hope to be able to show my gratitude in deeds, as words cannot express it. For all my blessings I am truly grateful, also for some understanding of the truth which I have gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, our revered Leader.

(Mrs.) CATHERINE D. HEARNE, Shanghai, China.

4

I wish to express my heartfelt gratitude for what Christian Science has done for me. I have been healed of piles that I had been troubled with for twenty years; also of nervousness, and the benefit I have received in everyday life has been wonderful. I started to read Science and Health in order to criticize it, but before I got through I found it the most wonderful book I had read outside of the Bible. I am very thankful for it, also to the kind practitioner who helped me to a better understanding that divine Love is, always has been, and always will be sufficient for all human needs.—F. A. Berry, St. Louis, Missouri.

Signs of the Times

["A Century Aflame"-The Christian Science Monitor, Boston, U.S.A., Jan. 1, 1921]

Nearly one-fifth of that century has gone of which Mary Baker Eddy, Discoverer and Founder of Christian Science, wrote at its beginning (Poems, p. 22):—

Thou God-crowned, patient century,
Thine hour hath come! Eternity
Draws nigh—and, beckoning from above,
One hundred years, aflame with Love,
Again shall bid old earth good-by—
And, lo, the light! far heaven is nigh!

And what wondrous revelation of good already has taken place in that period, urged on by the law that is true. For the law of the real universe, the kingdom of Spirit, is unending and happy unfoldment. The fact that Mind is Mind, or consciousness, means that it is actively conscious of its creation. All of Mind is active and Mind is always active. For that very reason the universe of divine Mind or God manifests continuous vigor. Principle unfolds its own reflection as the exact pattern of itself, and Principle is never standing still, in the sense of stagnation, but is always bringing forth infinite newness. Then, because the so-called material world is increasingly dropping off qualities unlike the real, and will do so until all materiality vanishes, the universe of men will be found to be less and less lethargic as each year is put upon the scroll of time. Consequently, answering the law of Principle, the world and its systems, lest they go to seed and bring forth no more fruit, are required by the demands of Truth to be continually at the work of expressing more and more of Truth.

Love is Principle,—not the human sense of love which sometimes forgives wrong without righting it. Principle is the Love or Mind that knows only the vigor of good, a vigor that is strong against any belief of evil, so strong indeed that the very allness of good has forever made nothing of all supposed opposites. This Love which burns up, or destroys, the untrue, because good and evil cannot dwell together, is seen in that verse of the Psalms, "Our God shall come, and shall not keep silence: a fire shall devour before him, and it shall be very tempestuous round about him."

No matter how much men may dally with the days of each passing year and hope against hope for the "good old days" of a mimic tranquillity, they must still remember that the Christ comes "not to send peace, but a sword." The very nature of the Christ as the expression of God or Principle means the uncompromising destruction of anything claiming to displace the Christ. It brings thought to that other passage in the Bible, "For the word of God is quick, and powerful, and sharper than any twoedged sword, piercing even to the dividing asunder of soul and spirit." The soul or material sense of men is indeed being pierced to its root in these days. But what wondrous comfort is there to be found in that same poem quoted above, where Mrs. Eddy confides to us a joyful promise:—

Dear God! how great, how good Thou art To heal humanity's sore heart; To probe the wound, then pour the balm—A life perfected, strong and calm.

Men need not be afraid at the approach of any new day or any new year, for the remedy is to be found in remembering that each year of this twentieth century is part of that "one hundred years, aflame with Love." The remedy is to be found in abiding steadfastly and scientifically in the understanding that unfolding eternity is all that is really going on. Year, decade, century, millennium, age, and the forever and ever are, in truth, simply other names for eternity, and thus man is partaking of the whole of everything real at this very moment. In just the same way this will be the fact on next New Year's Day and the next and the next after that, until all the New Year's Days of all the centuries to come merge into eternity, and the myth of a material year and mortal history utterly disappears.

But assuredly it is wise and profitable for mortals to contemplate quietly their present history. It is wise to view rightly the occurrences of the past and the promise of the new year, measuring it all by Principle and holding fast always to Truth in order that the real may not be lost in the midst of the tempestuousness, whether this storminess be apparent in an individual's life, in his nation's career, or in the human story of any other of his interests. Mrs. Eddy writes, "It is good to talk with our past hours, and learn what report they bear, and how they might have reported more spiritual growth. With each returning year, higher joys, holier aims, a purer peace and diviner energy, should freshen the fragrance of being" (Miscellaneous Writings, p. 330). Every individual may well ask himself, Where would I have been along the path of the demonstration of the true man had I overcome more of materialism, more of envy, jealousy, hate, selfishness, and lust in all its myriad phases, including the desire for power, place, and popularity? But these and all other untrue beliefs of mortal mind fade away before the understanding that Mind or God has made His image and likeness without a fault. There is no evil thing that has ever touched the man and woman created by Principle. It is this verity that is so comforting in this momentous twentieth century, this truth that, more and more comprehended in its incisive significance, is at work throughout the world. Because man is the idea of Mind and not corporeal, he has known and knows now only infinite good and harmony.

[From "A Religion for the New Day," by Charles F. Dole]

The world has suddenly developed a new science, new sources of almost infinite power, a new system of industry, world-wide complications of business and commerce, new problems difficult enough to swamp the mind that tries to imagine their outcome; the world just begins to wake up to the need of a real and practical religion, of such a religion as has never yet been largely known and practiced, of a religion adequate to fit such a crisis as this, and it finds itself with a current religion as helpless to meet its needs as if we were to try to use the old Mayflower for ocean travel. The world needed "preparedness," but not in steel or gold, in food and drink, in new chemical secrets, in enlarged forces of destruction. It wanted and must have a religion humane enough to match its great science, a religion rational enough to ally itself with its science, but, far more important, a religion vital enough to give a higher motive power than fear or warlike discipline or greed of gain or the hysteria of an inflated patriotism could ever give, for the counsels and conduct of mankind. . .

In most minds there is a haunting sense that there is something valid in religion, if we could only discover it. What is this valid substance of religion? There is no more important question in the field of knowledge than that upon which we now enter. No truthful mind can bear to delude itself with a pretense of religion or a show of argument to establish it, if it is not real. We have no merely academic question here. It is intensely practical; it bears on every issue of right or duty; it involves the secret of happiness, the

improvability of humanity, and the destiny of mankind. If there be nothing mighty and moving in religion, mankind loses its most precious asset. Worth would fall out of life, and worth is related to every social subject-to justice, democracy, civilization. What if man were only a somewhat more intellectual, hungry, lustful, and imperious beast? What then can you possibly make of conscience, duty, and ideals? A venturesome intelligence may perhaps enjoy for the moment the sense of freedom from all restraint that comes in the hazy doubt whether anything is real. But what if the mind has to accept blank negation as its answer to the riddle of existence? . . .

We love what we do not see in our friends. We call this reality behind the veil, which lights up the face with a smile, which is felt in the tones of the voice, the spirit. . . . Let no one say, then, that he does not believe in spirit. If any one says this, he probably means disembodied spirite, of which we do not need here to speak. . . . My point is that we know the reality of spirit in ourselves and in others. There is nothing human in us which we know so well. What would a man be without his intelligence—an invisible thing—his invisible conscience, his will, his love, his real inner self-all invisible? You love your mother; you love spirit. You love justice; you love spirit. You love your nation; you love a very complex spiritual idea. . . . You see the processes of death; you never see the death of the man's spirit. The more you know of its nature, the harder it is to think of it as dead. The intelligence of a Plato dead? The conscience of a Channing dead? The friendly will of a Wilberforce dead? The Christ-life dead? The terms never fit. There is not only no demonstration of death in such cases as these, but the impress of the facts of the spiritual life moves us the opposite way. . . .

Now, the spiritual life has its birth when this social consciousness, the inner feeling of self, as distinguished from any other mode of feeling-of self as related to other selveswakes up in us. This consciousness of self—the sense that I am-is one of the ultimate mysteries. Where can we possibly place it, except in the terms of the spirit? It is essential to life, and yet invisible and immeasurable-not a thing at all, and yet the most undeniable of facts.

[From The Fellow Worker, Published by Jordan Marsh Company, Boston, Massachusetts]

It throws a curious sidelight on human nature, that we set apart a particular season of the year for the expression of peace and good will. For what is the remainder of the year set apart? Facts seem to indicate that the majority of people prefer to live by strife and competition rather than by cooperative effort. Every intelligent person realizes we could live more happily, profitably, by mutual help and coop-

The competitive idea has so percolated the human mind that even our games and recreations are largely based upon it. We say this is good,—that it fits us physically and mentally for the battle of life. Why should life be a battle? Why should we make it a conflict instead of a concert?

["Labor and Production," by Dr. Hermann Schoop in Neue Schweizerische Zeitung, Published in Zurich, Switzerland]

How extensively the great problems of economic and social life on which the solution of the fate of the old world depends is occupying the thought in America, which to-day may verily be considered the storehouse and manufactory of the world, can nowhere be seen better than in the September

number of "The Annals of the American Academy of Political and Social Science." The entire magazine of 170 pages is given to the subject, "Labor, Management, and Production." Prominent scholars on all sides of economic life as well as the first students on social politics have added their opinion. . . .

Very American are the explanations on the subject, "Production and Preservation of the Spirit of Initiative." Here it is shown that the lust for power is degrading, a perversion of the philanthropic and necessary spirit which represents the initiative; and true initiative can never be called to life through financial temptation. The creative initiative strives for and desires responsibility in the great, universal work. And even in the most modest position the workingman can be filled with this zeal. . . .

Out of all the articles there speaks the best American spirit, whether they are written by representatives of employers or employees. The spirit of confidence in the good in man, the happy optimism which is not frightened before the most difficult tasks, but rather seeks the spirit of true brotherliness and real democracy,-which is above the difference of class and position and sees the need of others to whom a hand must be given in the construction of a better world,-this affirming American spirit, which looks confidently into the future, is called upon to help greatly in the social regeneration of mankind.

[From a Letter to the Editor of the Nevada State Journal, Reno, Nevada]

The district attorney in Los Angeles County, California, in a recent statement which appeared in your paper December 4, made it appear that the Christian Scientists of that locality are disobeying the law by not providing medical attendance for their children in cases of serious illness, whereas the California medical practice act exempts treatment by prayer and the practice of religion, which specifically means Christian Science, in the following language: "Nor shall this act be construed to regulate, prohibit, or apply to any kind of treatment by prayer, nor to interfere in any way with the practice of religion." From this it will be seen that parents are perfectly free to have Christian Science treatment for their children in case of illness if they think it best. I might add that most all the other states, thirty-three in all, have provisions similar to the above. This provision is so plain it could hardly be misconstrued, and it is difficult to see what excuse there is for this gentleman's sudden outburst, and his assertion that parents would be guilty of manslaughter in case they did not provide medical attendance for their children in cases of serious illness.

Most physicians are very reasonable in their claims and do not pretend to be always able to prevent children from dying in cases of sickness when they are called in. In many, many cases they sorrowfully realize their own helplessness. If parents had the positive assurance that their medicines or operations would heal, more would undoubtedly employ them. Parents, of course, do the very best they can for their children, and if in the exercise of their judgment they employ other than medical aid they are not to be condemned. Experience is usually a very good teacher, and most people that have Christian Science treatment have had it before. This gentleman would lead one to believe that Christian Science is the most foolish thing on earth, whereas millions testify to its efficacy as a healing and regenerating power. It is often appealed to, with the very best results, when all other remedies have failed. Prayer has lost none of its power to heal sin and sickness and even overcome death. It was used in the early centuries for this purpose. Why not to-day?

Christian Science is turning thought away from material remedies, which, to say the least, are uncertain in their effects on mankind, to the apprehension of spiritual truth, which heals just to the extent one understands and applies it. It would be a sad incident, indeed, if one, in case of illness, in this land of religious freedom, had to cast aside his religion-be denied the privilege of praying to God-and instead be forced against his will to apply material remedies. Judging Christian Science by its fruits, only through a serious misunderstanding of its teachings could one refer to it as "fanaticism or delusions." Mrs. Eddy, its Discoverer and Founder, was a very spiritually minded woman and was fully capable of leading the large movement to which Christian Science has grown. As to obeying the laws of our land, she says in her book, "The First Church of Christ, Scientist, and Miscellany" (p. 220): "I believe in obeying the laws of the land. I practise and teach this obedience, since justice is the moral signification of law. Injustice denotes the absence of law."

Religious persecution is the scourge of the ages. It retards the advancement of mankind. It takes away individual rights and liberties, and the one who indulges in it does so through ignorance of the laws of our land and the rights of humanity.

["False Beliefs About the Blind"-From The Christian Science Monitor]

There is sure to be widespread interest in the experiment about to be tried by the Massachusetts educational authorities having in charge the special education of some three thousand people ordinarily referred to as blind. Something distinctly novel appears in the attempt to place people of this sort in department stores as salesmen or saleswomen. But the authorities are confident that it can be done successfully, and they are finding many of the store managers quite ready to cooperate in the experiment, and almost equally confident of its successful outcome. The purpose of the whole undertaking, of course, is to open a wider opportunity for an industrious and earnest class in the community to become self-supporting, in place of being wholly or partially dependent upon the efforts of others.

But there is a much finer idea than this behind the undertaking. It is that everybody should get a better conception of this class of people, and break the habit of classifying them by wholesale as inevitably dependent and largely helpless, merely because of affection of sight which distinguishes them more or less from the human mass. The educators concerning themselves with this matter feel that the ordinary individual allows himself to think of what the world calls blindness as a vastly greater burden and impediment than it actually is. Such a person emphasizes it far more than the so-called blind themselves. He conceives of it as hampering, if not nullifying, the other four senses. But the people immediately affected do not dwell upon it in that way. In many cases, one might say, they do not think of it at all. Certainly they do not wish to be thought of as blind. It is such a conception of them by others that appears to them to be their limitation. Often one whom the world thinks of as blind has so developed the senses, other than sight, that his so-called blindness might fairly be said to have been, for him, not so much a hindrance as an advantage. That is to say, his sum total of capability is actually greater than that of many ordinary persons whose five senses are, to the ordinary view, complete.

It is a fuller understanding of these considerations that the Division of the Blind, of the Massachusetts Department of Education, is now bespeaking from the public. They want

the public to get away from its stereotyped notions on this subject. They want the public to be more open-minded upon it. They want the public to accept those of the class referred to, on their individual merits, without mentally pigeonholing them all as subjects of charity, or as capable of doing only a certain sort of simple and humdrum tasks. They want the public to realize that the people whose interests they are now urging represent a wide range of individual capability, with all the delicate shadings of traits, tastes, and experiences that can be found among an equal number of individuals anywhere. Then, it is believed, the public will deal with these people more fairly, because it will begin to accept them for what they really are instead of condemning them to comparative inactivity and dependency in advance, through the prevalence of what the authorities themselves now expose as a false belief.

There is a new hope, as there is a new conception, in this sort of official approach to such a problem. Yet the new method involves nothing fanciful. It is based on the careful study and experience of intensely practical, though deeply sympathetic, public boards. That it is not chimerical can be shown by countless individual experiences. One of these, easily authenticated at the Boston office of the Division of the Blind, is that of a man professionally trained in the law, whose connection with a local realty corporation threw in his way the duty of investigating a real estate title upon which depended an important business transaction. His firm, falling, for the moment, under the influence of the conventional popular belief, feared to trust him with the investigation. They placed it in the hands of an investigator equipped with all five senses, who, in due time, reported that the title could not be confirmed. The blind lawyer then asked, and obtained, permission to make the investigation. Taking with him only a reader, and depending wholly upon his own professional knowledge and training, he went over the case for himself. To the surprise of his employers, he succeeded, where his supposedly better equipped competitor had confessed failure. Presumably the employers of this man did not again hesitate to accept him on his true merits, instead of underrating him on the basis of their own false assumption concerning his sight. If the world will go even a little way in adopting this fairer attitude toward the blind, the practical help from such a better conception will outweigh all that can be done through mere gift-giving and sentiment. Here, at all events, the world must look behind the outward seeming, and know capable individuals, not for what they are not, but for what they really are.

[Basil Mathews, M.A., in "Essays on Vocation"]

A stream cannot, however, rise higher than its spring; and the general action of the English-speaking peoples abroad cannot be on a nobler level than that of their civilization at home. We cannot adopt and practice a Christian principle in relation to races of Africa and Asia that we do not ourselves hold and apply to the social conditions of our own cities and countryside. If we must not have tyranny in the Congo or in the Kameruns, we dare not have slums in Cardiff or Chicago. If white must not lord it over black, all the more must the white employer and employed arrive at industrial order in which justice is done and all men have a clear opportunity of developing to the full the lives that have been given to them to use. . . .

Such a commonwealth can only come, as Lord Bryce has declared, through "a change of heart in the peoples of the world." And such a change of heart can only emerge through

the sustained labor of a manifold moral leadership rooted in spiritual reality. We must have the will of God organized in the common life of all peoples, if we are not ultimately to have the will of Mammon driving all races over the precipice of greater wars into the abyss of barbarism. There is indeed only one standard so universal in its range, so complete as a solution of the evils that have oppressed man, that all races and every civilization can find in it a final and unifying aim that at once creates personal character, develops national strength, and gives power for united progress.

That standard is expressed in the program of the world kingdom of God. To state that issue thus is to divide all who face it into those who on the one hand believe that the Christian program has been tried and found wanting, and those who on the other hand hold that it "has been found difficult and not tried." These latter, who, with Matthew Arnold's "Scholar-Gypsy," are "still nursing the unconquerable hope," are then inevitably led to the decision that if we are to witness a world kingdom of God, men everywhere must take the whole message of that kingdom to the whole world.

[From The (New York) Tribune as Quoted in The Pioneer]

Agitation in favor of rigorous enforcement of regulations governing the sale of intoxicants and for additional measures of control, has been growing recently in Chile. A campaign has been started to make the Araucanian Indian Reserve of Cholchol dry, following a petition to the government from residents in the district alleging violations of the existing laws which prohibit the sale of alcoholic drinks on Sundays and feast days and by persons without license. Movements have also been started by workers in the nitrate and coal fields in favor of prohibiting the sale of liquor on pay days.

[From an Interview with Dr. Max Nordau, Well-Known Philosopher and Sociologist, in *The* (London, England) Observer]

"Consider knowledge. At first his [man's] questions were simple, his appetite for knowledge modest; almost any answer was sufficient. Whence came birds? From eggs. Good! Then he had to know who hatched the first bird. For a time he was satisfied with the answer that God created it by a mandate. But little by little knowledge increased and by leaps and bounds his curiosity waxed. How did God come into being? Of course, the first man who asked that question was properly stoned. But his breed did not die. Soon there were too many of him to stone. So answers had to be found. Some answered the question of the origin of the bird by talking about matter and its ways. But of what does matter consist? Of molecules. And molecules? Of atoms. Atoms of electrons. Electrons are centers of power. And what is power? 'Ah, one fool can ask more questions in one minute than wise men can answer in a year!' This is the modern stoning by the pious. But now it is not the pious but the questioners who dominate the age. . . .

"The principal tendency of life and desire is satisfaction, arrival. The principal process of life is change. Desires so simple that their attainment is simple are the heart of wisdom. Consider from what different sources comes agreement on this: The Bible says, 'Blessed are the poor in spirit.' Voltaire, arch-atheist, says the ripest wisdom is to cultivate a garden and grow cabbages. Tolstoyan philosophy advises you to renounce, to beware of ambition, to live simply. Folk-lore tells you of the king who looked for the shirt of the happiest man and when he found him he saw that there was no shirt; for the man was poor, hence happy. This concensus of opinion means something."

"Do you consider any particular race or nation in the lead of civilization?" I asked.

"No. Spiritual development is to be found in horizontal strata rather than inside national boundary lines. The East often expresses itself as superior to the materialism of the Western peoples. But there is sensuality and the luxury of the satraps in the Orient as characteristically as there are Yogis and Brahmin of undoubted piety. And there are Kants, Spinozas, Newtons, and Edisons living as sparely in the Occident and thinking as loftily as the Yogis; and there are profiteers among our neighbors here who live in as swinish materialism as do the satraps of the Orient; perhaps with less art."

"Then you don't see among the different nations any moral advance?"

"There will not be until morals mean the same things for nations as they do for individuals," he replied.

[Fraternal Interchange of Preachers and Speakers between Britain and America]

At the recent annual meeting of the English-Speaking Union, a good account was given of the work of the Council for the Interchange of Preachers and Speakers between Britain and America. The Council cooperates with three important religious bodies in the United States-the World Alliance of Christian Churches, the Federal Council of the Churches, and the Church Peace Union-and aims to unite in international efforts all organized religious forces in Britain. It endeavors to secure leading American preachers to occupy British pulpits, and vice versa, and acknowledged exponents of Christian and ethical ideals common to both countries to speak on public platforms. This year thirtyeight American preachers have figured in three hundred churches of different denominations, and a number of British preachers have rendered reciprocal service in the United States. These joint international efforts on behalf of peace and righteousness were never more needed than they are today. The whole work of the English-Speaking Union, whose aim is "to draw together in the bond of comradeship the English-speaking peoples of the world," is being prosecuted with great vigor, and its membership steadily grows on both sides of the Atlantic.

[Introduction to a Christian Science Lecture under the Auspices of Christian Science Society of the University of California]

I asked a young man the other day what was the greatest thing he had got from his education in the university. He answered that it was "inspiration for better things," and he added, "the ability to solve problems." It seems to me that these thoughts come to many of us as the most valuable things in our college training. Now probably the most fundamental factor in the attainment of these ends is the ability to think aright. Christian Science has rightly been called the Science of right thinking, and as such it has proved very helpful to college students. The purpose of the lecture to-night is to present the subject of Christian Science correctly and to bear testimony to the facts regarding the life and work of its Discoverer and Founder, Mary Baker Eddy.

Church Notices

* * *

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The

church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Teners.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Announcements

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size 8½" x 10¾". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to In-

tervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

New Morocco Bound Vest Pocket Edition of Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamplets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing." "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S. A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Letters of Appreciation

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

I WISH to thank THE CHRISTIAN SCIENCE MONITOR for bringing the interests and activities of the wide world right to the home. One does not have to travel to be well informed. Its pen pictures as well as beautiful prints of places and people enlarge our outlook, broaden the concept of our fellow men, and make us citizens of the world. Special pages devoted to art, books, and music as well as to many other subjects of interest are comprehensive and reliable. The editorials are impartial and impersonal, helping us to understand the great issues of the day. Its advertisements are truthful, designed to benefit both buyer and seller; the motive through every department is for constructive thinking and practical living. I am very thankful for a clean, wholesome newspaper for children, one all can enjoy and learn from every day.

NO one can speak too highly of THE CHRISTIAN SCIENCE MONITOR, for it gives to all, true news from every quarter of the globe. It is not insular or fearful; it does not cater to any race or party, but instead it is truly international; thus endearing itself to all people of all races. It is truthful, fearless, and forceful on all questions with an assurance that all must welcome.

ANY subject with which this paper deals is taken out of the "secret diplomacy" of error and put in the simple, fundamental light of Truth. I was recently impressed with this fact when looking over an article on "Anatomy in Art," in a back number, in which the simple fundamentals stated did away with much mental confusion in drawing. I have a very sincere appreciation of all our periodicals.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy \$6.00; twelve or more, each \$5.75. Large Type Edition, designed especially for the use of First Readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 8 by 10.4 inches. Single copy \$7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

FRENCH TRANSLATION. Alternate pages of English and French. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

German Translation. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Scntinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good. Rudimental Divine Science, No and Yes. Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

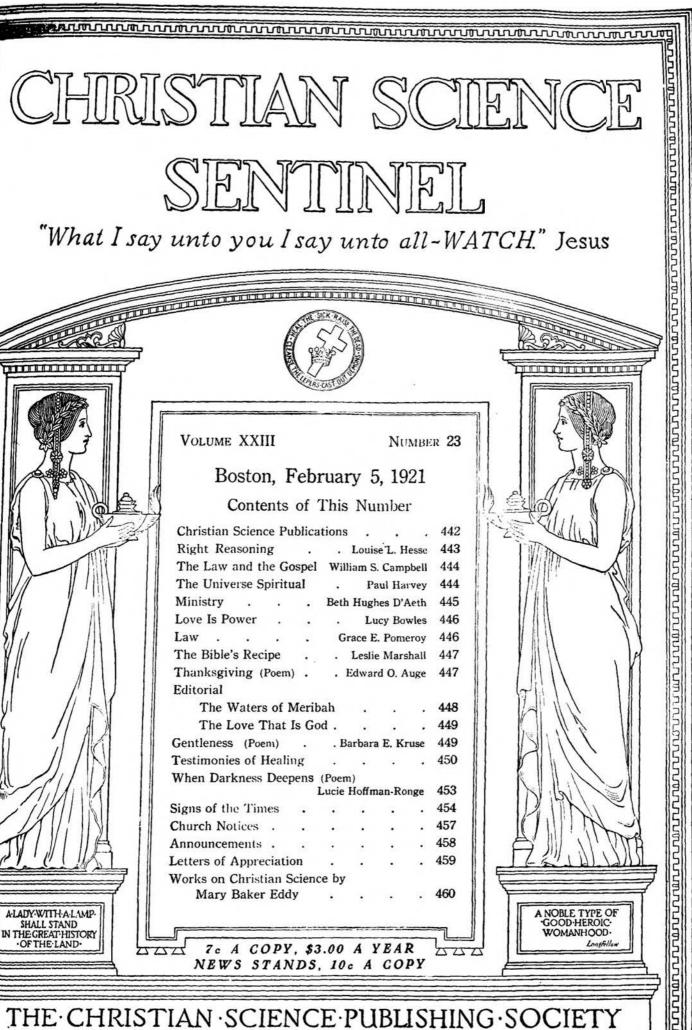

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

Miscellaneous

THE LIFE OF MARY BAKER EDDY-By Sibyl Wilbur. Cloth, \$2.50; edition de luxe, \$5.00.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. Paper, 15 cents. PERSONAL CONTAGION, also WHAT OUR LEADER SAYS—By Mary Baker Eddy. Special pamphlet, 10 cents.

WHAT OUR LEADER SAYS—By Mary Baker Eddy.
Vest pocket folder, 5-cents.

REPRINTS (not printed in English). Two-page leafets, 17 subjects in German, 14 in Swedish, 9 in French. Ten copies, 10 cents.

THE MOTHER CHURCH—By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated. Cloth, \$1.50.

trated. Cloth, \$1.50.
CHRISTIAN SCIENCE: ITS LEGAL STATUS—By Judge Clifford P. Smith. Paper, 15 cents.

LAW AND WORK for the blind. Printed in New York point, American Braille or English Braille, \$1.00.
SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission have been set to music as follows:

"The Mother's Evening Prayer," 75 cents.

"Christ, My Refuge," 75 cents.

"Love," 50 cents.

"Love," 50 cents.

Communion Hymn—"Saw Ye My Saviour?" (John-

Communion Hymn—"Saw Ye My son), 50 cents.
"Blest Christmas Morn," 37 cents. "Saw Ye My Saviour?" (John-

"O'er Waiting Harpstrings of the Mind," 37 cents.
"O'er Waiting Harpstrings of the Mind," 37 cents.
"Shepherd, Show Me How to Go," 37 cents.
"Saw Ye my Saviour?" (Root), 37 cents.
The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, \$1.15; half morocco, \$1.40; full morocco, \$4.50; levant, \$5.50; pocket edition, size 45%x63%, \$3.50.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, 8-inch (mount 12x16), \$1; 12-inch (mount 15x20), \$2; 16-inch (mount 21x29), \$3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS, AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese veilum, size 18x24 inches, \$5; on India paper without remarque, \$3.50. Smaller reproduction, size 11x14 inches, on Japanese veilum, \$1.25. Photogravure postcards of the Church Edifice and Publishing House,

BIBLES. 01483x. Clarendon Brevier, beavy-faced, dis-tinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.50.

01440x. Brevier, light-faced type, self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, \$7.25.

01683x. Large type Bible, 1034x8 inches, bound in Alaska scal. Specially adapted for use of second read-ers, \$16.50.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents.

Price List of Bible Concordances and Dictionaries of the English Language supplied on request.

Items such as leather covers for the QUARTERLY, and cases, either closed or open, for books, Sunday school supplies and other accessories, will be found in the current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

NUMBER 23

Right Reasoning

LOUISE L. HESSE

IN Isaiah we read, "Come now, and let us reason together, saith the Lord." Quite naturally one might ask, Of what does this reasoning consist? In the light of Christian Science, the verse takes on an added significance, and a fuller meaning than is usually attributed to it. In one dictionary the word reason, when used as a verb, is given the following definitions: "To argue; to debate; to discourse; to persuade by argument; as, to reason one into a belief or out of a plan." Ordinarily speaking, then, to reason is considered a mental task in which one so-called mind tries to convince another of the truth of a certain stand taken. The weaker is forced to accept the arguments put forth by the stronger, and not always is the result satisfactory to both parties. Yet the argument and debate go on, and the more unanswerable are the arguments which are brought forward, the more successful, of course, is the case on the one hand, and the more hopeless on the other.

In the light of Christian Science, however, which proves conclusively that there is one Mind, not many minds, the joy of reasoning together becomes plainly evident. Instead of reasoning against another person's concept of a situation, the Christian Scientist carries the whole matter into the realm of Mind, where perfect oneness is apparent. The starting point, that all causation is God, good, and that effect must therefore be good also, is so simple in its nature that there is no need to persuade, to argue, or to debate. God is, and it is not difficult to convince a hearer of the fact, for he must see that since man exists (which he will not gainsay) God, the cause of all, must have existed before him; and since creation would collapse without the infinite Mind to sustain it, God must be that Mind and must still exist "from everlasting to everlasting."

To the unenlightened these truths must be stated simply, confidently, and lovingly before they can be seen as true and applicable to everyday problems. To one unused to proving constantly that God's infinite power is ever operative, and that to feel the benefits of its operation one need only turn to God, some of the statements a Christian Scientist would be apt to make might seem improbable or even untrue. How carefully, then, should we take each step, sure that no statement is misunderstood, and that the listener does not feel that he is being forced to accept the Scientist's viewpoint merely because the latter displays a superior argumentative power. An advantage that is gained in any such manner is no advantage at all, for unless the listener can say with confidence: "Why, yes, that is true. I see now the reason for existence," we have not reasoned together in the true sense of the word. But when each step in our reasoning is acknowledged as being true and altogether in accord with the ideal that may have been glimpsed at rare moments of uplifted thought, our case is won. Such reasoning together is blessed by God, and results in happiness and increased spirituality for all concerned. True happiness, however, can result only when our reasoning ac-

knowledges God as infinite Mind, the one and only cause. When this is done, we lose all sense of mortal self, and our increased spirituality and better health attest the efficacy of our reasoning. On page 494 of the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "Reason, rightly directed, serves to correct the errors of corporeal sense." The understanding of God's presence is sure to mean true rejoicing.

In the years before taking up the study of Christian Science, the writer thought that the power of reasoning was very hard to obtain, and that only those who had taken courses in philosophy and logic could expect to be successful in its use. But the gradual unfoldment of Christian Science, with its absolute proof of each step logically following the step before it and preparing for that to follow, with its unswerving certainty of the relationship between cause and effect, has shown how simple is true reasoning, and how far we are from the truth when we think that it is a special accomplishment obtainable only by laboring through courses of logic. It is true that one must be willing to put forth an effort, must seek to know how this reasoning is done, but effort and the desire to know are the prerequisites for all accomplishment. Without doing our part we have no right to expect to be specially blessed with the gift of logical thinking. for unless we show a desire to know, how can God supply us with wisdom? Jesus said, "Seek, and ye shall find," and he surely meant just that. The word seek, according to Webster, means "to look for; to endeavor to find," and if we use the latter definition, Jesus' command means this: Endeavor to find, and ye shall find. Only when we make the necessary effort demanded in the first part of the command can we reap the blessing implied in the second, the finding of all that is good.

Peter remarked, "Of a truth I perceive that God is no respecter of persons," and when we realize the full significance of this statement, glorious possibilities are opened to each of us. In God's sight man's ability to reason correctly is unlimited, and all may reap the benefit of true thinking. No one need feel that he is incapable of grasping the fundamental truths of Christian Science, those truths which indeed make free, for all that is required is a willingness to endeavor to find. In referring to her struggle to work out the "problem of Mind-healing" Mrs. Eddy says, on page 109 of Science and Health: "For three years after my discovery, I sought the solution of this problem of Mind-healing, searched the Scriptures and read little else, kept aloof from society, and devoted time and energies to discovering a positive rule. The search was sweet, calm, and buoyant with hope, not selfish nor depressing. I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

We who have turned to Christian Science have the help of Mrs. Eddy's writings to make the way easier, and once we have expressed a desire to know how to reason rightly, what

Copyright, 1921, by The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Massachusetts. Entered at Boston post office as second-class matter. Acceptance for mailing at a special rate of postage provided for in section 1103, Act of October 3, 1917, authorized on July 11, 1918.

untold heights may we not attain! "Come now, and let us reason together," gaining thereby a true sense of the infinitude of God, and reaping the blessing of true logic, based on the, said: "They will maintain law and order, and cheerfully knowledge of God as cause and of man as effect.

The Law and the Gospel

WILLIAM S. CAMPBELL

WAITING upon the housetop at Joppa, Peter beheld a vision from which he learned a profound lesson-a lesson not to call common or unclean that upon which God had placed His blessing. Thenceforth Peter understood that the divine purpose included the Gentile as well as the Jew. In like manner we may learn that the purpose of divine Mind may become operative through the law as well as through the gospel.

The law of Peter's time was the Mosaic law. Given expression for the guidance of a primitive people, it had acquired through succeeding generations an accumulation of interpretations that rendered it ofttimes unjust and burdensome. The advent of the gospel began to correct these inconsistencies in the law. Jesus was continually charged with ignoring the law, but he showed that the gospel was not in conflict with the correct sense of the law, but was in conflict only with an illogical interpretation of it. Again and again when confronted with the letter of the law as being in opposition to the gospel he was teaching, he interpreted the law with a deeper meaning than the literal.

What is the moral signification of law? It is justice. Is not justice the aim and ultimate of law, civil as well as religious? As we reach the broader sense of the universality of God's plan and recall the events of history, we perceive that by means of law Truth has been expressed, more or less imperfectly, to be sure, down through the ages. Mrs. Eddy, on page 121 of "Miscellaneous Writings," has expressed the thought in these words: "Human tribunals, if just, borrow their sense of justice from the divine Principle thereof, which punishes the guilty, not the innocent." Her insistence upon obedience to civil law is familiar to all students of her writings. On page 219 of "The First Church of Christ, Scientist, and Miscellany" she writes: "I would not charge Christians with doubting the Bible record of our great Master's life of healing, since Christianity must be predicated of what Christ Jesus taught and did; but I do say that Christian Science cannot annul nor make void the laws of the land, since Christ, the great demonstrator of Christian Science, said, 'Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." And on the following page she says: "I believe in obeying the laws of the land. I practise and teach this obedience, since justice is the moral signification of law."

We, as Christian Scientists, have had to learn a lesson analogous to Peter's lesson—a lesson not to call common or unclean whatever lies outside the commonly accepted religious pale. The establishment of The Christian Science Monitor twelve years and more ago helped wonderfully in broadening the vision of students of Christian Science in this respect. It has led them to look for the manifestation of Truth, the expression of Principle, in all legitimate activities of modern living. It has aided them in recognizing that Christian Science is more than a denominational movement, that it is a world-wide means of establishing God's kingdom on earth. To accomplish this the necessity of upholding law and order, and the need of placing upon the statute books laws that shall approach more and more nearly to the demands of Principle must be recognized. Looking

into the future, and speaking of those who have a demonstrable comprehension of Christian Science, our Leader has await the certainty of ultimate perfection" (Science and Health, p. 97). As Christian Science is teaching and demonstrating the unity of Science and Christianity, so it is teaching and demonstrating the unity of law and gospel.

We pray for the coming of God's kingdom. We do this from the viewpoint that His kingdom is in truth already here. What must take place is a process of unfolding of the recognition that law is the expression of Principle, that as we discern Principle more and more clearly the unfolding view will approximate more and more closely the ideal, the divine, until it shall be apparent that "love is the fulfilling of the law." Then it will be realized that the law and the gospel concur, and the prophetic words concerning this unity will be understood.

The Universe Spiritual

PAUL HARVEY

'HE orthodox world has been in agreement upon the fact that God is infinite, that God is Spirit, and that infinite Spirit is the great First Cause. For orthodoxy to go on believing in an effect wholly unlike the one and only cause, namely, a material universe, or a material anything, is utterly to abandon logic and reason. The philosophers of the world have been equally illogical. They have generally recognized a great first mental cause. Plato spoke of a self-moving intelligence as the first cause, and Aristotle described the first cause as a self-knowing reason. Nevertheless the philosophers have ignored the fundamental premise of spiritual cause in believing in a world of matter as effect, regardless of the quality of the one great cause. Moses and the prophets caught glimpses of the truth that the great First Cause being infinite Spirit, creation or the universe must be wholly spiritual. This discernment by the prophets of one creator and one creation, Jesus of Nazareth through demonstration and teaching perfected to the full vision of the Christ, for practical daily living. Jesus proved that the reality with which he was surrounded was the infinite spiritual idea, because Spirit is all there is; this he demonstrated by turning water into wine, multiplying the loaves and fishes, walking on water, bringing the ship immediately to the other side of the lake, and by many other works which humanity calls miracles. Through such demonstrations Jesus steadfastly acknowledged that the entire universe is actually spiritual, not material. It remained, however, for Mary Baker Eddy to develop the Science of Christianity or pure reasoning based on the teachings of Jesus and to discover and state a rule for the practice of this Science on the one and only true basis of one creator and one creation.

Starting with the basic self-evident proposition of existence which can be proved by each one by the simple appeal to consciousness, Christian Science, as taught by Mrs. Eddy. proceeds step by step, in perfect order, through pure reasoning to proof. It reveals that all right reasoning must have as its premise the great fact proclaimed in the textbook of Christian Science, "Science and Health with Key to the Scriptures" (p. 468), that "all is infinite Mind and its infinite manifestation, for God is All-in-all." Since the eternal First Cause, God, Mind, Spirit, could not possibly create a supposititious opposite, the finite, the material, it is selfevident that the so-called finite, or material, has never been created and any claim of limitation or matter is nothing but the counterfeit of true creation. All that exists is Mind

72

and its idea, these two which are in reality one, the All-in-all. The true idea is the spiritual universe including man. Man, then, is understood to be here and now living, moving, and having his being in the one and only universe, the spiritual universe. Spirituality consequently is not something which comes into being; it is, and it is all there is. The demand upon each one is to recognize this truth; to acknowledge in every thought and in his living, the allness of Spirit, thus acknowledging God as All. This is scientific Christian practice, which deals only with one true, spiritual creation. This is the reality with which one invariably deals; to deal with supposition as a reality is not possible within the logic of Science. Mrs. Eddy makes this vividly clear in an important chapter in "Miscellaneous Writings," on the subject "One Cause and Effect." She writes on page 27: "Creation, evolution, or manifestation,-being in and of Spirit, Mind, and all that really is,-must be spiritual and mental. This is Science, and is susceptible of proof. But, say you, is a stone spiritual? To erring material sense, No! but to unerring spiritual sense, it is a small manifestation of Mind, a type of spiritual substance, 'the substance of things hoped for.' Mortals can know a stone as substance, only by first admitting that it is substantial. Take away the mortal sense of substance, and the stone itself would disappear, only to reappear in the spiritual sense thereof."

The reality of all things, then, is spiritual. Certainly the truth or idea of all reality, including the action or function thereof, is in Mind, quite apart from any limited concept which may have appeared to human sense. As Mrs. Eddy says on page 267 of Science and Health, "Every object in material thought will be destroyed, but the spiritual idea, whose substance is in Mind, is eternal." Only what the divine Mind knows is the reality of man, for generic man is the full reflection of the divine Mind, including all spiritual reality. It is no more scientific to say that something is nothing than to say that nothing is something. Christian Science is not a religion of denial but one of affirmation. More than unseeing matter, error, it reveals the truth to be in Mind in place of false belief appearing in the hypothetical human mind.

Right reasoning thus brings us squarely to the unreality of matter and of evil, which is seen to be but the supposititious opposite of God's spiritual creation. Having established that good is all, one knows that evil simply is not. Mortal mind, wholly supposititious, is merely the counterfeit of divine Mind, only a name indicating what Mind is not-mere belief. Since mortal mind is itself merely a counterfeit of real Mind, then any claim that it sees, hears, feels, tastes, and smells, is but the counterfeit of the spiritual faculties of real Mind. Any belief that man has a separate material selfhood which can vacillate between sickness and health, imperfection and perfection, must subside before the great fact that man is wholly spiritual. Likewise the false claim that man is living in the flesh is shown to be but a false belief of limitation, by the understanding that man is now immortal, the child of God. About every fact in the spiritual universe there may seem to be a wholly supposititious opposite belief. On page 60 of "Miscellaneous Writings" Mrs. Eddy says, "Every material belief hints the existence of spiritual reality; and if mortals are instructed in spiritual things, it will be seen that material belief, in all its manifestations, reversed, will be found the type and representative of verities priceless, eternal, and just at hand."

Thus it is that by reversal every supposition of matter can only serve to direct thought to the understanding of Truth. In the light of Christian Science understood, the false suggestion of fatigue is only counterfeiting the infinite strength of man which is flowing to him as continuously as light flows from the sun. What may seem to mortal mind to be overaction, inaction, or diseased action, is a lie, the infinitely right action going on throughout God's universe right where any mortal claim seems to be. Thus, the only true condition is of God, for God is All-in-all, one perfect cause, with just one perfect effect, the perfect spiritual universe, generic man.

Ministry

BETH HUGHES D'AETH

TN the fourth chapter of Luke we read: "And Simon's wife's I mother was taken with a great fever; and they besought him for her. And he stood over her, and rebuked the fever; and it left her: and immediately she arose and ministered unto them." Immediately! That word arrests the attention at once. There was no waiting to be quite sure whether any of the symptoms of the disease remained. Instead, "she arose and ministered unto them." When once the Christ, Truth, has been perceived, the general feeling is that of wanting to help others. Ministering love does not always mean a practitioner's office, or being a Reader in the church. It may be that the home, at present, is the sphere where the ministry will be of the greatest use, or perhaps the workshop; one's ministry may be the conscientious driving of a railway train, or work in an office, even though one may appear for a time to make no headway.

Each one is holding the power of ministry, now, at this moment, in his hands. We do not read that Peter's wife's mother made her friends wait on themselves while she went to the synagogue to offer praise, or even to her room where she might give thanks. She offered praise through her quiet courtesy. Choosing the more practical way, "she arose and ministered unto them," but who shall say what songs of gratitude filled her heart as she lovingly performed the little tasks that the moment required of her. This does not mean that if an enlarged field for labor presents itself we should hesitate and not be ready and willing to help gather in the harvest, for truly "the labourers are few;" but let us not overlook the seemingly small things, and let us remember the wise advice, "Whatsoever thy hand findeth to do, do it with thy might," through the mighty energy of divine Love.

There is a great opportunity for useful activity in the office of Reader in the church, for Mrs. Eddy says (Science and Health, p. 236): "Truth should emanate from the pulpit, but never be strangled there. A special privilege is vested in the ministry. How shall it be used? Sacredly, in the interests of humanity, not of sect." Turning away from the belief in human personality, each should know, as Jesus did when he read in the synagogue in Nazareth, "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." All true ministry has its origin in divine Love. As we faithfully check each unworthy thought as it arises, and leave unsaid the unloving word, we are ministering through expressing divine Love, thus fulfilling the two great commandments. And as surely as we give Love the foremost place in our labor, healing will follow, since "love is the fulfilling of the law."

Students of Christian Science know that Love is the source of all being; it reasonably follows that all true action, or ministry, is simply the reflecting of Love. This should be undertaken in a spirit of great humility and simplicity. Mrs.

Eddy gives us a keynote to the right way to minister in one of her hymns (Poems, p. 13):—

My prayer, some daily good to do To Thine, for Thee; An offering pure of Love, whereto God leadeth me.

Discouragement should not be allowed a place in one's thoughts because lack of opportunity seems to put in a claim. "They also serve who only stand and wait," is just as true in this period of advanced thought as it was when Milton penned the words. There may seem a time when actual and physical work is not required of us, but to see man as God's image, "and having done all, to stand" is surely ministry of the highest order.

Love Is Power

LUCY BOWLES

SCIENTIFICALLY understood, divine Love is expressed as power and unswerving lovalty to Truth. It is the as power and unswerving loyalty to Truth. It is the standard by which we are enabled to test our every thought and action, proving if the words of our mouth and meditations of our heart are being brought into strict obedience to the Christ and are acceptable to God. Christian Science teaches that if we would be happy and at peace here and now we must argue on the right side, and having caught even a glimpse of the truth of being, we are ready to indorse Mrs. Eddy's statement on page 452 of "Science and Health with Key to the Scriptures," where she says, "When the spiritual sense of Truth unfolds its harmonies, you take no risks in the policy of error." Mrs. Eddy says in "Christian Healing," (p. 10), "You are the attorney for the case, and will win or lose according to your plea." Should evil suggestion tempt us to think or speak unkindly of a brother, or should depression, discouragement, sorrow attempt to enter in, then as always it is the time to declare firmly and with conviction the allness of divine Mind, mentally asking, Is this thought in line with Principle, Love? Then as one listens for the "still small voice," the answer will assuredly be given and the obedient seeker be led into the path of righteousness and steadfast peace.

The answer to all problems is to be found in the Love which is God, the only power, presence, intelligence, and source of action; for there is no power opposed to omnipotence. Ever present Love cannot be separated from its expression. "Lo, I am with you alway" is literally true; for the Christ, Truth, is forever present, ever right there where error claims to be. Error has neither intelligence nor power, for God is the only intelligence, and only that which He knows about man and the universe is true; and that is all there is to know. Divine Love is Principle, the one government. Government is power expressed in action, the activity of good manifested as true law. Our Leader says (Retrospection and Introspection, p. 61): "Christian Science declares that sickness is a belief, a latent fear, made manifest on the body in different forms of fear or disease. This fear is formed unconsciously in the silent thought, as when you awaken from sleep and feel ill, experiencing the effect of a fear whose existence you do not realize; but if you fall asleep, actually conscious of the truth of Christian Science,—namely, that man's harmony is no more to be invaded than the rhythm of the universe,you cannot awake in fear or suffering of any sort." Realizing this truth, then, that "man's harmony is no more to be invaded than the rhythm of the universe," we can safely leave every circumstance in the care of our Father, divine Mind, trusting Him to supply the wisdom and guidance to enable us to be so conscious of His business that we shall seek first

"the kingdom of God, and his righteousness," thus helping in the world's great need of to-day to bring good amid the shadow of strife and false belief of limitations by spiritual understanding as taught in Christian Science; for surely this is the true constructive work which will help to build the church triumphant.

Law

GRACE E. POMEROY

IT is evident that, used in the sense of established rule, law means a power, an indispensable and indestructible force which operates throughout the entire universe and is reflected by all God's creation, from the smallest to the greatest. All things are subject to law. There is a law governing harmony in music. To give to a piece of music the correct interpretation, it is necessary to know the fundamental rules governing harmony, also the meaning of words and signs found throughout the selection. Then and only then can be brought out in concert the sense of perfection intended by the composer.

No mathematical problem can be solved without a knowledge and application of the underlying rules of mathematics. Are these rules material things? Do we gain any knowledge of them through the five senses? Are they for only a favored few or are they for any one who will take the time to comprehend and use them? There can be but one answer to that question. Then we must believe that there is a spiritual law underlying reality or our own spiritual being. Yes, there is such a law; and just in proportion as we understand and use this law shall we bring out the harmony of being. Our lives will begin to manifest the perfect concept of the creator, who fashioned man by the word of His power.

Grant that this law exists; then we naturally ask, "How may we get the understanding necessary for us to make use of it?" Two of the most common and necessary comforts of our home are water and light. If we had all the proper furnishings in our bathroom, all the taps in place, and the reservoir held an ample and unfailing supply of good water, yet through carelessness or ignorance the pipes were improperly laid, would our home have its normal and rightful supply of water? It would not. The same is applicable to light. If we read carefully the promises of Jesus we shall find that we may expect certain blessings if we comply with certain conditions. "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Now we can no more expect these blessings without fulfilling the conditions, than we can expect to solve a problem in arithmetic without applying the rule of mathematics to that particular problem. And just so will our electric globes be dark unless the wires are up and properly adjusted. Now when it is spiritual light we desire, the "abide in me" and "continue in my word" are our part, and when this is done, we can no more be deprived of light (spiritual) than our home can be in darkness while we have perfect connection with a powerful electric dynamo. This has been proved true by thousands of intelligent men and women during the last half century.

Looking at the average human life we are tempted to say, "Something is wrong." A man does not measure up to even our faulty human concept of what he was intended to be. Then where shall we look for a remedy? Look to the connection,—the "abide in me" and "continue in my

ti:

...

1.

:

11

77

word." But some will say, "How can we meet the requirements of our Savior?" "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." More conditions you say, and still vague. But, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." Take this verse with all the faith you possess, knowing that "prayer is the heart's sincere desire, uttered or unexpressed" (Hymnal, No. 88) and say, as did Jesus at the grave of Lazarus: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." And just so surely as there is a God, just so surely shall we receive light sufficient for the present moment. Then as we take this gratefully and use it, more will be given.

The Bible's Recipe

LESLIE MARSHALL

DESPITE the fact that the remedies of the old schools of medicine seem frequently to be temporarily effective, they never offer complete freedom from the fear that the socalled difficulty or disease may at some time return. Nor do they give relief from the delusion that man can be subject to any inharmony whatever. And though before becoming interested in Christian Science we continue to be dosed, or advised, often, as Dryden wrote, "the remedy is worse than the disease." Certainly there is no comfort in the fact that the very ones looked to by those depending upon material means for relief can never agree among themselves as to just what the remedies are. In the face of all this doubt and fear, how relieving it is to read Mary Baker Eddy's statement on page 406 of the Christian Science textbook, "Science and Health with Key to the Scriptures," that "the Bible contains the recipe for all healing." But we are not helped simply by reading and memorizing this. What we must do is to prove, as Mrs. Eddy did, that the statement is true. In the measure that this is done we demonstrate Christian Science and overcome any false sense of things.

It is helpful to note in the passage quoted that Mrs. Eddy does not say recipes but "recipe," and that she does not say healing disease or healing sin, but "all healing." In fact, in the same paragraph she says, "Sin and sickness are both healed by the same Principle." Mrs. Eddy knew and proved, and it is for all who would be Christian Scientists to prove also, that in reality, in Science, there is but one recipe for healing and that same recipe is presented in the Bible from Genesis to Revelation. Abraham and Moses tell us what it is. So do David, Daniel, and Job. It sings through every page of Isaiah and Ezekiel, while all the patriarchs that followed show it to us. The wise men of the East saw something of it and followed to where it was. And John the Baptist came preaching it. A little later Christ Jesus gave us of it immeasurably. In every word and deed he pointed to the true recipe for the solution of all so-called discord. He said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." At another time he said, "If the Son therefore shall make you free, ye shall be free indeed."

How evident it is, then, that the truth is the only recipe for all healing. But we must be alert to the subtle suggestion that we need to go to the Bible and Science and Health only in times of seeming difficulty, that we can then take from them some particular recipe for the trouble to be overcome. Attempting to use Mrs. Eddy's teachings as a palliative until we are pleased to think we are well again simply shuts us out from true progress in the understanding of

Christian Science. In fact, it shows lack of understanding of what Mrs. Eddy wrote and more particularly of her statement on page 495 of Science and Health, where she answers a question as to how one can progress most rapidly in Christian Science. She says there: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love."

We can be helped to understand why Mrs. Eddy said that "the Bible contains the recipe for all healing" by a careful study and right appreciation of the first tenet of Christian Science as given by Mrs. Eddy in the Manual of The Mother Church (p. 15), which reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." It is evident that if one wished to climb the Alps, and knew nothing of the way, he would engage a guide, but if he merely sat idly at the foot of a mountain, he could not possibly make any progress whatever, and the guide would be a guide in name only. It therefore is evident that if we really desire to progress in our understanding and demonstration of Christian Science we must study the Bible and its key, Science and Health, not only in times of seeming difficulties but at all times. These books contain "the recipe for all healing." It is for us to put into practice daily all that we learn; for "by their fruits ye shall know

[Written for the Sentinel]

Thanksgiving

EDWARD O. AUGE

THROUGH the rays of Love divine,
I thank Thee, Lord, true light doth shine;
Truth and Love are now my stay,
And watch and guide me all the way;
Praise to Him who heareth prayer,—
Blessings, blessings, everywhere!

I thank Thee for that peace of Mind That in Thee I always find,
More precious far than finest gold;
Thoughts of Love Thou dost unfold.
Gratitude is thinking good,
Knowing Truth my daily food.

Love divine will meet my need, With the bread of life will feed, Guide me o'er a thorny road, Lift from me my heavy load; When I call, my plea will hear. Perfect love has cast out fear.

Wisdom is my precious guide, Walking ever by my side; Length of days is at her right, At her left Truth comes to light,— Tree of life that maketh free, Bringing health and peace to me.

Lord, I thank Thee most of all, That I know both great and small Are the same before Thine eyes, All are one, bound by Love's ties,— Branches of the one true vine; Thou the Husbandman divine.

Now my thought is stayed on Thee,
Perfect peace Thou bast for me;
Here I find the things unseen,
Thou the staff on which I lean;
Worldly things I seek no more,
I thank Thee, Lord, for Love's great store.

The Waters of Meribah

THE human mind has a habit of fluctuating between selfconfidence and self-depreciation. The two extremes typify the strength and weakness of human nature, and are equally distant from an understanding of Principle. Principle itself has no concord with matter. It is divine Mind, and finds expression in all the ideas of this Mind. No one ever made this clearer, in its absolute and negative phases, than did Christ Jesus. He said, to his disciples, "Be ye therefore perfect, even as your Father which is in heaven is perfect," but he also said, to the Jews, "Ye are of your father the devil, and the lusts of your father ye will do." When the rich young man, conventionally and apparently harmlessly, addressed him as "Good Master," he sternly and incontinently repudiated the designation: "Why callest thou me good? there is none good but one, that is, God." Yet a little later, at the feast of tabernacles, he cried to the people assembled within the precincts of the temple itself: "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life."

It is scarcely to be wondered, therefore, that the Jews, that is to say the Judeans, materialistic and sensuous to their last fiber, and obsessed with the ideal of the Messiah as a second Joshua, should have been hopelessly unable to distinguish between the son of man, the son of the flesh, and the Son of God, or the Christ. Yet Christ Jesus had warned them, not only of the difference between Spirit and the flesh, but of the inseparability of Mind and its idea, God and the Christ. On the day when he had healed the paralytic man, he had told them, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise;" whilst, one winter time, at the feast of the dedication, he had roused them to fury by the six words, "I and my Father," really the Father, "are one." One, that is to say, as Mrs. Eddy points out on page 361 of Science and Health, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being." The Jews, in other words, were making the very mistake, in their blind and unconscious effort to reduce the Messiah to flesh and blood, that Moses made, when the Lord stood before him on the rock in Horeb, and he, taking his rod struck the rock so that "the water came out abundantly, and the congregation drank, and their beasts also."

Now though Christendom has read this story for centuries, it has never taken the lesson unto itself, and, as a consequence, it is still striking the rock in its own name, and still finding itself excluded from the promised land. Moses had led the people out of Egypt. He had seen the might of Principle demonstrated as no man had ever seen it before. Yet when he turned to Principle, in the hour of temptation in Horeb, and Principle revealed to him how the rock should yield water, as Christ Jesus was one day to be shown in the wilderness that the stones could be turned to bread, the very number and wonder of the demonstrations which had been vouch-safed to him seem to have united in filling him with self-confidence, instead of confidence in Principle, and he

yielded to the temptation as completely as Christ Jesus rejected it. "Hear now, ye rebels," he demanded of the people; "must we fetch you water out of this rock?"

The provocation was supreme. The people had been rescued from the taskmasters of Egypt, rescued from the hosts of Pharaoh at the Red Sea, fed and clothed in the desert, and yet they doubted and murmured. That was their surrender to the lusts of the flesh, but the surrender of Moses was, in its way, even more complete. Before him was this bare rock, a rock impervious to the demands, the imprecations, the petitions of men. But Moses had proved, again and again, and yet again, the power of the divine Mind over matter. As Mrs. Eddy writes, on page 200 of Science and Health, "Moses advanced a nation to the worship of God in Spirit instead of matter, and illustrated the grand human capacities of being bestowed by immortal Mind." Yet, on this occasion, with the Lord standing upon the very rock, to use the metaphor by which the Hebrew writer drove home the fact that Moses had consciously appealed to Principle and fortified himself with his understanding of Principle, he permitted his vanity to claim for him, before the people, the credit of the demonstration which he knew Principle alone was capable of making. But almost immediately the realization of what he had done, and of the consequences of it, came to Moses. "And the Lord spake unto Moses and Aaron, Because ye believed me not, to sanctify me in the eyes of the children of Israel, therefore ye shall not bring this congregation into the land which I have given them.'

It must be remembered that the Hebrew writer literally rioted in metaphor, and that the Hebrew teacher used fact or metaphor equally indifferently for the purpose of bringing home to his pupils the spiritual lessons he wished to inculcate. Then when the writer described the sun as turned to blood he never for a moment imagined that a strange nation, ignorant of his method, would one day insist upon taking this literally; nor was the teacher reading the story of the plagues obsessed with an admiration for the wonder-working powers of Moses; what he did see was the opportunity for graphically impressing on those listening to him the inevitable tendency of evil to overwhelm those who themselves rely upon it. All the same, the full meaning of the metaphor cannot possibly be grasped, nor can the spiritual deduction from the text be properly assimilated, until the innate distinction between the Hebrew Messiah and the Christ of the Christians is understood. "The Soul-inspired patriarchs," Mrs. Eddy writes. on page 308 of Science and Health, "heard the voice of Truth, and talked with God as consciously as man talks with man." But it required the demonstration of Jesus the Christ to bring about a more complete metaphysical realization of Principle. To-day, in the light of Christian Science, it is easy to see that every man's demonstration must be the overcoming of self. So long, then, as his consciousness is tinged with the belief that there is any reality or any power in the mortal, that there is any good but one, God, so long, and to that degree, is he . bound to exclude himself from the promised land.

"The kingdom of God," Christ Jesus said, "is within you." It is attained in the exact proportion in which a man realizes the truth about Principle sufficiently to demonstrate it. To that extent he enters the promised land. Obviously the man who strikes rocks in his own name, who believes in his personal power to work miracles, cannot enter it. For though it is a land flowing with milk and honey, it is a spiritual land, and not the land of the earth earthy, neither is its milk the milk of kine, nor its honey the honey of bees, but the milk is the milk of the word, and the honey the honey of divine harmony.

The Love That Is God

THROUGHOUT her writings Mrs. Eddy has shown the difference between Love as Principle and so-called love as human emotion or physical feeling. To any one who studies her works together with the Scriptures, it should be clear, therefore, that the spiritual reality and any suppositional counterfeit have nothing in common. One who attempts to write more about what has already been so thoroughly expressed might well have a feeling of temerity, were it not that the subject is indeed infinite and forever unfolding. Thus each one who expresses in any measure a true sense of this unfoldment is fulfilling the service required of him. The expression of the one loving, divine Principle shows itself, of course, in a multitude of ways, terms, and actions. Unfolding service is by no means limited to any set words or forms. Indeed, every word that actually presents the truth is loving, for it inspires and heals by replacing falsity with the goodness of God.

On page 465 of Science and Health Mrs. Eddy says, "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." Here is a sentence which every student of Christian Science must ponder over endlessly in order to prove constant progress in his understanding and practice of demonstrable metaphysics. The last word "Love" is the climax of the sentence, so that when one has discerned and realized with all humility what each one of the other words there imparts to him of absolute Deity, then he has little need to puzzle over the formulation of some human definition of divine Love, for he knows that infinite Love is illimitable, humanly indefinable. To define means ordinarily to limit. Hence Mrs. Eddy declares, on page 213 of Science and Health, "God, good, is self-existent and self-expressed, though indefinable as a whole."

It is easy enough to point out something of what divine Love is not, though to complete the process one would have to go through all the categories of supposititious mortal existence. Certainly insipid sentimentality, for instance, that is the concomitant of smugness and self-complacency, is not the quality of God. And yet it is impossible to think of any positively wrong quality without there being the positive right quality of the divine consciousness to replace such a spurious opposite. Hence infinite intelligence finds it ever sufficient to be boundlessly active, without possibility of destruction. This is the vitally loving self-sufficiency of the true I Am. The real man, as the expression of this one intelligence, this one IAM, rejoices in being the unlimited activity manifesting God.

The divine consciousness, in fact, shows itself loving by maintaining and sustaining man's existence as conscious action. It is a joy and an evidence of divine Love that man is able to know that he is conscious, or alive. Recognizing this, one is sure that causative consciousness exists. This existence is all that any one can prove. Nothing can truly be proved on the basis of the physical senses. When their seeming is reduced to nothingness, causative Mind manifesting itself is all that remains. It is enough; for what really is must be indestructible. Divine consciousness, indestructible, all, ever present, and forcefully knowing forever the unlimited harmony and variety of spiritual idea, may, of course, be called divine Love. Such a use of words is just one way of stating the truth that is as old and as new as the creator. It can be in no sense a formula to serve on any occasion as a substitute for the individual prayer of right reasoning which realizes continuous unfoldment. The real man loves God by being glad to be alive. This is the spiritual coexistence of divine Love and its idea.

In her Message for 1902 (p. 7) Mrs. Eddy says: "The Latin omni, which signifies all, used as an English prefix to the words potence, presence, science, signifies all-power, all-presence, all-science. Use these words to define God, and nothing is left to consciousness but Love, without beginning and without end, even the forever I AM, and All, than which there is naught else. Thus we have Scriptural authority for divine metaphysics-spiritual man and the universe coexistent with God. No other logical conclusion can be drawn from the premises, and no other scientific proposition can be Christianly entertained." This passage is simply one of many in which Mrs. Eddy explains with vigor her use of the word "Love" as a name for God, and differentiates it once and for all from mortal emotionalism. Each seeker can comprehend and appreciate the sufficiency of her explanations only through study that is untiring in its consecration.

The fact that the infinitely loving consciousness, which is God, is always here and now is ever present help. The real man can never for an instant become unconscious of good. Even if a man, turning to and relying on divine Principle, seems to come to dire straits, he is bound to find spiritual consciousness there as everywhere. Where the mirage of error presents itself, there is the solid reality of divine Love. Evil, whether sickness, or sin, or lack, or confusion, always suggests itself as a consciousness of something. Since there is but one true consciousness, however, into which evil has never penetrated, this consciousness of good is omnipresent to reject any utterly supposititious consciousness of necessity for trouble. Indeed, the one true consciousness, which is divine Love, is the only place there really is. Here man, in the image and likeness of God, lives and moves and has his being. So the illusory consciousness which claims to be hell is dissolved in the presence of the Mind which is heaven. As the psalmist says, "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." And on pages 149 and 150 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy gives us the same positive assurance: "Remember, thou canst be brought into no condition, be it ever so severe, where Love has not been before thee and where its tender lesson is not awaiting thee. Therefore despair not nor murmur, for that which seeketh to save, to heal, and to deliver, will guide thee, if thou seekest this guidance." GUSTAVUS S. PAINE.

[Written for the Sentinel]

Gentleness

BARBARA E. KRUSE

SPEAK gently; every kindly word The multitude will feed. The heavenly manna from above Comes through each loving deed.

Think gently; loving thoughts are seeds
That propagate and grow;
The famished world is waiting now
For you the seed to sow.

Act gently; quiet manners show Inward thoughts expressed; By quiet waters, pure and still, You will find your peaceful rest.

Testimonies of Healing

As a result of the evacuation of Cambrai during the German invasion, I was obliged to work in an American dressmaking establishment, a work to which I was not accustomed and for which I believed I was not strong enough. While there I suffered from an internal trouble of a serious nature which prevented me from walking in an erect position, and I could not endure the wearing of shoes. This condition continued after my marriage. I consulted four doctors and they all declared an operation to be necessary, but my husband was opposed to it. About this time I received a call to go to Switzerland to see a sick relative who was under Christian Science treatment. There I met a Christian Science practitioner, who consented to treat me. At the end of thirteen days I was entirely free, completely healed.

Christian Science not only heals the sick, but it is the truth, the understanding of which leads to eternal life. My desire is so to live that my life will express my gratitude to Mrs. Eddy for her work for mankind, and that I may be able to help others receive the benefits of this precious teaching.—(Mrs.) Paulette Crombac, Besancon (Doubs), France.

I can testify to the complete healing of my wife through Christian Science, although the verdict of the doctors left no other hope but through an operation. Up to this time I had had no knowledge of Christian Science. I am deeply grateful for this healing.—Antoine Crombac.

4

After being in bed for some time, then in a wheel chair, and later in bed again for over a year, during which time six doctors treated me, I at last turned to Christian Science for healing. I shall never forget the wonderful sense of peace that came to me, and when I was able to sleep once more I thought heaven was indeed at hand. I have been healed of numerous other complaints, including bowel and stomach trouble that caused me twelve years of agony. My husband and daughter have also had many wonderful healings, some of which were the overcoming of stomach trouble, colds, biliousness, and a badly festered finger. The healing of the finger was complete in a comparatively short time, and the nail did not come off. We are so thankful to God for revealing the truth of being to Mrs. Eddy, and that she in turn could give it to the world. I wish to thank all who have in any way helped me to understand the truth that makes us free, for a larger understanding of which I am striving.

(Mrs.) Marion Meacham, Norwalk, Ohio.

4

In gratitude to God, to Mrs. Eddy, and to those who have so patiently and kindly helped me I give my testimony. Christian Science was brought to my attention by a young student friend, but I did not look into it until a few months later when I turned to it as a last resort. I had never been well or strong and an operation had left me in a worse state than ever. I took up the study of Christian Science and visited a practitioner. There has seemed to be a great deal of uphill work and sometimes discouragement, but I realize now that this was a period of reconstruction and that my thinking was being transformed.

Confidence has in a large measure replaced timidity and fear; patience is replacing impatience and irritability, and love is becoming more apparent than criticism. A general all-round awakening to the allness of God has taken place. Health and strength have improved as I have grown in understanding of the truth, and have put

it into practice. I have also been completely healed of indigestion and constipation. I had experienced these difficulties all my life and was gradually growing worse, until I was afraid to eat anything except certain kinds of food, and had taken a great deal of medicine without any real benefit. Now I can eat anything and whereas at the time I began the study of Christian Science I could do very little of any kind of work, I now do all our housework easily and comfortably. I could not begin to tell all that Christian Science has done for me, but I know the same blessings are for all. God has not excluded any one.

I am thankful for the healing streams of Love and Truth expressed through the periodicals, Lesson-Sermons, and hymns.

MRS. VICTOR A. FRANCIS, Providence, Rhode Island.

4

Having had so many blessings through Christian Science I feel it my duty to make it known, that it may be the means of helping some one else. When I first heard of this great truth I was a sufferer from rheumatism. I was cured in one night by reading "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I have also been cured of the tobacco habit, having been a smoker from boyhood. The desire for tobacco left me about twelve years ago, and has not returned. I had often tried to break the habit but could not until I learned something of this great truth—Christian Science.

Through the application of the truth I have been cured of carbuncles. We cannot fail to receive the blessing, if we ask not amiss. I send this testimony trusting it will help some other sufferer.

JOHN COLTEN, Lowell, Massachusetts.

+

My husband and I began the study of Christian Science nearly four years ago and since that time it has met our every need. Not only physical ills but all the problems of everyday life have been met through the understanding of this beautiful truth.

It was very wonderful to us when we first realized that God's law—or rule—is ever operative for good and only good, and that, as Mrs. Eddy tells us in "Science and Health with Key to the Scriptures" (p. 3), "His work is done, and we have only to avail ourselves of God's rule in order to receive His blessing, which enables us to work out our own salvation," thus showing that each of us has his own work to do. Jesus said, "Seek, and ye shall find,"-and I have found that as I obeyed,—seeking a better understanding of Truth and striving to reflect more of that Mind "which was also in Christ Jesus," that demonstrations have naturally followed. I am particularly grateful for the new and better understanding of God and His creation which Christian Science has given us. Mrs. Eddy's definition of angels as "God's thoughts passing to man; spiritual intuitions, pure and perfect; the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality" (Science and Health, p. 581), is a constant comfort. In this light we can readily understand and feel their power to protect and guide us and to supply our daily needs. It gives new meaning, full of love and protection, to the following words of the ninety-first psalm: "For he shall give his angels charge over thee, to keep thee in all thy ways.'

One of many demonstrations for which I am deeply grateful was the harmonious birth of our baby girl. The same experience under material laws, a few years before, was attended by many discordant conditions and the doctor then

by health ed there is an kind without there is a could do to the first in the could do the could do to the first in the could do to the could do to the could do to the could do to the could do to the could do to the could do the could do to the could do to the could do to the

said that I could not live through the ordeal again. The understanding which has enabled me to prove these laws powerless and so prove God's omnipresent care, I owe to Christian Science. To God, to our dear Leader, Mrs. Eddy, and to all who have helped me in this study I am deeply grateful, and especially so for the wonderful happiness and harmony which Christian Science has brought to our home, and the practical understanding of God and His power which this study has brought to us and will bring to all who seek "first the kingdom of God, and his righteousness."

(Mrs.) MARY E. BISHOP, San Rafael, California.

4

I feel it my duty to bear testimony to the redemptive power of Truth understood, as revealed in Christian Science. Three years ago, after an enforced year's idleness as the result of typhoid fever, I found myself still in very poor health. I was also much depressed mentally for, at the age of eighteen, I was too far behind in my college course to think of continuing. The doctor whom I consulted at that time warned me not to work more than three hours a day, so I turned to music, a branch of art which had always been a solace to me, and began to study that. However, I soon became ill again and had to leave the town where I was then staying and go to a mountain winter resort.

Whilst in that town I sought earnestly for a church that would satisfy my hungry craving for a religion which would teach me the why and wherefore of life. Each Sunday I would visit a different church, and I had attended the services of a number of denominations without any having appealed to me, when one Sunday, thanks to the casual remark of a friend, coinciding with oft repeated advice from my dear mother, I wended my way to the Christian Science church. A strange sensation of calm came over me during that hour, and I afterwards realized that for a large part of that Sunday I was freed from the obsession of war and its attendant horrors, which had been continually haunting me.

Shortly after this I left town, and a month later, when I was taking the mountain cure, I received from a friend two pamphlets briefly setting forth some of the principal points in Christian Science. The reading of these did me so much good mentally that I immediately sent to the nearest reading room for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I smile to myself now when I reeall that I at first sent that most wonderful of books back unopened, giving as my reason that the price was too high. Fortunately the librarian let me know that there was a less expensive edition to be had, and I sent for one thankfully. I now realize that the value of Science and Health is above all price.

My progress has been seemingly slow. I was unfortunately carried away with the letter of Christian Science without having grasped the spirit. Six months later I was laid up with influenza and turned to materia medica. This was two years ago, and it was the last time I consulted a doctor. Since then, with the help of a practitioner, fear of living in the plains at low altitude has been overcome; also constipation. Together with these healings came freedom from extreme self-consciousness and its invariable accompaniments, timidity and worry.

About seven months ago it became clear to me that on account of finances I should not continue the study of music. I seemed to have taken a rash step, as I gave up one line of work without having any other line defined. At first I was able to be useful to a relative who was very lonely; then again I was wanted at home for a time. Some-

times my position was very trying, as my "not making a decision," as my family put it, was much criticized. At times I became discouraged and an old feeling of wishing to die would come over me periodically, but through thick and thin I managed to hold on to the fact that any decision, that might seem mine to make, existed already in Mind. On the morning of the day when I was to leave the home of my cousin, and when I was seemingly "at the end of my tether," a letter came offering me a post as teacher of the English language, and I now find myself filling a congenial position among friendly people and in harmonious surroundings.

Christian Science has done more for me than I can possibly relate. Thanks to the daily Lesson-Sermon I am able to go through the day knowing that Truth is continually sustaining me. My gratitude to Mrs. Eddy for having revealed the truth to mankind is unbounded. In teaching I find it invaluable to remember that all knowledge is in Mind, and my one aim is to try and demonstrate more of the truth each day. Time and again a demonstrable knowledge of divine Principle has been of great help to me, when traveling, when alone far from home, and when among strangers. I have at times awakened at night with severe headaches, which were quickly overcome through a little earnest study of our textbook, as was a tendency to nausea at mealtimes. I am truly grateful for Christian Science.

SERGE DE MORSIER, Lucerne, Switzerland.

*

Since gratitude is one of the first requisites in the demonstration of Christian Science, I feel impelled to give thanks, through one of our periodicals, for the many blessings received through this wonderful truth. For nearly ten years it has been my only physician and has met every need. I have found from experience that there is no problem too difficult, no sickness, so called, too malignant for solution or healing, when the truth is correctly applied.

It was while I was studying in a foreign country that Christian Science was first presented to me, by a friend who invited me to attend a Wednesday evening meeting. I went with her, but in a critical state of thought; consequently I came away with the belief that the testimonies of healing, many of them wonderful, were absolute falsehoods or imagination. When my friend later lent me a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I, out of courtesy to her, casually perused the book and returned it to her, with the remark that there was nothing new in it; I had learned all of that in a denominational church. Some years later, when I saw a loved one healed through Christian Science of a claim of many years' standing, which had baffled physicians from coast to coast, I decided to find out what it was, and thereupon began to study For any who may be finding it a seeming struggle, however, I will say that it was at least a year before I began to grasp the real import of the truth therein; but I would not allow the greatest of all errors, discouragement, to thwart me. I determined to know, and most certainly that true desire was rewarded by a beautiful, if slow, unfoldment of the truth. I have been grateful because it was slow, for I believe it took deeper root.

Since gaining some understanding, many things have been overcome; glasses, which I had worn from childhood and which the oculists had said would have to be worn always, were laid aside, and sick headaches, which were supposed to be hereditary, have been healed, proving the error of belief in man-made laws. Problems have been met

which, in the old thought, would have seemed insurmountable, and my heart overflows with gratitude to-day for the privilege of living in the age when this wonderful truth was brought to enrich the lives of all mankind.

(Mrs.) METTA LEGLER JUNKIN, Chicago, Illinois.

4

Every testimony of true healing is helpful to some one; therefore I should like to give mine. No one could have been more prejudiced (I say it with regret) against Christian Science than I, and though loving friends who were studying tried at different times to help me, I wandered in the dark for many years, bound by an old, deep-rooted material sense of life. I considered Christian Science one of the "isms" against which we were warned in the denominational churches, and I was prejudiced against Mary Baker Eddy, its Discoverer and Founder. From time to time I learned from friends of healings that I knew must be true; still I took no steps in the right direction. I know now how greatly I needed Christian Science, for I was ill in mind and body.

My experience proves that divine Love leads us even when we are heedless and seemingly unworthy. I started with a dear relative to attend a Christian Science church in a California city, which seemed to me to be the very place for us. We attended all the Wednesday evening testimony meetings and heard some of the most wonderful testimonies. It was our first opportunity to attend church regularly. We both began the study of Christian Science and were able to demonstrate a little. Then we could not let go even if we had wished to do so. I began to see that Mrs. Eddy was an unselfish and very spiritual woman or she could not have done what she has for the world. She deserves the gratitude of all mankind and is receiving it from those who have eyes to see. I am grateful for a knowledge of the truth, and to Mary Baker Eddy for her love for humanity. I am grateful for the great privilege of attending the church services and for the fact that so many of those dear to me have come into a knowledge of Christian Science.

I have been healed of constipation and other ills, head-aches, nervousness, and dyspepsia, after suffering from them for nearly thirty years. I have found Christian Science a preventive as well as curative and since gaining more understanding I have not only been able to overcome many of the smaller ailments, and all conscious fear of disease, but to keep well. Christian Science is indeed the promised Comforter that solves all our problems and makes us every whit whole.—(Mrs.) G. Abrams, Vallejo, California.

I have felt for some time that I should acknowledge some of the many healings I have had in Christian Science, that some one might be helped as the testimonies in the Sentinel have helped and cheered me many times. Since childhood I had suffered from sick headaches which each year became more frequent and severe. I consulted doctors of various schools, who gave me medicine that helped to ward them off, but when they came nothing would give relief for about sixty hours but a hypodermic. I had several apparent healings but did not get entire freedom from the attacks. I also had an internal growth which the doctors said might lie dormant for years, and there was nothing which they could do. While being treated by a Christian Science practitioner for the headaches, the growth as well as the headaches disappeared, although I had not spoken of it to the practitioner.

In 1904 one of the family was sick and called a doc-

tor. I asked him to look at one of my eyes which at times became momentarily blind. He examined it and said, Sometime you will have to have an operation, but don't think about it or tell any one." I have not had an operation and my eyes are all right, and I have never worn glasses. I know it was Christian Science and reading "Science and Health with Key to the Scriptures" by Mrs. Eddy that healed them. I have also been healed of pneumonia, severe colds, a dislocated knee, gallstones, and acute indigestion. I am so grateful to Mrs. Eddy and to the practitioners who have helped me and have been so kind and patient with me. My desire is for more understanding more love. I read the Lesson-Sermon each day, and have the Scatinal and nearly all of Mrs. Eddy's works, for which I am truly grateful.

(Mrs.) Mary W. King, Hillsboro, New Hampshire.

Eight years ago, when I first heard of Christian Science, I was a nervous wreck, suffering from constant depression, palpitation, sleeplessness, and great fear for myself and for my children. I was always tired and very irritable, and used to have fits of trembling, at which times I did not seem to have control over my body. A friend told me of Christian Science, and gave me Christian Science literature to read. I saw a practitioner, and after a few visits to her all this night-mare completely vanished and has never returned.

I also wish to express sincere gratitude for God's protection of my two boys while they were in the army, one of whom was a dispatch rider in France for over three years. In one of his letters to me he wrote, "I do not understand very much of Christian Science, but I am grateful for all it has done for you and daddy; I gladly own it has worked wonders." I am very grateful to God, and to Mrs. Eddy for giving us an understanding of Him and of the Bible, and to all the kind friends who have so lovingly helped me.

(Mrs.) EDITH WRIGHT, Redland, Bristol, England.

٠

I am deeply grateful for all that Christian Science has done for me, both mentally and physically. I am thankful for a knowledge of God as infinite Love and for a changed outlook on life, also for many physical healings and that I am a healthy, happy woman. I have been healed of eczema. A London specialist told me it was incurable, that it could be relieved but would reappear from time to time. Of this I was healed in a few days through Christian Science tradement. I have also had a beautiful healing of goiter. This healing was somewhat slower, three or four months elapsing before it was complete. For these blessings and for the better understanding of God I am truly grateful.

(Mrs.) CHARLOTTE DAY, Johannesburg, South Africa.

I have been studying Christian Science about fourteen years and feel I should no longer delay sending in my testimony. I was led to this study by the wonderful healing of two nieces. I had ridiculed it,—or rather, my conception of it,—but had not studied it very long before I was fully convinced it is the pure religion taught, practiced, and demonstrated by Jesus Christ, and later recognized it as the "Comforter" or "Holy Ghost" which he said the Father would send in his name.

I had always loved to read the Bible, and studied it for very many years, but much of it I could not understand until I got Mrs. Eddy's spiritual interpretation of it through "Science and Health with Key to the Scriptures," which has illumined it for me—especially that wonderful eighth

chapter of Romans. Critics say Christian Science does not agree with the Bible. To me they agree perfectly, and since taking up the study I have never doubted for an instant that Mrs. Eddy was divinely inspired to give this truth to the world.

My first healing was of bladder trouble of over thirty years' duration. One treatment overcame all pain, and cured minor ills at the same time. Later I fractured a rib, which was healed by two absent treatments. I had two falls on basement stairs—one on my back, hurting my spine, the other by falling forward on a stone step, which resulted in two abrasions of the skin, but my declaration of the truth healed both at once. I accidentally poured boiling water over my arm, from above the elbow to the finger tips; it stung as it touched the skin, but it did not even turn it pink, and pain was overcome instantly. Before coming into Science I suffered many years from cracks in my fingers, losing some of the nails. I was treated by several physicians, and spent some time at a health resort, getting only temporary relief. A Christian Scientist friend, a practitioner, called one day and I showed her my fingers, that were badly cracked and very painful, and asked for help. In two days they were perfectly healed. Nearly ten years ago I fell headlong down a stairway and broke two bones of my leg several inches above the ankle. My relatives being opposed to Christian Science, surgeons were called to put on a plaster cast and I was taken to my daughter's home, where I remained for fourteen weeks. I did not suffer pain, but could not stand an instant on my feet without using two crutches. I then called in a Christian Science practitioner, and after one treatment I was able to walk around the room, and three days afterwards went to my own home and began house cleaning.

Severe headaches which had tortured me since my girlhood suddenly left me soon after I took up the study of Science. I have had many other healings, some of which seemed wonderful. It is such a comfort to realize that no matter how or where I may be placed I always have the care of divine Love.

I could not get along without the Sentinel. All of its articles are so helpful to me, and I hope my testimony will benefit some one. I am so grateful for help from Christian Science friends, and to Mrs. Eddy for her wonderful gift to mankind.

(Mrs.) Amelia J. Harbin, Waterloo, Iowa.

With gratitude to the revered Leader of the Christian Science movement, Mary Baker Eddy, for her unselfed labor for humanity, I give my testimony of benefits received. In a very indifferent and critical mood I attended a lecture on Christian Science in September, 1900, through which I learned that Christian Scientists had something that I did not have, and in order to learn what this "something" is I purchased a copy of our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which, in connection with the Bible, I began to study. As a result of this study conditions in everyday living changed for the better. A business venture which had been a failure a few years before was again undertaken, with very limited capital, and was very successful. After some years I became sick with all the symptoms of typhoid malaria, followed by extreme nervousness. A practitioner was called upon for help and absent treatments were lovingly given. The healing was slow, but this had its advantages, for faults of long standing began to disappear, giving place to the truth, peace, and contentment.

I am grateful for membership in The Mother Church, for all of Mrs. Eddy's writings, and for the periodicals, daily, weekly, and monthly.—(Mrs.) Sophie Hassinger Lauffer, Plymouth, Michigan.

Words can only express a minute part of the gratitude I owe for what Christian Science has done and is doing for me. For about four years after I began the study of Christian Science, my home did not seem at all desirable to me. I tried to work out this problem, expecting all the time to be delivered from my surroundings, as I believed that this was not my right place. Still the way did not open. When I was discussing this with a friend one day she turned my attention to Mrs. Eddy's words: "Pilgrim on earth, thy home is heaven; stranger, thou art the guest of God" (Science and Health, p. 254), and said that I was in my right place in Truth, and if it seemed otherwise it was just my concept of home that needed purifying.

After this I set to work and endeavored to know that as a child of God it was impossible for me to be anywhere but in heaven as defined by Mrs. Eddy: "Harmony; the reign of Spirit; government by divine Principle; spirituality; bliss; the atmosphere of Soul" (Science and Health, p. 587). Then I saw that the demonstration had to be made in God's way. The change did not take place immediately, but gradually my whole outlook was changed. My home has become more harmonious in every way and I have no desire at all to leave it; in fact I am just loving it more each day.

Since quite a child I suffered from a weakness of the spine, accompanied by great pain at times, and I was told by a medical practitioner that if this continued to trouble me it would probably result in years of confinement to my bed. Upon his advice I underwent a long course of medical treatment, but received no relief whatever. Since coming into Christian Science the pain has entirely left me. Last summer whilst spending my holidays with a friend I was taken suddenly ill and became delirious. My friend, who had not been in Science very long, has since told me that she read Science and Health to me for some time without the slightest effect. She became rather fearful, and then remembered that I had often expressed my appreciation of the twenty-third psalm as interpreted by Mrs. Eddy on page 578 of Science and Health, and she began to repeat it aloud. When she repeated, "[Love] maketh me to lie down in green pastures: [Love] leadeth me beside the still waters," these words remained in my thought and something of the truth of their meaning as taught in Christian Science flashed through my consciousness and I became quite calm; then I must have fallen asleep. A few hours later I awoke perfectly well. I have proved many, many times that the truth as taught in Christian Science is the only Comforter.

In conclusion I must say how very grateful I am for the Christian Science periodicals; they never fail to bring the message that one most needs at the time.

(Miss) Marie Ross, London, England.

Signs of the Times

["Who Told Thee?"-The Christian Science Monitor, Boston, U.S.A., Dec. 10, 1920]

One of the most creditable qualities that is generally conceded Christian Scientists is their ability to give a reason for their convictions, to explain intelligently why they are adherents of this truth. They have been called thinkers, and rightly so,—and the obviousness of this very fact has attracted many people to investigate the cause of this striking contrast to the average religious followers of the past and present, considering them as a whole.

A man is of little value to a political, religious, or any other party, who can give no other reason for his support than the fact that his father before him was a supporter of that party, or that from his observations his party is the popular party, the largest organized body, and, consequently, the party of the majority and for that reason in his opinion the right one. No matter how many followers of this type, their presence, their subscription, their intended support has no real or substantial value. Too often, in fact, has history proved that the momentum of a movement gained by sheer popularity has been fatal to the movement. To be a worthy constituent a man must know the underlying aims of his party, he must believe in them, and he must practice them. Thoughtfully indeed did Mrs. Eddy, the Discoverer and Founder of Christian Science, say in the Preface of her textbook, "Science and Health with Key to the Scriptures" (p. vii), when presenting this Science of true Christianity to the world: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away. Ignorance of God is no longer the stepping-stone to faith. The only guarantee of obedience is a right apprehension of Him whom to know aright is Life eternal. Though empires fall, 'the Lord shall reign forever."

It is impossible for any one with unbiased, honest thought to peruse the pages of the Christian Science textbook without seeing with unmistakable clarity the necessity for individual and incisive thinking, the necessity for qualifying one's self to prove beyond doubt the absolute and unalterable truth of this Science. It is essential that a person so equip himself in order to be a real supporter of any cause, especially in Christian Science, and in this process he will become minutely analytical in his thinking, demanding Truth's password of every thought that seeks lodgment in his consciousness. In his acceptance of Truth, Life, and Love as synonyms for God, he realizes that even to the slightest extent that he accepts reports or testimony of any deviation from Truth, Life, and Love, to that extent does he dishonor God, relatively speaking, for, in the absolute, it is needless to say, God cannot be dishonored, and certainly not by the expression of His being, man.

Man's conscious contact with the one infinite source of all good is the individual dominion that must be expressed, to bear full testimony to his relation with the divine Mind. This testimony cannot be made for him, it cannot find solution in priesthood, in mediators, agencies of any kind; it must become a part of his own individual thinking as surely as the rules that govern numbers must be mastered individually to be of any real benefit to the material problems.

Masses, numbers, quantities of stuff, an abundance of anything material has always had a weighty appeal with human thinking—and why? Simply because things material are all the human, mortal mind can conceive of, and the more

it sees the more it is gratified, but no more does it get reality in quantity than does any error become effective in proportion to the loudness with which it is proclaimed; in fact the more obvious it is, the more easily it is detected as false by the one who is alert to the truth and refuses to be overwhelmed or influenced by the seeming explosiveness or report of the lie. Could it be imagined that Daniel's sense of protection was measured by the number of the lions he confronted; would his courage have been any different were the lions numbered seven or seventy? Could any one think of Jesus as wavering in his feeding of the multitudes to ascertain whether there were five hundred or five thousand to be filled?

Standing alone is the measurement of a man's convictions; not necessarily contrariwise to the views of all others, but certainly for his highest concept of Truth, whether with or against the seeming tide of popular opinion. Standing alone in the true sense is the reality of man's individual position, whether or not he is conscious of it, because his very existence is proof conclusive of his individual expression of Life, of the reality of being, and his oneness with the divine Principle is unaffected by any other individual or expression, -he is single in his manifestation of the at-one-ment with God. When Christian Scientists are called upon to take their stand in the business world, the sick chamber, in politics, or wherever they may be directed, they will persist in the proclamation of Truth without fear of criticism or condemnation, and their task is an easy one when they realize that all men in reality want the truth, whether it is for the time being accepted or rejected: the goal of mankind is a common goal, it is the method of progress that differs.

With the evident necessity for following the command, "Work out your own salvation," it is logical enough to realize the importance of alert thinking in guarding against the mesmeric tendency of material surroundings to have men accept the easiest course, to go with the crowd, to conceal their convictions and avoid shouldering the responsibility of proving their faith by their works. This sense of responsibility fades away and is replaced by real joy when the stand is taken and it is seen that the path has been trod before and the responsibility does not belong to person after all, but to God.

With the clear conviction of the infinity of the only real cause, the truth about the source of all right thinking and acting, can we not now see the significance of the question to Adam after he had allowed himself to be mesmerized by the illusive appeal of the senses, "Who told thee that thou wast naked?" Had Adam analyzed the source of the suggestion in the first place he would have known who the tempter was, and likewise had he known the truth about man he would have known who it was that was tempted,—not the real man. It is getting right back to this point of seeing the tempter and the tempted as one, seeing the absolute nothingness of everything that claims to give reality to aught but Truth, Life, and Love, that is the real basis of demonstrable right thinking and living.

Mrs. Eddy says on page 467 of Science and Health, "Having no other gods, turning to no other but the one perfect Mind to guide him, man is the likeness of God, pure and eternal, having that Mind which was also in Christ."

[From The Guardian-Reprinted in Public Opinion, London, England]

"A day or two ago a friend of mine was present at a meeting of a society in which men of eminence and distinction are wont to discuss the problems of the day," said Rev. H. N. Bate, the Canon Designate of Carlisle Cathedral.

preaching in St. Paul's. "The talk was about the things that every one is talking about—Russia, the Clyde, Ireland, reconstruction, disintegration, the hopes of labor, the fears of society. My friend came away deeply impressed by one thing—not by anything that was said, brilliant as the conversation was, but by something that every one seemed almost deliberately to omit.

"The omission was striking, because the point on which all the dialogue seemed to converge was the one which every speaker left unmade. It was as though they had agreed to say: 'There is one thing wrong with men and men's affairs, and we all know it, but there is something that stops us all from saying what it is; there is a remedy, and we do not differ about it, but for the moment we ring down the curtain upon the tragedy-the rest is silence.' My text breaks the silence and fills up the gap. God is looking down upon the children of men, to see if there are any that will understand and seek after God. That was the implied, the suppressed conclusion of the whole argument. If we could make our way into God's light, we should see light; if we could set Jesus Christ before us, and follow him, we should know what is the next thing to be done. But that understanding is the thing that we lack; that search for God, that desire for Christ's guidance, is the one ambition that we do not choose to have as our ruling passion.

"In the general bewilderment of our times the world is moving far too fast for men who have no clear vision, no steady perception of the things by which men live," continued Canon Bate. "In the church and in civil society alike events hurry on remorselessly; we reap what we are sowing before we have time to think what is to be done with the harvest. Before we realize that we have neglected some part of our task, the bitter consequences of our neglect are upon us. The march of things is merciless. . . .

"Where, we may say, looking at the disorder of the moment, 'where is the place of understanding?' There is no lack among us of ability, shrewdness, adroitness; but there is something missing, the absence of which is making our life in church and state more and more unsatisfying.

"The practice of opportunism is rapidly passing into the adoption of opportunism as a substitute for Principle. Conduct, in great affairs, touching man and God, is something that cannot be improvised; if it is to cohere, there must be that in it which does not change; if it is to be stable, it must have a foundation. On the spur of the moment you can strike a spade into the sand, and make as though you would build; but the kind of work that is bedded upon rock cannot be done on the spur of the moment. Are there any that will understand? Doubtless there are; but in these days our community, which has had to live for years on expedients, is in the grip of expediency, and seems unable to answer plain questions of right and wrong with a resolute Yes or No. We need to learn the first things over again. 'The fear of the Lord, that is wisdom; and to depart from evil is understanding."

["Medical Science" and "Christian Science"—From The Los Angeles (California) Times]

The district attorney of Los Angeles County recently addressed a letter to the president of the Los Angeles County Medical Society, asking cooperation in the prosecution of Christian Scientists who permit patients to die, without calling in a physician. . . .

The influenza epidemic furnished a good example of the result of various treatments. Of those treated by drugless methods—including Christian Science—less than one per

cent died, and better health followed the bodily house cleaning, whereas of those treated by the approved methods of medical science a large proportion died, and hundreds of thousands are still suffering from "after effects," not of the influenza, but of medical maltreatment.

The district attorney, in his letter, notes that several death certificates have been indorsed, as to cause of death, "Christian Science." Doubtless. There is no love lost between physicians of the regular school and Christian Scientists. They take away business from the "regulars." Licensed drugless physicians might often conscientiously indorse on death certificates of patients to whom they have been called too late, "medical science."

Commenting on the district attorney's letter, a representative of Christian Science remarked: "In looking over the death notices published in one of our daily papers, the fact is disclosed that for the week ending May 4, 1920, over one hundred and thirty persons passed away. Doubtless the majority of these died under the care of a regular physician, and passed away in a regular and orthodox manner. Here the question may legitimately be asked: 'Why was a Christian Science practitioner not called?' Judging by record of achievement, and realizing that in many cases Christian Science is employed only as a last resort, and frequently has saved the patient after all material methods have been exhausted, the failure to call in a Christian Science practitioner might well be denominated 'neglect,' and yet there has been no public condemnation or criminal prosecution.

"When the allopathic method of healing has been established as a science, and no deaths occur under its treatment, then may the health authorities make that method of treatment compulsory."

["Something New"-From Our Dumb Animals]

With the Presbyterian church introducing humane education into its work both in this country and in all its foreign mission fields, and with the eighth provincial synod of the Episcopal church requesting the presiding bishop and council to consider "our humane responsibilities and stewardship," there is hope the Christian church everywhere may yet recognize that the great humane movement that has been growing with the centuries is something more than the manifestation of feeble-minded sentimentalists. Thoughtful men are slowly seeing how vitally related to human character is man's attitude toward the creatures below him. We get away from savagery just in proportion as we get away from cruelty. And we have some distance to go yet.

[Excerpts from the Address of Joseph Motta, President of Switzerland, at the Opening Meeting of the League of Nations]

Our object is to make further wars impossible or at least to obstruct their breaking out. This is the main purpose of the League of Nations, and we bow reverently and gratefully to those philanthropists of humanity and to all the philosophers, statesmen, and friends of humanity, and the noble men and women who have fought for the thought of the League of Nations, in the churches, in Parliaments, in peace societies, in international congresses and have striven to take this idea out of the realm of dreams and make it a living reality. The League of Nations must live. It would be difficult for us to think that it could not, or it would be foolish to expect miracles of it. The individual is impatient because he considers his own existence, but the community moves slowly because no limits have been set for its being. The power which it commands may yet for a long time be

of dubious effect, but even to-day the League of Nations is a great moral power in the consciousness of the world. It may not be possible to abolish might, but above all it will seek to rule through Mind. The more the League of Nations becomes universal, the surer is its authority, impartiality, and atonement. The victor can no longer do without the cooperation of the vanquished. This cooperation is a necessary condition for the life of the League of Nations. Hatred is a curse for human society; nations are great only as they are great in forgiveness and repentance. I would not fulfill my duty as speaker for the Swiss thought if I did not have the courage to express this earnestly in this meeting. The moral, economic, and financial solidarity will stand despite all destruction and outlive the anger, however justified that may seem. This first meeting, which already has thought of inviting new states, has the opportunity and task to break the way in which the idea of universality, which is the ideal of the League of Nations, and peace and final atonement can be attained. The League of Nations is not a league of governments, it is, as its name implies, a League of Nations of people. Even a superficial observer may see that the classification of human society has already experienced radical changes. The fraternity of mankind, to which it has been awakened in the trenches, has not only overcome bitter intolerance with which the different thoughts have been opposing each other; it has broken through the wall of petty and cold pride which has separated classes; brotherhood was awakened in the field and will go on living in our daily work. We dare not wish that democracy should stand still and be silent. Its silence would be delusion, its standstill would be stagnation. Democracies are good, then, even when they scoff, for this shows their tendency for progress, and if even to-day they may look upon the new international order with some lack of confidence, it is still the hope of all.

The League of Nations must live because it is destined to be the work of solidarity and love. Before the closing of this meeting of chosen representatives of different cultures, races, and languages, in the presence of many persons who have come from all parts of the world, adherents of many philosophical tendencies, and believers in many religions, I wish to commend this new League of Nations and its protection to Him of whom Dante in one of his beautiful verses, which closes and crowns his work, speaks of as: "L'amor che muove il sole e L'altre stelle!"—The love which leads the sun and all the stars.

[From "Science and Religion," by John Merle Coulter, in The Biblical World]

All we know about inheritance in general has come from experiments with a few plants and animals for a few years; and from this knowledge we *infer* certain things concerning inheritance in man. In the second place, the characters observed were relatively few and very simple. As soon as more numerous and more complex characters came to be included, apparent contradictions of the laws appeared, and it has taken much mental agility to make the new facts seen to come under the laws, and it is obvious that the laws formulated do not apply in all cases. You may be interested in knowing that during the last few years corn is the most studied plant in reference to inheritance. Numerous investigators are working on it, and every investigator adds facts that make explanation more difficult.

You are prepared now for a statement of our knowledge of inheritance in man. From the scientific standpoint the evidence is most uncertain, because man is beyond rigid experimental control. Such evidence as we have, therefore, cannot be tested. . . . To summarize the situation, it may be said that the so-called "facts" of human inheritance are inferences from data of every degree of reliability and unreliability, impossible to be checked by experiment, and interpreted by what is known concerning a few plants and animals. As a result of this uncertainty, the conclusions are not uniform. For example, there are two recognized schools of eugenics, the English and American, and these schools are at variance in many of their conclusions, and especially conclusions which call for practical application. When the experts differ it is evident that we have not attained demonstration.

[From The Pioneer]

A prominent Canadian in an address before the students of a high school said in part: It is a sign of the times when the students of a high school are interested in the writing of essays on the relations of science to temperance. It indicates that the youthful mind of the country is interested in one of the greatest social questions that statesmanship has to deal with.

["The Program of Protestantism"—From Leslie's Weekly, New York City, New York]

The Federal Council of Churches of Christ in America has sent out a message to the churches, embodying the chief conclusions reached in its fourth quadrennial meeting recently held in Boston. This document deals with a variety of questions, including the industrial struggle, immigration naturalization of aliens, the League of Nations, criticism of the Jews, the racial problems, with special consideration of the Negro as a factor in American life, international disarmament, prohibition here and in our dependencies, the resumption of relations with Germany, and improvement of our relations with Mexico. The underlying assumption of this letter to the churches is that all human relationships are in essence spiritual, and unless . . . illumined by knowledge and controlled by good will and a sense of duty, these relationships become hopelessly dislocated.

There are two weaknesses in this survey which perhaps will disappear under the discipline of actual practice. The first is the excess of sweetness and light. Too much sugar just now is not wholesome. The world program of Protestantism would be better for a little more iron. The second weakness or omission is probably the cause of the first. There is not sufficient declaration of [fundamentals] backed by the authority of changeless law, upon which the new program can rest. The church just now is badly in need of ideas. There never has been an extension of the application of religion to life that did not grow out of some great, new idea or truth. It is the truth that sets men free. Some day we shall hope for a restatement of Christian truth in its application. Until this comes there will be a good deal of motion, but little progress.

[Introduction to a Christian Science Lecture in Reno, Nevada]

On page vii of the Preface to the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity." On page 324 of the same book she says: "Gladness to leave the false landmarks and joy to see them disappear,—this disposition helps to precipitate the ultimate harmony."

Christian Science is teaching its adherents how to think; to leave the false for the true; to "try the spirits" and "hold ...

fast that which is good." The world is constantly going here and going there, looking for health and happiness, while the application of the teachings of Christian Science to the daily need brings health, happiness, harmony, as thousands who have honestly applied this truth can testify.

[From The Dynamo, Published in Los Angeles, California]

What has become of the thousands of men who used to squander their time, money, and manhood in the saloons? The sudden growth of the moving picture industry, following prohibition, answers the question. With the saloons closed, those who frequented them nightly were forced to seek other environment, and not having formed the home habit, a majority of them found their way to the "movies." It was not long before they began taking their families with them, and the business of the theaters increased by leaps and bounds, with consequent unheard of profits for all who had to do with the film industry. . . .

More than ten thousand churches and schools are already equipped with picture machines but there is practically no supply of films suitable to use, hence a large proportion of them are lying idle. The ever increasing demand for an entirely different outlook, in the matter of producing films, is about to be consummated by the organization of a Los Angeles concern. . . . Its adopted slogan is "Films With a Mission," and that mission is "the betterment of the race, through the power of the screen."

The men connected with this movement have ideals above the mere matter of profit. Their pictures will contain no vice, crime, sordidness, brutality, sensuality, or sex problem. An absolute ban will be placed on scenes that make religion a farce, marriage a mockery, purity an old-fashioned notion, and decency a dead issue.

It is proposed under their management that no picture will be made or released that does not contain some situation, suggestion, or definite idea of uplift. Stories will be based upon the struggles and accomplishments of our everyday business and social life. The hopes, ambitions, and aspirations of humanity will be dealt with in a manner conducive to moral and spiritual development, without the slightest suspicion of propaganda. This does not indicate the absence of purpose, power, or punch; on the contrary, clean ideals, virility, and definite accomplishment will be dominant in stories where the characters will live.

[From a Graduate's Appreciation of President Burton in The Michigan Alumnus]

No orthodox statement of the Deity quite satisfies me; but I believe that wherever good work is being done there God is present and in process of revealment. The more difficult and original the work, and the more unselfish the spirit of the doer, the more clearly is God revealed to men therein. And those fortunate beings who know through faith that they are working with and for God, draw from a limitless treasury all they need of hope and cheer. They have established in a bank which fails not an account which can never be withdrawn, and the more it is used the greater the credit balance.

[From The Intercollegiate Statesman]

Do we really believe in Christmas, or do we merely celebrate it? The Master came not to be ministered unto, but to minister. Is the extravagant and unnecessary expenditure of money upon ourselves—either directly, or indirectly, according to our Christmas custom—really a fitting commemoration of his birth? . . .

Three years ago, under the stimulation of the world conflict, men and women almost vied with one another in their eagerness to sacrifice for the suffering women and children; while the men in the service were ready to give their lives, if need be, to make the world a better place in which to live. Let us frankly ask ourselves to-day whether this unselfish spirit was merely a transitory and superficial enthusiasm or a deep-seated, vital, and controlling motive in our lives. If the latter, there are still plenty of opportunities to give it expression. Twenty million human beings are at the point of starvation because of the famine in China. One hundred thousand orphans in the land of the Christ child hold out their little hands for bread. Millions of little children suffer in perpetual misery because the liquor traffic still holds a large part of the world in its grip. Is not [this] a good time to ask ourselves how much we really do care, after all?

[Vice-President Elect Calvin Coolidge as Quoted in The (Boston, Massachusetts) Sunday Herald]

We have sought in our economic relations a false independence and a false freedom. Men are not and cannot be in any of the relations of life independent of the moral laws. The only freedom men can ever enjoy is self-direction in doing right. . . .

The great lesson of economic and political experience is that peoples and parties and nations must observe the moral standards. They have been disregarded in business with disaster, in politics with defeat, and by the nations, with resulting war. If there be any advantage to be gained from these experiences it will be by a renewed determination of the people and the government to meet their obligations.

Church Notices

* * *

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

+ + +

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size 8½" x 10¾". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to Intervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Ditte-

more vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

New Morocco Bound Vest Pocket Edition of Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamplets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "'The secret place of the most High,'" "Never too Late for Healing." "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U. S. A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U. S. A.

Articles and Testimonies

4 4 4

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Scatinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Letters of Appreciation

Many letters of appreciation of THE CHRISTIAN SCIENCE MONITOR and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading.

The following is an excerpt from a quarterly report of a literature distribution committee for

the period ending December 31, 1920:

Monitor Route Subscriptions....31

The Cooperative Advertising Committee have shown a lively interest in the work, some reported purchases through both local and national advertisements (calling advertisers' attention to these purchases). Others while traveling had looked up shops and hotels of Monitor advertisers, acquainting the proprietors with the reason for the patronage and always meeting with the most cordial treatment. One advertiser mentioned that when he placed his advertisement he could not see how it could be of any advantage to him from a business standpoint as his was a local business and the Monitor was an international newspaper, but business had come to him from out of town....

Reports were good and the literature is joyfully received and appreciated everywhere. As the result of a free subscription to the Monitor last year, the —— Seminary subscribed for it direct when they made up their list of papers. A professor at University drew the attention of his class to the work of the Monitor. He asked the students to read it and find out how it compared with other papers and especially emphasized its editorials.

Letter received from one of our leading clubs: "The —— Club wishes to thank you most cordially for your generosity in supplying the reading room of this organization with The Christian Science Monitor. It is one of the very best dailies ever published in this country, the members derive much benefit and pleasure from having it among the club periodicals. Thanking you again, I remain."

The literature is especially welcomed at our institutions. The regular distribution was made at the infirmary on Christmas day and as the services are now being held in the chapel only, our faithful workers assisted in helping to the services those who seemed to be disabled; . . . the workers . . . disposing of nearly two hundred pieces of literature, which was asked for in every case, and reached about two-thirds of the people. . . . The spirit of Love which was apparent, reminded one of Mrs. Eddy's words on page 313 of "Miscellaneous Writings": "Pray ye therefore the God of harvest to send forth more laborers of the excellent sort, and garner the supplies for a world."

Respectfully submitted,

WORKS ON CHRISTIAN SCIENCE

Written by MARY BAKER EDDY, Discoverer and Founder

of Christian Science and Author of its Textbook

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only textbook on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each \$3.00; twelve or more, each \$2.75. Ooze leather, vest pocket size, single copy \$3.00; twelve or more, each \$2.75. Morocco, vest pocket size, single copy \$3.50; twelve or more, each \$3.25. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy \$4.00; twelve or more, each \$3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$5.00; twelve or more, each \$4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy \$6.00; twelve or more, each \$5.75. Large Type Edition, designed especially for the use of First Readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 8 by 1034 inches. Single copy 87.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

FRENCH TRANSLATION. Alternate pages of English and French. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

GERMAN TRANSLATION. Alternate pages of English and German Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in The Christian Science Journal from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in The Christian Science Journal and Sentinel, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German.

Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Jnity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges. 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

7 E

WILLIAM W. S. S. W. W.W.

Understanding and Obedience Necessary

THOMAS W. HATTEN

AS students and demonstrators of this great and wonderful practical truth, Christian Science, our real desires, efforts, and purposes are one, and that one is to gain an understanding of the truth that will make us free and enable us to work out our own salvation in the way appointed, and there is no other way. Our revered and beloved Leader, Mary Baker Eddy, God's chosen messenger to this age, has shown us this way, and God through her has made the way plain in "Science and Health with Key to the Scriptures" and her other published works. She has fully explained the Principle and rules, and our part and work is to make this truth practical in our lives, gain more understanding of God, divine Love, and live it in our daily lives.

Christian Science is a living, practical reality, something for us to make use of each day, and we are Christian Scientists only in so far as we do so and are furnishing real, tangible evidence in the spiritualization of our thought. Understanding of and obedience to divine Principle are necessary, and we cannot demonstrate Christian Science through faith and belief alone any more than the student of music or mathematics can. Of what avail would it be to the student of music to say: "Oh yes, I believe in music; I love it, and I have a great deal of faith in it. I think it is beautiful. I have my own ideas and I just love to talk about music," but when called upon to manifest or express it in a practical demonstration he fails in his effort to do so because of his wrong thinking and lack of understanding and obedience. May we not ask ourselves the question, Do we understand the Principle of Christian Science, divine Love, and are we obedient to this Principle? If we are we cannot and will not allow thoughts of strife and contention and division to govern us or to be our mentality. We know that in unity and harmony and brotherly love is our safe abiding place. It is not destructive but constructive thought that is needed to-day. The beautiful sentiment expressed in the words of one of our hymns, sung so many times in our churches throughout the world, should be a fixed fact and a practical reality in our thought and experience:-

> We are not divided, All one body we, One in hope and doctrine. One in charity.

Love is the great motive power. We may well ask ourselves this Scriptural question: "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" With our thought filled with love, hatred and strife can find no abiding place in us. Mrs. Eddy tells us in Science and Health (p. 475): "Man is spiritual and perfect; and because he is spiritual and perfect, he must be so understood in Christian Science. Man is idea, the image, of Love; he is not physique." Hear also her inspired words in "The First Church of Christ, Scientist, and Miscellany," in the article entitled "A Word to the Wise," beginning on page

223: "The hour is imminent. Upon it lie burdens that time will remove. Just now divine Love and wisdom saith, 'Be still, and know that I am God.' Do all Christian Scientists see or understand the importance of that demand at the moment, when human wisdom is inadequate to meet the exigencies of the hour and when they should wait on the logic of events? I respectfully call your attention to this demand, knowing a little, as I ought, the human need, the divine command, the blessing which follows obedience and the bane which follows disobedience."

Although these words of wisdom and love were written by our dear Leader years ago they are just as important and valuable to-day and applicable to present conditions. We cannot lose sight of the fact that Christian Science is a divine revelation of Truth and comes to us through Mary Baker Eddy, God's messenger to this age, and that it was through understanding and obedience to divine Love, the Principle of Christian Science, that she created and established all the institutions and activities of Christian Science on this earth for the good of humanity, and they are all ideas of Mind, indestructible and inseparable, and their establishment the direct results of her loving life work and demonstration; and can we not all see the wisdom and advantage of maintaining and supporting these ideas and thus protect and safeguard our cause? May divine Love open the eyes of all to see and realize what we are doing. Hear the words of our beloved Leader (Miscellaneous Writings, p. 312): "Oh, may the love that is talked, be felt! and so lived, that when weighed in the scale of God we be not found wanting. Love is consistent, uniform, sympathetic, self-sacrificing, unutterably kind; even that which lays all upon the altar, and, speechless and alone, bears all burdens, suffers all inflictions, endures all piercing for the sake of others, and for the kingdom of heaven's sake."

It is the good that we understand and demonstrate, what we put into practice, that is of real importance and value to On page 323 of Science and Health we read, "We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated." Working out our salvation is a divine command and demand. In Science and Health (p. 261) we are also told that "Good demands of man every hour, in which to work out the problem of being." Gaining the consciousness of our true being as the sons and daughters of God requires work, earnest, faithful, individual work, and another cannot do our work for us; we must do it for ourselves. Each step in the line of progress must be taken, but we only take one step at a time, and what a glorious work it is and what a reward! Think of it! The complete freedom from all error, sin, sickness, and death, and the attainment of heaven, harmony, the consciousness of Life and Truth and Love-our real being; and this is true now and always has been, but how much we express and demonstrate of this truth here and now depends upon our faithful work and effort.

In "Miscellaneous Writings" (p. 283) we read, "Each student should, must, work out his own problem of being; conscious, meanwhile, that God worketh with him, and that

he needs no personal aid. It is the genius of Christian Science to demonstrate good, not evil,—harmony, not discord; for Science is the mandate of Truth which destroys all error." We can and will find joy and satisfaction in doing our work in Christian Science. To keep the goal always before us strengthens and encourages us along the way, and our love and gratitude and appreciation of our beloved Leader and Christian Science grow stronger. Although to mortal sense she has physically gone from our sight, the impersonal Savior, the Christ, Truth, expressed and manifested through her written word, will continue to lead and guide all into the understanding of eternal Life.

Underlying Motives

HARRY C. BURBRIDGE

RADUALLY mankind is waking to the realization that it G lives in a world of thought. Perhaps no simpler example of this is found than the obvious fact that actions are first thought before they can be carried out. A large project may be conceived, and every step from the designer's plans to the least movement in effecting them is the result of thought. It follows necessarily, then, that a man's actions are the true indication of his thinking. The world has long seen this and expressed it in the old adage, "Actions speak louder than words," but in its endeavor to determine the motive from which a deed originates, the world has been very far from sounding the depths of the real motives from which human actions spring. It of course takes one step, and sees that if a man acts dishonestly he is obviously thinking dishonestly, no matter how much he may try to hide this with words. The world calls this an example of the adage, condemns the man, wishes he might reform, and there drops the matter. Now to the thinker, dishonest actions express much more than the world sees in them. It is obvious that the individual expects to gain by being dishonest, and this gain is always material things, or can be measured in terms of material things. This is the crux of the whole situation. The world does not see it and certainly the individual does not, but it is nevertheless true. The real meaning of the dishonesty then is this: The individual believes he lives because of matter, lives in matter, and is made happy by matter; hence his effort to accumulate matter by any means.

The world long ago found out from hard experience that in the end a man gained nothing by dishonesty, and so came the saying, "Honesty is the best policy;" but if a man's honesty is no more than policy it has a weak foundation indeed. It is because so much of the world's honesty has just such a foundation that so frequently the individual forgets his better sense and fails in some instance to be honest. But a little real understanding changes all this. When once a man understands the fact that life is spiritual, not material, nothing could induce him to darken his spiritual vision with a dishonest act. The temptation may come with all the usual alluring arguments to make this one exception, for there is so much to be gained. To the materialist whose honesty is based on policy it may seem that as there is always supposed to be an exception to every rule, this is the exception. If he sees no more than the choice between an honest or a dishonest act he is comprehending little what his decision reveals. Had he gained some perception that life is spiritual, he would know that there is no exception to the rule of righteousness and would discern that his choice really expresses his belief regarding that most fundamental question, "Is life spiritual or material?" Then he would see how far-reaching is his choice and he would never hesitate a moment in his decision.

Now this is equally true of all wrong human action, not only of what the world calls wrong, but much of what it sanctions. Not only can all wrong action be traced to wrong thinking, but always the wrong thought and action are based on the belief of life in matter. The motives of human action fill in the whole range from what is termed instinct to the most carefully thought out plans of the educated mind, but the thing which puts them all into one category, that which is human about them all, is the belief of mind in matter; the belief that man lives in and is subject to a material body. This does not mean, of course, that the educated man is no nearer the kingdom of heaven than the savage, for he has outgrown many fears and limitations with which the savage is still struggling; nevertheless the fact remains that what is wrong in the action of either is based on the belief which is common to both, that of life in matter.

The solution of all mankind's problems, of course, is waking to some comprehension that life is spiritual, and Christian Science has come for just this purpose. The writings of Mary Baker Eddy have so exposed the fallacies of dogmatic teachings and the false interpretations of the Bible that the world is beginning to get some perception of that great fundamental fact. Much of the difficulty the individual encounters is due to his false sense of what he calls "self." Whether or not he perceives the fact himself, his actions disclose that he considers this "self" to have been created by matter, to be sustained by matter, and what he fears most, that it will be destroyed by matter. But in Christian Science he finds the true "self," as Mind and not matter. Jesus put this directly when he said, "I and my Father are one." Mrs. Eddy, referring to this statement, on page 361 of "Science and Health with Key to the Scriptures," says, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being." The one, then, who would waken himself to true being most rapidly, is keeping actively in thought this oneness with his Maker. The consciousness of this at-one-ment is expressed constantly as his living and governs it. This ever present consciousness, then, is the true source of government and the one whose actions spring only from this source is expressing the ideal which Mrs. Eddy set forth on page 106 of Science and Health, "Man is properly self-governed only when he is guided rightly and governed by his Maker, divine Truth and Love."

Pentecost

EDITH E. COHEN

I T is very interesting to note how in the Old Testament Pentecost was held in commemoration of the children of Israel being delivered from servitude to the Egyptians and of the freedom they experienced through reaping the fruits of their labors, which culminated in the gift of the law obtained by Moses, who, having seen sufficiently clearly, received the truth and gave to their waking thought the guidance from God. This Pentecostal power was continually being manifested by some great seer, either prophet, king, or judge, who was given the power and ability to lead the children of Israel from their ignorant ways through the understanding of God, but the people often seemed too blinded in materiality to take full advantage of their opportunities. The Old Testament is one long example of such experiences. John the Baptist, the messenger who urged repentance, was still more enlightened, and foretold the coming of Jesus the Christ. In "Science and Health with Key to the Scriptures" Mrs. Eddy makes it very clear that the descent of the Holy Ghost came with the understanding of Jesus' teaching. In the paragraph

mental activity. It always means looking to Principle. Prin-

ciple is perfection. There is no evil in Principle. We can al-

ways be sure when we are looking to Principle because

Principle gives us only one answer either about ourselves or

our fellow men in any situation-perfection. On page 259 of

"Science and Health with Key to the Scriptures" Mrs. Eddy

tells us, "The Christlike understanding of scientific being and

divine healing includes a perfect Principle and idea,-perfect

God and perfect man,-as the basis of thought and demon-

stration." If one is alone, seemingly struggling with a prob-

lem, he can always look to Principle and know that he is get-

ting the absolute truth. If he looks to human personality,

especially if the question be a public one, he is liable to be

drawn into a maze of conflicting human opinions from which

he may find it difficult to extricate himself, and which may

If two thoughts present themselves it is always helpful to

choose the better one-the one nearest Principle. Doing this

we cannot fail to be guided rightly and to bring healing to any

situation. Principle constitutes the Mind that was expressed

in Christ Jesus, the house built on a rock. There can be but

one answer about either God or His idea; therefore Principle

urges, "Look unto me, and be ye saved, all the ends of the

Truth

GEORGE E. DANIEL

is all that there really is. Truth is absolute, infinite,

eternal. There is no halfway point at which one may stop

and loiter between what mortal mind calls truth and error.

A thing is either true or it is not true, it is perfect or it is

not perfect, it is real or it is not real. It is impossible for a

thing to be at the same time true and untrue, real and unreal,

perfect and imperfect. Mrs. Eddy tells us in "The First

Church of Christ, Scientist, and Miscellany" (p. 242):

"Christian Science is absolute; it is neither behind the point

of perfection nor advancing towards it; it is at this point and

must be practised therefrom. Unless you fully perceive that you are the child of God, hence perfect, you have no Prin-

ciple to demonstrate and no rule for its demonstration. By

this I do not mean that mortals are the children of God,-far

from it. In practising Christian Science you must state its

Principle correctly, or you forfeit your ability to demonstrate it." So-called mortal man would make unto himself

many laws and many gods, but Mrs. Eddy knew, and we must

learn, that God created all that is, and His law that governs

the universe and man as created in His image and likeness is

one God and His law that brought them unharmed out of

the fiery furnace. It was the truth that Daniel knew about

this same law that raised him above any fear of the king's

edict and caused him to go as usual to his window looking toward Jerusalem and pray to his God three times a day;

and it was his knowledge of this perfect law of God that

protected him and brought him forth from the lions' den. Daniel well knew that he could not waver for an instant

nor obey one iota of the king's command without breaking God's law, "Thou shalt have no other gods before me."

Jesus said: "Thou shalt love the Lord thy God with all thy

heart, and with all thy soul, and with all thy mind. This

is the first and great commandment. And the second is like

unto it, Thou shalt love thy neighbour as thyself. On these

two commandments hang all the law and the prophets." It was his perfect knowledge of this same truth about God and His law that enabled Jesus to heal the sick, cleanse the lepers, and raise the dead. It was this absolute divine Principle, and Jesus' perfect knowledge of it, that brought him forth from the rock-ribbed tomb. "Love is the liberator," Mrs. Eddy says (Science and Health, p. 225), and the Christian Scientist who is reflecting Love, Truth, and Life most clearly and who is recognizing and demonstrating the true brotherhood of man and doing unto others as he would have them do unto him, is helping most to overcome the mortal sense of or the world's hatred of the truth.

As Love and Truth unfold, hatred, sin, disease, and death disappear, and man's God-given heritage, dominion over all error, is proved. In these times of seeming unrest, discord, and strife, when nations seem to have risen against nations, peoples against peoples, and men against men, the calm, sweet assurance comes that came to the Hebrew children, to Daniel, and to Jesus, that divine Love is ever present and ever active. And as the light shines forth, the darkness vanishes; as the truth is learned, the lie is destroyed. The demonstration of Christian Science reveals the truth about God and man, causes wars to cease, and nations to "beat their swords into plowshares, and their spears into pruninghooks," and brings to mankind the realization of the song of the angels, "On earth peace, good will toward men."

Old Age Overcome

KATHRINE JONES

O those who have settled down with the fatalistic accept-To those who have settled down and learner of old-age beliefs, Christian Science comes with the glad assurance that the stagnation and loss of normal faculties that are considered an accompaniment of advanced years can be overcome here and now. Not God, but simply socalled material law, has pronounced man old, and if God does not decree that man shall age, become inactive, and die, then nothing can. It is as absurd to gauge a man's usefulness by the number of his years as it would be to do so by the number of pounds he weighs. Helpers are needed, and who cares how old his helper is? Would it have made any difference to the man who "fell among thieves" if the good Samaritan had been a hundred years old? So, let all the men and women in the world who feel that they are being shoved by mortal belief into a corner of loneliness and inactivity declare with the understanding of infinite Love that they will no longer be old.

Man's abilities are spiritual, indestructible, and unlimited always, and should be understood as such. The lethargy of mortal mind will struggle against the true idea and try to mesmerize and kill it. The argument, "You can't teach an old dog new tricks," may try to discourage any effort for reformatory thinking, but the influence of this false argument can be overcome by the understanding of the simple proverb, "If at first you don't succeed, try, try again." The mere act of making an effort in a right direction is so life-giving that those who are making an effort might almost be called the living, and those who are not making one the dead. But violent action must not be mistaken for vigorous thinking; no sudden outward act, no animal will power has any part in this new, sweet vision of the spiritual man's infinite possibilities. It is the power of divine Love that animates and frees, and regeneration is the effect of turning to divine Love for life.

To him whose life up to the present may have seemed a sad series of mistakes, who cries, "Oh, if I could only go somewhere where no one knows me and make a new start!"

Christian Science says: "You can always have a fresh start with God. All that God knows about you is beautiful, and God knows all that there is to know." As one gains a little understanding of this infinite, tender Love, and turns with a repentant heart to that divine purity which is God, and begins to reject wrong thoughts as neither his nor his brother's, he will find the true Friend, who loves him, and identifies him with good.

Right thinking is, indeed, so powerful that it not only produces harmony in human experience, but it actually overcomes death. "To be carnally minded is death;" then, to put off the carnal mind, material thinking, and to accept the thoughts of the Christ, Truth, is the right procedure for overcoming the last enemy. Every time we destroy a murderous intention, or an unkind, unloving one, or a belief of pleasure. or pain, or life, or intelligence in matter, and substitute the pure thinking of divine Mind, the truth of loving activity, we are lessening the seeming power of sin and death for all mankind. We can say in our hearts daily, as Mrs. Eddy writes in "Retrospection and Introspection" (p. 22): "It may be that the mortal life-battle still wages, and must continue till its involved errors are vanquished by victory-bringing Science; but this triumph will come! God is over all. He alone is our origin, aim, and being."

All right effort, willingness to learn, and prayer, bring us to the realization that God's creation is already perfect. What is this man made in God's own image? Is he not wholly like Spirit, like Mind, composed of all the qualities that express God? Can we conceive of joy getting old, of peace being worn out, of harmony being tired? Then man, who is made up of these and similar spiritual qualities, cannot be old, nor diseased, nor worn out, and if we gain this conception of man we shall demonstrate in present experience harmony and freshness and vigor.

Walking in the Light

CARRA L. THORESON

In his first epistle, John declares that "God is light," and that "in him is no darkness at all," and adds: "If we say that we have fellowship with him, and walk in darkness, we lie, and do not the truth: but if we walk in the light, as he is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin." Then if we are walking in the light and guidance of divine Mind, we are enjoying fellowship with the Father, and no suggestion of darkness, no lie, or mesmeric attempt to bewilder can divert us from the true path into some jungle of doubt or apathy where we might be led to neglect our duty to Principle.

To have "fellowship one with another" means to associate together with a united interest and with kindly regard, and that is what we must do if we would walk in the light. If one hates his brother, he is stumbling along in darkness; that is, he is thinking darkly, thinking unrighteous thoughts which seemingly blind his eyes to the true light of love and harmony. Thus we need to pray for light, for understanding. Mrs. Eddy writes in "Science and Health with Key to the Scriptures" (p. 10), "Prayer means that we desire to walk and will walk in the light so far as we receive it, even though with bleeding footsteps, and that waiting patiently on the Lord, we will leave our real desires to be rewarded by Him." And again on page 510 she says, "Truth and Love enlighten the understanding, in whose 'light shall we see light;' and this illumination is reflected spiritually by all who walk in the light and turn away from a false material sense." Then it follows that when one seems en-

understanding."

such effulgence.

gulfed in the darkness of a "false material sense" of sick-

ness, discouragement, sorrow, or poverty, one needs to turn

resolutely away from such demoralizing thoughts to the

light of Truth and Love; and as the ever presence of God

is realized, the false beliefs which infest the darkness silently

disappear with the darkness, and the glorious light of Love

imparts to the one turning to it that peace "which passeth all

to revel in darkness, to gloat over its seeming misfortunes,

rehearsing its woes wherever it can find a listener, thus mag-

nifying them and making them seem very real; but just

here, when one is groveling in the very depths of despair, one should pray with the psalmist: "Thou hast delivered

my soul from death: wilt not thou deliver my feet from

falling, that I may walk before God in the light of the living?"

and confidently expect to be delivered if he but realizes that

"God is light, and in him is no darkness at all." The deliver-

ance need not be deferred, for our Leader says (Science and

Health, p. 504), in explanation of the passage of Scripture

that "'one day is with the Lord as a thousand years.' The

rays of infinite Truth, when gathered into the focus of ideas,

bring light instantaneously, whereas a thousand years of hu-

man doctrines, hypotheses, and vague conjectures emit no

A Christian Scientist makes it his daily business to walk

The study of the Lesson-Sermon, which radiates the

in the light. He begins his day by seeking light, understand-

light of Truth to the whole world, he does not consider in a

desultory manner or from a mere sense of duty, but with

earnestness and consecration. From this study he goes forth

instructed in the knowledge of ever present Love, realizing

God's protecting power. No matter what his work seems to

be, he knows that he is about his Father's business as he ex-

presses good in every thought and act, a kindly greeting here,

a pleasant smile there, ready and cheerful obedience in what-

ever is required of him if he is employed, and if an employer,

he is manifesting a kind and generous consideration toward

those in his employ, together with a thoughtful interest in

their welfare. In the divine consciousness of righteous living is the reality of all good. The Revelator speaks of the holy

city which "had no need of the sun, neither of the moon, to

shine in it: for the glory of God did lighten it, and the Lamb is

the light thereof. And the nations of them which are saved

shall walk in the light of it. . . . and the gates of it shall not

be shut at all by day: for there shall be no night there." Truly

tion, or maketh a lie."

agement, fear, sickness, sin, or whatever material beliefs have held them in bondage, for "there shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomina-

all may leave behind them all the darkness of doubt, discour-

The Scriptures declare that "he that saith he is in the light, and hateth his brother, is in darkness even until now. He that

loveth his brother abideth in the light, and there is none occa-

sion of stumbling in him. But he that hateth his brother is in darkness, and walketh in darkness, and knoweth not whither he goeth, because that darkness hath blinded his eyes." All

the concomitants of darkness are as unreal as the darkness, and simply are not; in the universe of Spirit only good exists,

God and His idea, and nothing else is true, no matter how the material senses may contend for recognition. If we are walking in the light of divine guidance, no thought of envy, jeal-

ousy, malice, covetousness, fear, or worldly ambition for place and power will be accepted as real. Upon its appearance, it will be instantly rejected and replaced with that Love

which is God, simply by the knowing of the allness of divine

[467]

Love, which leaves no place for a supposititious opposite. In this manner the gates of our thought should be constantly guarded against the possibility of the entrance of "any thing that defileth."

God, the ever present light, "is no respecter of persons;" even the seeming darkness of a prison cell cannot exclude this spiritual illumination in which all may walk. Speaking of this light which God called day, Mrs. Eddy says (Science and Health, p. 504): "This light is not from the sun nor from volcanic flames, but it is the revelation of Truth and of spiritual ideas. This also shows that there is no place where God's light is not seen, since Truth, Life, and Love fill immensity and are ever-present." If, then, one seems to be walking in the darkness of discouragement or any other unhappy, material belief, one needs only to deny such false belief, and to know and declare that God's image and likeness is never in darkness, but is ever moving in accord with God's will, expressing health, harmony, contentment, and the affluence of good. He is thus expressing the allness or wholeness of Truth, which is the light shining in darkness; and as with the children of Israel, the pillar of cloud that went before his face will stand behind him, and his forward path will be luminous with the love that heals and delivers from all evil, so long as he persistently keeps his feet in the path of light, never turning aside into the alluring byways of worldliness; and one who so walks little realizes how immeasurable is his influence for good upon his associates.

One may say: "Christian Science demands too much. I cannot give up every pleasure for it." Instead of giving up the seeming pleasures which fluctuate and fade away, the student of Christian Science is substituting for them the fadeless and ever harmonious joys of Spirit. A man is never satisfied with human pleasures, so called. After a time they pall upon the senses and there is a reaching out for something better than he has yet experienced. In Christian Science this craving is fully satisfied, for in proportion as one walks in the light of divine Mind, thinking and doing only that which is good and true, in that proportion does he realize unalloyed happiness, health, and peace.

[Written for the Sentinel]

Thy Will Be Done

FRANK L. HALLAM

'HY will be done, we sing and pray In accents loud, on bended knee; But do we mean just what we say? That is: Thy will be done-in me?

We need to learn, Thou God of love, That each of us must do his part; And works, not words, alone can prove The truth in every human heart.

Give us, O Father, grace and power To know Thy will; and this we pray, That in our very darkest hour Thy will, not mine, be done, we say!

To do Thy will we needs must know Thy perfect truth, the Christ revealed; And then, through faith and love we show That every discord may be healed.

And if we strive Thy will to know, And-more than this-Thy truth to live, Rich blessings then will surely flow From Thee who hast all things to give.

Tithes

THE history of the word tithes is not dissimilar to that of many others in the language. It began in some idea of propitiation, it was continued as an act of gratitude, it is finding a purely metaphysical significance. The idea is, of course, much older than the history of Israel, nor was it confined to the Semitic race. It originated in the fear of all primitive peoples for their deities. These gods, whom they endowed with their own worst passions, suitably magnified, were represented, by a cunning priesthood, as demanding a tenth of the fruits of the people's labors. If this were not forthcoming then trouble was to be expected. Failure of the next year's crop, murrain amongst the cattle and the flocks, even plagues amongst owners themselves. As superstition faded, as a truer sense of Principle began to dawn, Olympus and its kindred heavens fell into gradual disrepute. The Israel of Abram, if the term may be permitted, led the way into monotheism, and the theory of the payment of tithes began slowly to be reconstituted on the basis of gratitude for God's mercies. Then came the dawn of Christianity, and the restatement of religious faith on a metaphysical basis. "Think not that I am come to destroy the law, or the prophets," Christ Jesus declared, in the Sermon on the Mount: "I am not come to destroy, but to fulfil."

The second century of the Christian era saw the laughing of the gods out of Rome, mainly owing to the satire of Lucian, the pagan disciple of the philosopher Epictetus. A little later the road was opened to the teaching of Christianity in its pure metaphysical significance. Miserably enough, the destruction of the culture of pagan Rome, unreplaced by this metaphysical teaching, was already beginning to envelop the western world in the ignorance of the dark ages. Slowly and painfully Christianity had to fight its way back to some understanding of its lost metaphysics. The mediæval period saw the struggle to give to the nations the Bible in the vernacular. The renaissance witnessed, in the revival of letters, the restoration of the right to think. The era of modern history dawned with its long and fluctuating battle between education and superstition. And then, at last, in the nineteenth century, came the rediscovery, in the new world, of Christian metaphysics, in what the Discoverer, Mrs. Eddy, named Christian Science. "In the year 1866," she writes, on page 107 of the Christian Science textbook, "Science and Health with Key to the Scriptures," "I discovered the Christ Science or divine laws of Life, Truth, and Love, and named my discovery Christian Science."

The writing of Science and Health required the making of a whole body of fresh definitions, arrived at by a process of devolution, and in the course of these Mrs. Eddy defined tithe, on page 595 of Science and Health, as: "Contribution; tenth part; homage; gratitude. A sacrifice to the gods." Anybody can see from this how exactly the historical meaning of the word has been preserved, and how its full metaphysical significance has been left open to the exploration of the student. To the mere ceremonial keepers of the law, eighteen centuries before Mrs. Eddy wrote, Christ Jesus had

said, "Woe unto you, scribes and Pharisees, hypocrites! for ye pay tithe of mint and anise and cummin, and have omitted the weightier matters of the law, judgment, mercy, and faith: these ought ye to have done, and not to leave the other undone. Ye blind guides, which strain at a gnat, and swallow a camel." What, of course, Christ Jesus was condemning was not the payment of tithes according to the law, but the idea that any such material payment could possibly be substituted for the contribution of love, or the gratitude of spiritual understanding. The whole futility of such an idea was to be exposed one day, in its nonsensical ultimate, when the nonconformist farmer, in England, found himself charged with the payment of tithes to a church from whose doctrines he was a dissenter.

The truth of the matter, of course, is that though a man may charge himself with the material payment of tithes as a token of gratitude, for anybody else to assess his gratitude for him is nothing short of a reductio ad absurdum. Tithes, if they are to be anything but a legal charge, must be the result of spontaneous homage to Principle. The Levitical law took advantage at once of the grim faith and the ignorant superstition of the Israelitish tribesman to endow a primitive establishment of religion. Christ Jesus exposed the hypocrisy of this. But he did not attempt to urge a people, unprepared for the change, to repudiate the law. He contented himself with impressing upon them the necessity of not forgetting the spirit of the law in their obedience to its letter, well aware that an awakening, on their part, to its metaphysical intent would accomplish all that was necessary in the reform of the ceremony. In other words, his complete grasp of Principle had endowed him with that trust in patience which James accepted with such conviction as to be able to write, "Let patience have her perfect work, that ye may be perfect and entire, wanting nothing."

What, of course, all this means is that it is only possible for a man to pay tithes out of his understanding of Principle. He may begin in a simple belief in their efficacy, he may continue in a faith in their desirability. But only when his faith has ripened into understanding can he pay his tithes out of understanding. Then they will not be of anise or of cummin, but of metaphysical knowledge, expressed in the destruction of sin, disease, and death, through the demonstration of Life, Truth, and Love. In that day a man learns that he has nothing of his own to give, since there is none good but God, and that this God, Principle, has already given not a tenth of goodness, but all goodness to His image and likeness, man.

In that wonderful letter "To the National Christian Scientist Association," printed on pages 137-139 of "Miscellaneous Writings," Mrs. Eddy has indicated something of what tithes, spiritually, and so actually, are. She has shown, in one wonderful paragraph, the necessity for that personal self-examination and self-control which can alone shake off the lusts of the flesh. When this has been faithfully done, the ability to preach the gospel and heal the sick will have been demonstrated; and it will be possible, as she says, on page 139, to "then bring your tithes into the storehouse, and God will pour you out a blessing such as you even yet have not received."

FREDERICK DIXON.

The Reassurance of Divine Love

In trusting Principle, as revealed through Christian Science, for help and healing, a man's encouragement lies in the immanence of good. There is neither reason nor room for discouragement when one knows that the divine Mind is the source of all courage, is actually present, and is, in fact,

know where man's confidence is.

the consciousness in which the real man always lives. Infi-

nite Mind is not something to be gained by the only man

whom God knows. The image and likeness of God already

manifests this true Mind. Illusory mortality, moreover, can

gain good only by vanishing in the presence of it. Such a

statement is a paradox, a contradiction of terms. Every

sense of limitation that gives way to the illimitable is the

subsiding of just so much mortality in the demonstration of

man's immortality. It is, thus, continuously encouraging to

dence in God. To be sure that immortal Life, or the causa-

tive Principle of being, is indestructible now is to have God's

eternal guarantee of living. This assurance does not come

about through any inductive examination of material phe-

nomena, nor through mere human intuition as explained by

psychology. The basic fact of consciousness, irrespective of

material sense testimony, is the adequate reason for immor-

tality. Because consciousness really exists now, it always

has existed and always must exist; for if it included any

element of destruction, it would not have complete existence

even now. The more one considers this truth, the more is

the fact of consciousness in one way or another. By this

term, however, most such systems have meant the utterly

hypothetical mortal mind, with its beliefs, and not the true.

divine Mind and its idea. As Mrs. Eddy says, moreover,

on page 116 of Science and Health, "They never crown the

power of Mind as the Messiah, nor do they carry the day

against physical enemies,—even to the extinction of all belief

in matter, evil, disease, and death,-nor insist upon the fact

that God is all, therefore that matter is nothing beyond an

image in mortal mind." It is the understanding of the in-

destructibility of the divine consciousness and its manifes-

tation that rejects the suggestions of disease and discord and

reduces them to the nothingness which they really always

sense testimony, one might well agree with the dismal mus-

ings of Ecclesiastes, "Seeing there be many things that in-

crease vanity, what is man the better?" In these days of

gross materialism of earthly living and sordid realism in

fiction, one might be inclined to accept the similarly dismal

To-morrow, and to-morrow, and to-morrow.

comment of Macbeth:-

25 :22 3 2.1

It is only when one turns completely away from the belief in merely mortal past and mortal future to the sureness of the spiritual now as eternal that one feels the true buoyancy

that is healing because it is infinitely more than human emotionalism.

Christian Science, then, enables one to face with serenity the suppositions of the most pessimistic human philosophies and to replace all these with the joy of demonstrated Prin-

ciple. As Mrs. Eddy reassures us on page 14 of Science and Health: "Entirely separate from the belief and dream of material living, is the Life divine, revealing spiritual understanding and the consciousness of man's dominion over the

whole earth. This understanding casts out error and heals the sick, and with it you can speak 'as one having authority.'"

What could be more truly encouraging than this? Knowing

that man lives and acts in the divine Mind, not in matter,

[469]

now and always, one is protected from the most insidious arguments of discouragement. Only the belief in matter is vanity and passes, like the illusion that it is, from to-morrow through yesterday to nothingness. While all this suppositional sense of things subsides, the true Life goes on now, actual, tangible, free, and quite apart from the false dream.

Under the marginal heading "Positive reassurance" Mrs. Eddy says on page 420 of Science and Health, "Instruct the sick that they are not helpless victims, for if they will only accept Truth, they can resist disease and ward it off, as positively as they can the temptation to sin. This fact of Christian Science should be explained to invalids when they are in a fit mood to receive it,-when they will not array themselves against it, but are ready to become receptive to the new idea. The fact that Truth overcomes both disease and sin reassures depressed hope. It imparts a healthy stimulus to the body, and regulates the system. It increases or diminishes the action, as the case may require, better than any drug, alterative, or tonic." The true consciousness is the consciousness of perfect assurance and reassurance, of orderly and indestructible action, of health, joy, and holiness. This spiritual consciousness is the only consciousness there really is to be accepted, and yet it is what no merely human philosophy has ever cognized in the least.

The reassurance which Christian Science gives to all who turn to it is, therefore, genuinely sympathetic, in that it shows the way of overcoming. The practice of Principle is neither cold nor sentimental, for it is the manifestation of divine Love, entirely different from mortal vagaries. Being uninterrupted, the activity of the infinitely loving divine Mind reassures and heals, even while supposititious mortal mind claims to deny its effectiveness. Day by day, then, the student who knows that divine Love is Principle replacing every suggestion of trouble with spiritual harmony is rightly encouraged. It is not a vain hope that is thus aroused, but positive presence of Mind that is demonstrated. Though this presence may be stated and explained in all sorts of different terms because of its infinity, it continues forever the same, as the consciousness of good.

GUSTAVUS S. PAINE.

[Written for the Sentinel]

Peace

ANITA GRAY LITTLE

WHY need one struggle in the dark? Truth's way is plain to see, Wisdom's light is infinite And righteousness is free!

Yet mortals blindly fight along Earth's dream-bound paths of sense, Unmindful of true brotherhood And Love's great recompense.

Ere long 'tis suffering halts their pace; They pause to grumble, "Why? And through the darkness of the night Is heard the Christ's reply:

Peace, peace, be still, and lo, The truth shall make thee free To serve no other gods but God; And Love thy law shall be.

One need not struggle in the dark; Truth's way is paved with light. One cannot fail to win true peace When he but serves the right.

Testimonies of Healing

With a grateful heart I give my testimony, hoping that it may be helpful to others. During the middle of November, 1918, I became ill with the grip, a severe nervous trouble, and articular rheumatism. For ten weeks I was in a wretched condition and during the first three weeks was unable to sleep day or night, owing to the pain. This was followed by other troubles of a seemingly serious nature, among which were the loss of the power of speech, and coma of three weeks' duration.

In this great distress my relatives heard of Christian Science. They requested the help of a practitioner and read Der Herold faithfully. Eight days later I was healed. I was able to dress myself, the power of speech returned, and I was able to go out of doors. I owe my health and this new and correct understanding of life to Christian Science, but the greatest blessing of all is the knowledge of the great, allembracing love of our Father, God, who constantly cares for and blesses His children. I sincerely hope that all may be led to the knowledge of God and man as taught by Christian Science. I am grateful to Mrs. Eddy and so thankful that one was found through whom the redemptive truth of Jesus' teachings could again be revealed to the world. I am grateful to the faithful practitioner, and especially thankful for a right understanding of God, and that I have learned the correct way in which to pray.—(Miss) LINA MÜLLER, Neuburg-Wülflingen, Switzerland.

I think there is no one who has more cause for gratitude for Christian Science than I. Just about three and a half years ago it healed me of a mental upheaval, a case of nervous prostration of such severity that it threatened to rob me of my reason. Our finances seemed in an utterly hopeless condition and everything was as black as night. This condition continued for five months, during which period I had Christian Science treatment. The last week the light broke forth; first the financial problem was solved, then the other healing followed. The months following this healing, which were in the springtime, were the loveliest I have ever spent. God's power and His love for His children had been so clearly proved to me, and I felt so close to Him and so sure of His care; I can never describe the buoyancy and gladness I felt.

"I will never leave thee, nor forsake thee," is the promise of our God. I was also helped by the following passage from "Miscellaneous Writings" by Mrs. Eddy (p. 19), "He who has named the name of Christ, who has virtually accepted the divine claims of Truth and Love in divine Science, is daily departing from evil; and all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine source." Why should we fear? I hope this testimony may encourage some other earnest heart struggling through the gloom.

(Miss) Luciana G. Phillips, Berkeley, California.

To-day when reading the testimonies in the Sentinel, I felt it time for me to express my gratitude for Christian Science,—for what it has done and is doing for me. I did not at first want Christian Science for fear of displeasing God, for I thought it was anti-Christ, until a friend, knowing my need of the truth, said, "You have studied and know your Bible; will you look into Science and Health if I bring it to you?" I consented, and as I turned away from the

telephone I realized that the Scripture says, "Prove all things; hold fast that which is good." As I read the chapters on "Prayer" and "Atonement and Eucharist" I said, This is what I have always believed, only I could not prove it, and here is a teaching that shows how to prove God's promises by doing the works that Christ Jesus did.

I was very busily employed during the week, and on Sunday I went to a denominational Sunday school and then to church. In the afternoon I wanted to relax and rest, but could not on account of the pain in my head. I also suffered from biliousness, and had taken so much medicine that I was at a loss to know what to do next. When, through Christian Science, I perceived that God made man in His image and after His likeness and gave man dominion, and that "God saw every thing that he had made, and, behold, it was very good." I saw that nothing had power to make me sick, and as this truth was revealed to me I was instantaneously healed. Distressed stomach and aching head had vanished. I had no more use for medicine, so I gathered it all together and disposed of it, without reservation, and for over seven years I have resorted to divine Love alone for my healing.

On page 226 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes, "I saw before me the sick, wearing out years of servitude to an unreal master in the belief that the body governed them, rather than Mind." I had started on my journey from Egypt to the promised land, from matter to Spirit, and I have had many healings on the way, among which were the overcoming of bowel trouble, frostbite, and fear. Resentment is dissolving in the light of Truth. Christ Jesus is the Way-shower, and Mrs. Eddy walked in the way-he pointed out, and has proved to the world that it is the only way to harmony. I am so grateful for this truth that lights my path, and grateful that Christian Science has been revealed in our day and in a language we can understand. My desire is that I may express more and more of God as Love.

(Mrs.) Anna Phillips Jones, Lakewood, Ohio.

Gratitude prompts me to tell others some of my experiences along the way which leads from the belief in matter to the realization of Spirit. When first coming to Christian Science in 1914, I was not suffering from any so-called physical disease, for the suffering was entirely mental, accompanied by a nervous breakdown, which had for the previous five years grown steadily worse, so that I feared my reason would give way under the strain.

For nearly two years I was a patient of a well-known nerve specialist. I shall always feel grateful to this physician as he was thoroughly honest with me, and endeavored to direct my thought toward spiritual realities, which at the time I thought unusual in the practice of medicine. Several times he told me that in my case medicine was of no use. and that he could not help me, unless I could help myself, also that I must always be hopeful. I told him that I would be glad to help myself, but I could not as my will power had gone, and I had nothing left to hope for; I wished only to be saved from myself, and from final collapse. On another occasion he asked if I ever considered the fact that I had a spiritual self, as well as a physical body. I did not see any meaning in his question, unless it was to prepare me for final disaster, but now I see that he was trying to save me from despair by spiritual means quite outside the limits of his orthodox profession of medicine. I told him that I often went to church but rarely sat through the whole service, as church seemed only to add to my depression. He insisted

that going to church was not what he meant. At this point in our conversation I seemed to remember hearing something about a religion which healed, and I asked him if he knew anything about Christian Science. He said he knew there was such a religion, and that it had done some good work for people with diseased nerves.

I mention these conversations in the specialist's consulting room only to show how one of the prominent doctors of the day, when faced with disease which he knew would not yield to medicine, turned deliberately to Spirit for his natient's aid. I remembered his statement concerning Christian Science, and when, some months later, I seemed absolutely engulfed in mental depression and my physical strength was giving way so that I felt I had at last come to the end of human endurance, this remark of his forced me into action. I felt too desperate and ill to consult him again, believing myself to be past human aid, but I knew that I must have some relief immediately. In great mental anguish I telephoned to a Christian Science practitioner whose name I had heard mentioned in connection with Christian Science, and fearfully made an appointment for the same day. Accompanied by my mother-I was too ill to go alone-I visited his office. I hardly know what happened that first visit; I was past knowing or caring about anything, but I came away with a peace of mind I had never known before, and a strong determination to fight this mental trouble, with all its bitterness, loneliness, disappointment, and depression, and to overcome it. It was a revelation to find that I did not have to use will power at all, but that human will had to surrender to the divine Mind.

This new hope came to me in 1914, and since then, with the patient, loving help of the practitioner to whom I went in my greatest distress, I have risen right out of the darkness of the slough of despond and am renewed mentally and spiritually. The circumstances which resulted in my breakdown have not changed, but I am changed, because I realize that "in him we live, and move, and have our being." I can now look upon this same error and know that its seeming reality is false, and that it is already stamped with its own seal of doom to annihilation.

I would like to mention one thing by which my progress in Science seemed at one time retarded, because it may also be a stumblingblock to others. Some years ago I was a keen student of mental science, mental suggestion, and the like. After I had gained my first peace of mind in Christian Science, I began to associate the help I was receiving with my knowledge of the influence of mental suggestion, consequently the divine light which had at first illumined my thought began to grow dim. This at the time was a serious trouble to me, as I knew I was allowing a human so-called power to usurp the place of divine power in my thought. For a time this seemed to retard my progress, and my newly found peace and joy seemed to be at stake. I was losing sight of spiritual substance in chasing a shadow. This experience, however, demanded of me very hard work for a time, and great patience and clear reasoning on the part of the practitioner, who again helped me to overcome this stumblingblock, with the result that now mental science, will power, and kindred human beliefs, no matter how intellectually they may be cloaked, are seen to be as erroneous and unreal as the more common and ignorant forms of error.

To-day I am filled with joy, for whereas I once believed that I could never be happy again, even if I continued to live, I now know that there is but one Life, and that perfect and eternal. I am grateful for the great healing and saving work of our revered Leader, Mrs. Eddy, for the many churches, Sunday schools, and reading rooms, and for all the Christian Science literature. My gratitude also goes out to the earnest practitioners and workers who are united in the saving and healing work of finally demonstrating the allness of God, good, to all the nations of the world.

(Mrs.) Rose Morris, London, England.

٠

I desire to express my gratitude for Christian Science. For years I had been troubled with a bowel disorder and had taken a great deal of medicine with only temporary relief. Christian Science has healed me of this difficulty, also of neuritis, lumbago, and a rupture. These diseases were overcome through reading the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am also very grateful for the spiritual awakening and for the help that Christian Science is to me in my daily work. I am indeed thankful to God, the giver of all good, and to Christ Jesus the Way-shower. I am also very grateful to Mrs. Eddy, who revealed the truth to this age, and for the lectures, the Christian Science literature, and to the kind friends and practitioners who have helped me.

ROBERT W. SMITH, Detroit, Michigan.

4

I should like to add my testimony to the many I have read. I was healed of rheumatism of long standing through reading the Christian Science Sentinel, which was sent to me by a young friend who had just entered upon the study of Christian Science. It was through reading the testimonies and studying the articles contained therein that the truth was revealed to me, and I learned that my heavenly Father is ever present with me. Just after I became a student of Christian Science I suffered from a nerve disease of the feet and limbs, of which I was healed in ten days after asking for help. My daughter was also healed of partial paralysis.

I cannot express in words my love and gratitude to God and to our dear Leader, Mrs. Eddy, for all the blessings that have come to me through the study of the textbook "Science and Health with Key to the Scriptures" and the Bible.—(Mrs.) A. C. McNeil, Bangor, Maine.

More than twenty years ago I turned to Christian Science for help because I knew not what else to do. Vacillating between conflicting opinions of prominent physicians, it was in sheer helplessness that I took our baby to a Christian Science practitioner, knowing at least that Christian Science could not hurt her. Moreover, a friend whom I had known for several years had become an earnest student of Christian Science, claiming to have found her healing through its teachings, and had also become a practitioner. I knew that this friend was honest in her opinion of Christian Science, however different it might be from my own, and so it was with mingled feelings of doubt and fear that I took our baby to her.

After her first treatment baby had a good night's rest. For twenty months we had struggled under materia medica to find much needed help, until things had gone from bad to worse, and now under Christian Science a marked improvement was the immediate result, and in a few weeks the child was completely healed. Surely I had found man's extremity to be God's opportunity. The textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was soon purchased and earnest study was commenced.

For many years I had suffered with chronic headaches,

WALLE STELLE WELL

but while studying Science and Health I found that my headaches had entirely disappeared, and it is now twenty-three years that I have enjoyed immunity from that suffering. Before becoming interested in Christian Science I had been receiving treatments for a very troublesome condition, from one of our most skilled and conscientious physicians, who finally said that an operation would be the only way out of my difficulties. Discouraged and frightened, I just drifted along for a few months, making the best of things, until Christian Science came into my experience and I was completely healed of this trouble while reading Science and Health.

In our immediate household we have witnessed, among other things, the healing of measles, whooping cough, colds, rheumatism, pneumonia, ptomaine poisoning, neuritis, and nervous breakdown. For all these blessings I am truly thankful, and especially I am grateful to our Leader, Mrs. Eddy. I also wish to express appreciation for the periodicals so wisely established by our Leader. On page 3 of Science and Health we are told that "gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech." It is therefore possible for us to test our gratitude, and words are vain and useless unless we are bringing into our daily experience the fruits of the Spirit as outlined by Paul in Galatians 5:22-23, and unless we are obeying the commandments of Jesus to "love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind" and "thy neighbour as thyself."

(Mrs.) RUBY M. FISHER, San Jose, California.

٠

The efficacy of Christian Science treatment has been proved to me many times. Two cases of healing stand out in my thought, one of which was of erysipelas. I was awakened in the night with a large swelling on my lower lip which was greatly irritated. In a short time the swelling and irritation had spread to my face and head, and finally to my arms and hands. As fear seemed to be governing, I thought it wise to ask for help. The help, so lovingly given, reached me quickly, and it was but a few days before my skin was as clear as an infant's.

Another healing was of appendicitis. Again help was asked for, and it was most beautiful to see the disease vanish into its native nothingness. During both of these experiences I was enabled to attend to my work each day as a teacher of music. My gratitude for our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is unbounded, and my desire is to prove to others, through a consecrated life, what Christian Science can do.—(Miss) LILLIAN MAY HUNTER, Malden, Massachusetts.

4

About four years ago an incident occurred which I accepted as an illustration of the powerlessness of error when one's thought is fortified with the truth. With friends I had attended a Wednesday evening service and was on my way home, having assured them that I did not hesitate to walk alone the blocks between their home and mine. But I must have disregarded Mrs. Eddy's injunction, found on page 210 of "The First Church of Christ, Scientist, and Miscellany," wherein she writes: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them," and must have permitted my thought to become dormant to a sense of God's presence, for I was awakened to my surroundings when a rather large dog suddenly thrust his nose at me from behind; in fact, he half jumped at me. I was somewhat startled and

fearful, but I was quickly strengthened with the thought that God's ideas are in their right place and I had nothing to fear. The dog came at me again, but this time I was able to see that he was muzzled. Then the episode became illuminating as an illustration of the fact that error is always muzzled and powerless when one is fortified with an understanding of divine Truth, Life, and Love.

Through Science I have been constantly benefited during the past eleven years. I'was healed of a broken wrist bone within four days, being able on the fourth day to dress myself and manipulate a typewriter. Christian Science has taught me the source of my supply, and every real need has been met through this understanding. I have found, too, that in so far as I have been willing to relinquish preconceived ideas as to the outcome of seemingly discordant conditions, and have been willing to accept divine direction, harmony has always resulted, in oftentimes unexpected ways. So much that is good and beautiful in life has come to me through my endeavor to be a Christian Scientist that, as so many others have said, I am not able to express my gratitude in words.

(Mrs.) VERA H. SMITH, Cranford, New Jersey.

4

Since my girlhood I have loved and studied the Bible, and as far as I understood the teachings of Jesus have endeavored to put them into practice, even to leaving dear ones and going to a foreign country to tell the good news to those who had never heard of God as Love. There was a great deal in the Bible I could not understand, but I left these subjects alone, supposing they would be made clear to me after I had passed through the change called death. After leaving China and while leading a very different kind of life, my love for the Bible grew less, and prayer was nearly given up, but although surrounded even in my own home by those who denied the existence of God, and hearing members of my family argue that the materialistic theory was the only right one, I still clung to the teaching of my early days.

While living in this environment I was taken ill. I lost my voice for weeks, and then another trouble manifested itself. "In my distress I cried unto the Lord, and he heard me." A friend sent me a Christian Science Journal, which I read and reread, until I was no longer nervous and fearful, and I knew that I was healed. I saw that the teachings of Christian Science are based on the Bible, and that I had found the truth which makes free. I borrowed "Science and Health with Key to the Scriptures" by Mrs. Eddy, read it and, like many others, laid it aside only to take it up again. I said Christian Science must be all to me, and I have used no material remedies since that time. I laid aside my glasses a few weeks later. A practitioner lovingly helped me, and since then, in spite of many seeming difficulties, the way has grown brighter each day. Divine Love has met my every need. I have had several healings. I am grateful for membership in The Mother Church and for class instruction. Truly God is good, and my desire is to show my gratitude by my life, by knowing, and helping others to know, the whole truth and to understand God as divine Principle, Love.

(Mrs.) FANNY JOHNSON, Raymond, Washington.

4

Christian Science was brought to my attention about five years ago. For the reader to fully appreciate my condition at that time, it will be necessary for me to relate a few incidents in my life, as my condition was the result of a combination of circumstances. When I was but five years of age

all these healings.

my mother passed on and our home was broken up. Most of my life, therefore, has been in the environment of boarding schools and boarding houses. In my early teens I acquired the habit of drinking in order to be sociable. Cigarette smoking and other deplorable habits soon followed, which caused me great physical suffering in later years. While a law student at a southern university, a domestic difficulty arose which resulted in my being separated from my only sister, who was a few years my junior. A few days prior to my graduation from the university I was forced to give up the idea of law and seek more immediately remunerative employment. I finally got a position that barely paid a living wage. I was getting in debt every day and saw no hope of a change of position. I became very depressed and cynical from discouragement and sought relief in drinking. I was arrested one night in an unconscious condition from drink, and found that my overcoat and some personal effects, highly valued by me as keepsakes, had been stolen from me.

Shortly after this, Christian Science was brought to my attention. After a few weeks' study of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I was able to do without glasses worn for eight years for astigmatism. I have been healed of a number of physical difficulties, one of which was a severely sprained ankle, which was completely healed in one treatment. I am free from the habits of drinking and cigarette smoking, and later secured a good position in the legal department of a large corporation.

I am particularly grateful for the spiritual awakening and for "the peace of God, which passeth all understanding," that I am now privileged to enjoy, and also for my love for the Bible, which before was a closed book. All I am and all I have, I owe to Christian Science. My only ambition to-day is to grow in grace, to live a life of purity and unselfed love, and to help my fellow man on his journey from matter to Spirit. May my sincerity and gratitude for this wonderful truth be proved by the standard set by Jesus, "Ye shall know them by their fruits."-GEORGE BAGBY CAMPBELL, Washington, District of Columbia.

I first heard of Christian Science about twelve years ago through the healing of a dear friend. At first I scoffed at it, but having this truth more fully explained, became interested. I was then placed in a neighborhood where there were several Christian Scientists who always expressed great happiness. This especially appealed to me, because I had been ill for years, and could see little in life to make me happy.

At this time, a member of my family became infected with poison oak, and decided to test the efficacy of Christian Science by applying to a practitioner for treatment. The result was a healing in two days, instead of two weeks of great discomfort, as formerly. There was our proof of the truth of Christian Science, and I can say it has been our mainstay ever since. Members of the family have been healed of tonsillitis, influenza, abscess on lungs, measles, smoking habit, chronic internal displacement, biliousness, intestinal inflammation, and innumerable other troubles.

My little son was very quickly healed of measles through the help of a Christian Science practitioner. On the fourth day the child was out in the yard, free from even a mark of discoloration, to the surprise of the health officer who had seen him two days previously. At this time many of the children of the school were confined to their homes for ten days or more with the same trouble. I am indeed grateful for

This testimony would be incomplete without an expres-

sion of gratitude to our Leader, Mary Baker Eddy, for her work for mankind, especially in establishing our periodicals, The Christian Science Journal, Sentinel, Monitor, and the Herald .- (Mrs.) ALICE L. BROWN, Watsonville, California.

Christian Science found me while I was reading many things of a religious nature with the idea of making a right choice for church membership. When I read the chapter on "Prayer" in Science and Health it seemed that my need in that direction had been met. I had found the truth, and I shall never forget the quiet sense of satisfaction and gratitude that entered my thought with the first reading of that divinely inspired book. This quiet sense did not, however, remain with me continuously, for there have been many instances of fear and disturbance since, but each overcoming has meant a step nearer the truth.

Gradually chronic sick headaches and colds have been healed, and a sprained ankle was healed in a little more than twenty-four hours. When I was forced to remain flat on my back for three weeks on account of a broken leg, Christian Science treatment kept me as comfortable as one would be any night when normally at rest. I am now most grateful, however, for the healing, even though it was slow, and for that "gentle presence, peace and joy and power," which was the real healing, and of which Mrs. Eddy speaks in her wellknown poem, "Mother's Evening Prayer" (Poems, p. 4):-

> O gentle presence, peace and joy and power; O Life divine, that owns each waiting hour, Thou Love that guards the nestling's faltering flight! Keep Thou my child on upward wing tonight.

> > (Miss) Velma Schmidt, Davenport, Iowa.

It has been almost four years since I commenced to study Christian Science. My entire outlook on life has been changed. My first healing was experienced at the time of the birth of my little son, when no severe pain was experienced. The healing was a revelation to me. From that time on my great desire has been to gain an understanding of this truth that frees from sickness as well as sin.

My little daughter was healed just recently of a number of warts. One day while looking at her hand, which was almost covered with them, the thought came to me, "Now is the time to prove your understanding of Christian Science." I at once read the Lesson-Sermon from the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures," by Mary Baker Eddy, and the truth came to me so clearly that God's child is perfect now, and it is impossible to add anything to God's perfect creation. In the first chapter of Genesis we read: "And God saw every thing that he had made, and, behold, it was very good." The healing followed.

Both the children and myself were healed of an annoying skin disease. This was a very slow healing, but in the meantime a great deal of error was uncovered and destroyed. Words cannot express my gratitude for the understanding that has come to me in the last few months. We have been living in a place where there are no Scientists, consequently I have been compelled to study the more earnestly and to apply all the understanding I have. The beliefs of separation, discouragement, and discontent have been almost entirely overcome by knowing that God, good, is present everywhere and that He is no respecter of places. It has been proved to me very clearly that, in the words of one of our hymns (No. 241), "earth has no sorrow but Love can remove."—(Mrs.) Blanche Lowe, Mabel, Oregon.

Signs of the Times

["The Law of Opposites"-The Christian Science Monitor, Boston, U.S.A., Dec. 9, 1920]

When Mrs. Eddy wrote in "Unity of Good" (p. 48): "He [God] sustains my individuality. Nay, more—He is my individuality and my Life," she was giving the result of years of earnest study and consecration to the task of working out the Science of being. Any student who will make a study of the textbook of Christian Science, "Science and Health with Key to the Scriptures," will discover how metaphysical is Mrs. Eddy's use of words. Through this study he will begin to comprehend the teachings of this Science and eventually to demonstrate what he has learned of immovable facts which have staggered the wise men throughout the ages.

Take, for instance, the word individual, which appears time after time throughout Mrs. Eddy's writings. The first definition of man, as given in most dictionaries, is "an individual," and individual is defined thus: "Latin, individuus; not divisible; of one essence or nature; indivisible." Drawing one's conclusions, then, even from mortal mind's own learned definitions, man is indivisible. This, however, refers only to mortal man, while Mrs. Eddy's definition refers to man himself, who is the expression of Life, Truth, and Love. Since these are synonymous terms, all there is to man is Life. Therefore, man cannot be separated from Life, or God, the only cause. There is just one thing which makes cause to be cause, and that one thing is effect. The necessity of indivisibility here becomes apparent, since cause cannot be cause without effect, and vice versa.

Mrs. Eddy insists upon individuality, upon oneness, unity, indivisibility. Mortal mind, however, in its perversity, contradicts its own wisdom and insists, not upon unity, but division and separation, supporting its arguments with the so-called law of opposites. But there can be no opposite in infinitude, since All can have no counterpart. The sum total of the allegory in the second chapter of Genesis is a dream of the suppositional opposite of God, of good, of harmony, of Life and activity. As every one knows, a dream is the product of sleep, inactivity, unconsciousness. Even mortal mind concedes that a dream is unreal. Mortality, then, which insists upon conformity to the law of opposites,-that is, the law of human birth and death with all its ramifications,-is nothing more nor less than the phantoms which people the dream of the sleeper. But a mortal is not man, he is but a counterfeit of man. A perusal of Science and Health will bring to light the truth about man as created in the image and likeness of God, and about this mortal, miscalled man. The belief of life in matter is the opposite of the fact that Life is God, hence it is the repudiation of the creator of the only life. Mortal mind, in an attempt to be consistent, revels in inconsistencies. For instance, mortals admit that man is the expression of consciousness, but they nevertheless maintain that in order to sustain and retain a state of clear consciousness, unconsciousness must be resorted to for refreshment and resuscitation.

Another of this so-called mind's assertions is that man must have material food in order that life shall be sustained. In other words, Life, which is spiritual, must depend upon its opposite, matter. And so this so-called law of opposites goes on in its descending scale, always excluding Spirit from the equation and leaving it unexplained. But the sweet assurance is given that all shall know about Spirit after death. What is it that demands tribute from all to this barbarous code known as the law of opposites? It is the senses, not

God. Man does not preserve his health and prolong his days by lounging beneath "the tree of the knowledge of good and evil" while acquainting himself with supposed laws of hygiene. "Acquaint now thyself with him, and be at peace." Consciousness is not sustained through recourse to unconsciousness. Life eternal is not the reward of submission to "the last enemy," but is gained by overcoming death. Thus the law of opposites is proved by Christian Science to be no law at all, but a tyrannical usurper.

Since God is the Life and individuality of man, and since God is self-sustained, why resort to matter? Again, since man's individuality is a manifestation of unity, need he suffer separation in order to gain a higher sense of unity with his creator? Universal harmony can never be obtained by probing the depths of mortal belief, nor by adherence to laws physical. "Life," Mrs. Eddy says, "is the origin and ultimate of man, never attainable through death, but gained by walking in the pathway of Truth both before and after that which is called death" (Science and Health, p. 487). Spiritual law sustains perpetual harmony through activity, not inaction. God is the Principle of this law and He knows no opposite. They who refuse to accept the true standard virtually have none, since the so-called law of opposites is a conglomeration of contradictions, having no foundation and no proof of its reality.

Christian Science, as discovered and taught by Mary Baker Eddy, gives valid proof of being the law of God, and it demonstrates the divine Principle of all law to man in order that man may know the rule of life and keep His commandments. Keeping His commandments is man's immunity from the so-called law of sin, sickness, and death, and the First Commandment bids man come out from the material world and have no beliefs material, but to cleave to that which is spiritual.

In "No and Yes" (p. 10), Mrs. Eddy gave the world a wonderful insight into the heritage of man when she wrote: "Eternal harmony, perpetuity, and perfection, constitute the phenomena of being, governed by the immutable and eternal laws of God; whereas matter and human will, intellect, desire, and fear, are not the creators, controllers, nor destroyers of life or its harmonies. Man has an immortal Soul, a divine Principle, and an eternal being. Man has perpetual individuality; and God's laws, and their intelligent and harmonious action, constitute his individuality in the Science of Soul."

[From "A Religion for the New Day," by Charles F. Dole]

Our prescription, or law, for making a man is simple enough for a child. It has only three points—first, to do justice; secondly, to love mercy; thirdly, to walk humbly with thy God. . . . The word is to do justice; this plain emphasis is commonly overlooked. It is the same idea that you find in the beatitude: "Blessed [that is, happy] are they which do hunger and thirst after righteousness." No one pretends that the people who hunger and thirst to get righteousness out of other men are happy; they are anxious, nervous, fearful, lest they fail to get justice. But Jesus and others had observed that those who give their attention to do justice are happy. It is not said that they will be happy in some other life, or "in heaven." They carry heaven in their hearts now. Let any man set his mind to do justice, and he never lies awake nights because others fail to do justice to him. . . .

There is no particle of proof that evil is a person or a unity. There can be no self-existence in a negation. . . . Is any mighty nation your enemy? No! Your own fear, your suspicion, your enmity, is the enemy. . . . Every fresh revival

powers of officials of a school district to equip or employ at

the expense of the district, physicians, dentists, or nurses for treating pupils. The action was brought last year by a tax-

payer of school district No. 1, who sought an injunction

to restrain the officials of the district from expending funds

for this purpose. Judge Hall, in denying the application,

held that the good accomplished by the medical department

was so great in comparison with the inconsequential expense

of maintaining it that the expenditure was justifiable. Ac-

cording to a dispatch from Olympia, however, the supreme

of the court reads: "The judgment of the trial court is

reversed and the case remanded to that court with directions

to render a judgment enjoining the school district and its

officers from furnishing or equipping on the school premises

or elsewhere appliances for the medical, surgical, or dental

treatment of the physical ailments of the pupils of the schools

at the expense of the district, and from employing dentists

and nurses for the rendering of such medical, surgical, or

dental treatment, provided," says The Times, "that the

injunction shall not apply to the clinics at the parental

should it not be strong? . . .

of religious life has brought with it stories of marvelous cure.

In our own time we have seen Christian Science arise as a

new health cult no less than a form of religion. Do not sup-

pose that there is nothing whatever but delusion behind this

fascinating side of religion. Let us use our intelligence not

only to reject the irrational, but also to welcome whatever is

hopefully true. . . . We need now to clear from our minds a

whole cluster of heathen falsehoods as, for example, that

goodness is feeble and evil is strong; that ideals are dreams,

and gold, corn, and barrels of flour are realities. . . . Is good-

ness feeble? It is the toughest substance in the universe,

guaranteed by the Almighty. Men have thought they were

trampling upon it, breaking down its will, torturing, and crucifying it. But they never could kill it; if they seemed to

defeat it in one place, presently it shone out somewhere else.

Goodness is integrity, it is order, wholeness, health. Why

ginning with the old-fashioned assumption of God, I have

found it necessary to begin at the other end and to find what

the near and verifiable facts are which lie back of the as-

sumption. This is the method of all good science; it is the

method of the lovers of truth. Moreover, it is good for our

modesty now and then, in thinking upon the most tremen-

dous questions that man asks, to drop every easy assumption

and to insist that we think out what our words mean. We

have all heard the name of God spoken in an inert, wholly

empty and conventional manner. No wonder if many honest

minds are shy of it. I have found it almost impossible, how-

ever, not to use the word God. Words at best are only con-

venient as tools or symbols to express ideas. No word can

be big or exact enough to satisfy us. The word electricity is

a good illustration of this. It stands for a marvelous invis-

ible reality of power, but the bare word does not in the least

tell any one what this power is. So with the word God. We

must have some symbol to stand for the Power, or Life, or

whatever unknown mystery it is, which is behind all things.

We cannot always be saying the Unknowable or Nature.

Any and every word is only provisional and conceals the be-

ginning of an assumption. Is not the assumption of the idea

great words and ideas are alive in us and in the literature of

the world. Power, Will, Beauty, Mind, Purpose, Integrity,

Goodness, the Universe, Life-each and all of them are

assumptions of knowable reality; they spring out of a

world of experience in which we all have shared. Every one

of them flames up into view from its invisible source to

heights of infinity. Try to keep them inside bounds and

limits, if you want to see why we have to add the word infinite to them. . . . The great question is not whether reality,

or God, exists, but rather, what kind of reality, or God, is it?

Is it-or He-good? Does it make any difference to us

whether "He" exists or not? . . . It is likely that much of

The fact is that we know more than we think. Certain

of God a sort of necessity of thought?

theft. Men will not trade where they cannot trust. Elaborate safeguards in the exchange of goods hamper trade, decrease production, limit intercourse, and otherwise handicap commercial operations. There must be confidence—trust—before there is freedom of action, and that is what is being destroyed by the cancellation of contracts as a result of the collapse of prices. That the cancellations are in the nature of reprisals is no excuse. The only reprisal that should be visited upon violators of contracts is the reprisal of commercial ostracism. The attitude which justifies cancellations grows out of the 'within the law' code which harks back to the days of the wolf pack in industry. What we need is a thorough awakening on the part of both men and women to a realization of the fact that God Almighty has put us in a world filled with opportunities—in a land where the raw material and the milk and honey of our environment of unspeakable excellence is ours for the taking if we will only do the thing that He has commanded us to do, namely, work. What we need is to dethrone the image of Idleness and in its stead to place upon our national pedestal that of Work. . . . We need to get back to the practice of the simple faith that we find in the religious expressions of those who bore the brunt of our early development. Above all and beyond all we need to get back to constant, honest, and unremitting work, than which there is no greater privilege or more glorious blessing."

We do not always agree with some of the financial advice issued by bankers, but the statements bearing on the fulfillment of contracts and those in the same circular emphasizing that this country must get back to the simple faith and religious life of those who bore the brunt of our earlier development we unhesitatingly indorse. . . . Men who love honor and truth must unite to put down the evil practices which have grown up since the war and once more rebuild the national reputation for commercial honor.

[Margaret Porch Hamilton in The Woman Citizen]

Our Woman's Forum in Leonia, New Jersey, now affiliated with the National League of Women Voters, was founded November 18, 1919. On the first page of our secretary's book are pasted two clippings from current dailies, that seemed to have been written specially for us, so fully and clearly do they express our idea of the aim and purpose of our organization. They are these: I. "The United States was founded by people who were thoroughly convinced of the absolute importance of an educated citizenship as a basis for a permanent democracy. If you are going to have a government by the people and for the people as well as of the people, you must take measures to develop a kind of people who are capable of government. If the people of America are to take over the business of the king into their own hands, they must be kings. They must not only know how to govern themselves, but they must learn the technique of government and also acquire the taste for government. Along with citizenship and culture must go the will to politics, the willingness to assume the responsibilities of politics and the training necessary thereto. After the hundred and fifty years of struggle against inertia, we are recognizing the citizenship of women and it is of vital importance that the educated women shall be prepared to assume that citizenship" (Dr. Frank Crane).

II. "We are coming to understand that we have got to give ourselves to democracy if democracy is to succeed. In the measure that we do that, we are making the world safe for democracy. In the measure that we refrain, we are making it dangerous for democracy" (Frank A. Vanderlip at the

ceremony of the laying of the corner stone of the Town Hall in New York city).

Although nearly a year was to elapse before the Anthony amendment was completely ratified, and we had never heard of "citizenship schools," we believed in 1919 that woman's emancipation was near, and we were converts to preparedness. Moreover, and what is more to the point. some of our leaders were believers in the old, effective method of "learning to do by doing." One of our women expressed the feeling of most of us: "I am tired of having things poured into me as if I were a funnel." So we decided to steer clear of lectures and entertainments and to undertake the study and demonstration of governmental machinery; the study and discussion of issues. . . . From the beginning we have consistently aimed at one hundred per cent participation, and we have relied chiefly upon our own resources so that the beginning of our second year finds us with both courage and strength to meet the challenge of our newer and higher ideals.

[Arnold Reymond, in La Semaine Littéraire, Geneva, Switzerland]

Protestantism is having a growing sense of that spiritual liberty to which it owes its origin. While appreciating the different ecclesiastical organizations which characterize it, it is determined no longer to remain the slave of their struggles, for these organizations, which were born out of fixed historical circumstances, are perhaps called to disappear. In any case, they must be modified considerably so as to give place to a singularly broadened Protestant church.

Protestantism tends at the present moment, however. toward ecclesiastical federalism. But true to the rule of freedom of conscience which is its reason for existence. it is inclined to look at doctrinal differences as a matter of secondary importance. It places its ideal in a fellowship which is founded upon charity and mutual respect, and it seeks to realize the unity of spiritual living beyond dogmatic formulas. This is a sublime attempt, which seems if not impossible, at least difficult: "The spirit indeed is willing, but the flesh is weak." Can an organization be founded and exist in durable form merely by the sheet tensity of spiritual force?

Protestantism takes the attitude that religious tradition. however deep its expression may be, is ever mixed with human elements, and for this reason it holds the rights of individual conscience sacred. But the common effort, while respecting these rights, tends more and more to bring in evidence out of the religious history of mankind and especially out of the history of Christianity, the eternal, living element, which through its very life gives a persuading authority. So will the fellowship of true believers be realized not only in outward manner but in a profound way within.

[Medical Freedom Law Is Upheld by California Court-From The Christian Science Monitor]

Medical freedom has been upheld in California in the decision handed down by the District Court of Appeals reversing the judgment of the Justice Court and the Superior Court in the case of Mrs. Laura Culver, of Berkeley, California, who was convicted in the lower court of violation of the state quarantine law in taking down a diphtheria quarantine sign and who was fined fifty dollars or five days in jail. The opinion of Judge William H. Langdon, concurred in by Judges John C. Norris and Frank S. Brittan, associates of the District Court of Appeals, pronounced Mrs. Culver guilty of no crime, declaring there was no state law

and no rule of the board of health under which the premises of Mrs. Culver could have been quarantined for diphtheria carriers or contact with diphtheria carriers. There was no case of diphtheria and no diphtheria suspect at the premises of Mrs. Culver; therefore she broke no law in removing the placard.

The court ruled that a citizen was not committing a crime if he violated an edict of an executive branch of a government when that branch was not acting within the law, and it was necessary for the state board of health to make its rules in conformity with the law. "The board of health is vested with very broad powers, and the public health and safety demand that its powers be liberally construed," said the court. "Because so great a power has been vested in the board of health, it must be exercised within the law. If this power to make rules be granted, before any citizen may be punished as a criminal it must be shown at least that a rule had been made by the board of health prior to the act sought to be punished as criminal, and such a rule must have been either so published as to give it the effect of a general rule of law, or knowledge of it must have been brought home to the person charged with its violation."

The quarantine was ordered by the board of health of Berkeley upon receipt of the following telegram from the secretary of the state board of health: "Quarantine following contacts with cases and carriers of diphtheria until they are determined not to be carriers of the infection." Then followed the names of seven pupils of the Berkeley High School, all healthy, who acting under the state law claimed exemption from the rule that they must submit to examination to determine if they were diphtheria carriers, or remain away from school. The parents of the pupils would not submit to the rule and the quarantine of the premises of the students followed.

The attempt of the medical authorities to nullify the proviso put in the law by the last legislature, exempting school children from any physical examination in the case of objections by parents or guardians, has been thwarted by this decision, which clearly establishes the proposition that a quarantine order cannot be used to coerce children or parents into submitting to a physical examination. The deputy district attorney of Berkeley states that the case will be carried to the State Supreme Court.

4

[From "Why I Believe in the Bible," by J. M. Powis Smith, of the University of Chicago, in *The Biblical World*]

It is a significant fact that the nations of to-day who set the pace in this modern world and are responsible for whatever of light and progress has been incorporated into modern civilization are nations that have worked out their own civilization under the guidance and inspiration of the Biblical message. The Bible of to-day is a striking illustration of "the survival of the fittest." It has been brought into contrast and competition with the other great religious literatures of the world on their own soil and it has had nothing to fear from the contact. It has commended itself to peoples of the most divergent characters and has always had a great contribution to make to their betterment both socially and spiritually. Wherever it has found lodgment it has taken root in the life of the people and has produced essentially the same fruits. It has put a new spirit into backward civilizations and brought them into line with worldprogress. . . .

My final reason for having confidence in the Bible lies

in the fact that I find in the teachings of the Scriptures inspiration and instruction for my own personal, daily life. The visions of the prophets and the longings of the psalmists kindle me to quicker life; and the wonderful story of Jesus gives me a clearer understanding of God and a new revelation of the possibilities of man. I look upon the Bible as a ringing challenge to creative living. I am spurred by its stories of noble, sacrificing service to a realization that I should serve my own day and generation with the same whole-souled devotion and the same forward-facing faith.

[From "Professional Schools of Liberal Education," by Archibald Mac Leish in *The Yale Review*]

There can be no educational postulates so long as there are no generally accepted postulates of life itself. And there has been no real agreement as to the purposes and values of life since the world gave over heaven a hundred years ago. Our colonial history offers a picture of a different kind. In Puritan New England there was agreement on at least one subject, if there was no unanimity on any other point. Heaven was "our great interest and business," and "happiness in the other world" the goal to strive for here. In such a world educational engineering should have been easy; and it was. The "laws" of Dunster, the first president of Harvard College, laid down with no uncertainty the qualification for the degree of Bachelor of Arts. . . . They [the universities] must postulate the regeneracy of the race, the hope of the race, God in us. Just as Dunster's laws were wittingly planned to prepare young men for a life beyond death, so these new laws must be wittingly planned to prepare young men for a life in which death has no part.

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m:

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size 8½" x 10¾". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to Intervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Ditte-

more vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

New Morocco Bound Vest Pocket Edition of Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamplets in German

There is now on sale a new German pamphlet entitled "Ein stilles, sanftes Sausen" ("A still small voice") containing the following articles reprinted from the Christian Science periodicals with alternate pages in English: "The secret place of the most High," "Never too Late for Healing." "Treatment," "Cause and Effect."

There is also on sale a new German pamphlet entitled Läuterung (Purification) containing the following reprinted from *The Christian Science Monitor* with alternate pages in English: "Lusting Against Lust," "The Lust of Money," "The Lust of Power," "Looking Ahead," "Sincerity."

Price of each of the above pamphlets 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S. A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Appreciation and Comment

"WHAT PAPERS HAVE BEST EDITORIAL PAGES?"

Under this title, the Editor & Publisher (New York), in its issue of January 8, 1921, contains an article by Greenville Talbott of the editorial staff of the Augusta (Georgia) Chronicle in which he tells of the interesting question he put to chief editorial writers on dailies in every part of the country. We quote Mr. Talbott in part:

they say that the "best dozen dailies," alphabetically arranged, are the following: Baltimore Sun.

Boston Transcript, Chicago Tribune, [The]
Christian Science Monitor, Indianapolis News,
Kansas City Star, New York Post, New York
Times, New York World, Philadelphia Ledger,
Portland Oregonian, Springfield Republican.

(:-

That is to say, those papers are "the best" from an editorial point of view. In other words, they are the papers that maintain the best editorial pages.

The papers that gave me full and frank replies, ... whose combined judgment rendered the conclusive opinion were . . .

... Representative geographically, politically, editorially, and in every other respect. Surely a trial by such a jury of twelve would render a just verdict, . . .

... these gentlemen are "men who know"—
men who can speak "as those having authority,"
... who combined in reaching the conclusion
that of all the daily newspapers in the United
States those consistently publishing the best
editorials are the ones . . . already mentioned.

The Boston Evening Transcript of January 22, 1921, comments on Mr. Talbott's article with "Some Modest Observations of a Veteran on the Elements of Pre-eminence" by Joseph Edgar Chamberlin, excerpts from which follow:

tion... as to the best paper editorially.... He sent around his questionnaire, and it said: "I want to know which newspapers are your favorites from a purely editorial point of view; not which papers are the biggest or carry the most advertising, or publish the finest features, but which have the best editorials." He obtained answers . . . from all over the United States. The answers, to be sure, were in proper order and in full and frank statement from only twelve papers, but these were all representative and high-class papers, extending from one ocean to the other. In so far as the answers differ, they are of little but indi-

vidual consequence, but when nine of the twelve, as widely separated in distance as New York and Los Angeles and Atlanta and San Antonio and Seattle, . . . agree in naming three certain papers among the best, and the names of certain papers practically run through the approved whole list, the fact seems to be clearly enough indicated that these certain papers are the best, according to expert judgment.

proponents for each paper, three papers of this list are tied for the first place—that is to say, ninc of the twelve judges all voted for these three; and these three are the Boston Transcript, the Chicago Tribune and the New York Times. Then come as tied with the concurrence of seven papers in their favor, these three: [The] Christian Science Monitor, Philadelphia Ledger and Springfield Republican. . . .

These papers, then, are the Twelve Apostles of American journalism. It is probable that if twelve hundred editors, of as many different papers, had been polled on the same question the general result would have been about the same.

... What made these questioned editors select these twelve papers? ... The verdict is unbiassed. Every single judge was personally unknown to the judged. It must be something besides individual caprice; so many widely separated people do not have the same caprice. . . .

. . . THE CHRISTIAN SCIENCE MONITOR, it is now apparent, has got into this list; and the reason is no doubt the universality of its subjects, the thoroughness of its study of them, and the sort of abidingness and sincerity of the quality of its comment, which takes them out of the usual touch-and-go style of editorial comment.

Sincerity, after all, is the touchstone of merit in editorial writing. Ability, force, knowledge of facts, logic, "punch" there should also be; but without sincerity all these are as sounding brass, and a tinkling cymbal.

An interesting circumstance in connection with these twelve favorite papers is that they are all old papers, with the exception of The Christian Science Monitor, . . . the Monitor dates only from 1908. . . .

Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, cach, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellancous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 306 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing. The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco. limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message of sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

1

Rudimental Divine Science and No and Yes. In one volume. French translation, with alternate pages of English vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902.

Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

FEBRUARY 19, 1921

NUMBER 25

Outlining

NINA C. FRANKLIN

IN the thirty-seventh psalm we read: "Trust in the Lord, and do good; so shalt thou dwell in the land, and verily thou shalt be fed. Delight thyself also in the Lord; and he shall give thee the desires of thine heart. Commit thy way unto the Lord; trust also in him; and he shall bring it to pass." One of the most subtle errors which seems to present itself to those who are striving to demonstrate the truth, in connection with every problem from the standpoint of Christian Science, is that of outlining. On page 1 of our textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "Desire is prayer; and no loss can occur from trusting God with our desires, that they may be moulded and exalted before they take form in words and in deeds." On page 591 of the same book, under the definition of Mind, we find: "MIND. The only I, or Us; the only Spirit, Soul, divine Principle, substance, Life, Truth, Love; the one God; not that which is in man, but the divine Principle, or God, of whom man is the full and perfect expression; Deity, which outlines but is not outlined."

When one is asked to treat a condition of disease, the practitioner may inadvertently form a mental picture of the seeming condition, and then outline the manner in which the condition will be overcome, as to whether it will disappear at once, or be gradually eliminated or dissolved. Having admitted the reality of the condition, and outlined how it is to be overcome, we expect divine Mind to heal the disease, as if infinite Mind would work merely according to our finite plans. On page 395 of Science and Health we find this: "It is mental quackery to make disease a reality—to hold it as something seen and felt-and then to attempt its cure through Mind. It is no less erroneous to believe in the real existence of a tumor, a cancer, or decayed lungs, while you argue against their reality, than it is for your patient to feel these ills in physical belief. Mental practice, which holds disease as a reality, fastens disease on the patient, and it may appear in a more alarming form."

If one desires to make a demonstration as to place, one cannot outline where he would like to be or thinks he should be and then expect divine Mind to put him in that place. Rather should we lift our thought in loving gratitude to God that man already has "every good gift and every perfect gift," because God's work is done, and it is perfect. Divine Love is not holding away from us something of good that we wish, tempting us with it, as one might hold a plaything before a child until he reached for it, and then snatch it away from him. It is the lust of mortal mind which tempts us. "God cannot be tempted with evil, neither tempteth he any man," says the apostle James.

Sometimes students of Christian Science are heard to say: "I have demonstrated a position, a home, or an automobile." Spirit does not demonstrate matter. All that one can demonstrate is spiritual consciousness. We can demonstrate only that which is real and true, or that which is a scientific

fact. As in mathematics we cannot prove that two times two equals five, because it does not, so in Christian Science we can prove only that which is true, which always has been true and always will be true. We can realize that man, as God's spiritual idea, is in his right place, because his place is in Mind, that he has always existed and always will exist in Mind, and therefore his every need is already supplied by his loving Father-Mother God. This realization will bring into human experience that which we seem to need, whether it be a position, a home, or the means to go about our Father's business. We have great cause for gratitude in the fact that all our needs are met by divine Principle. We cannot set our heart upon some material thing or condition, and then mesmerize ourselves into believing that we must have it simply because we wish it, and expect divine Mind to work it out for us. Through spiritualization of thought, our desires are "moulded and exalted," and we can safely leave them with Him who doeth all things well.

An experience of a number of years ago illustrates this point. In our home was a young lady who seemed unable to sleep. She would retire between ten and twelve o'clock at night and remain awake until five or six in the morning, when she slept for two or three hours. She asked for help in Christian Science. The demonstration was outlined by thinking she must be helped to sleep, and the work was done to that end, but there was no result. Conditions remained the same. Realizing that something was wrong in the way the work was being done, and recognizing the error, the way of working was reversed, thereby casting "the net on the right side of the ship." A very clear realization of a part of the 121st psalm came: "He that keepeth thee will not slumber. Behold, he that keepeth Israel shall neither slumber nor sleep." The realization came that, since God did not sleep, God's image and likeness did not sleep, did not need to sleep, and was not dependent for harmony upon sleep, because the divine Mind gives man all true rest. The condition was immediately overcome, not by admitting the evidence of material sense, but by reversing it.

Not only would error seem to suggest outlining, but it would seem to have us put everything off into some future time, as that some other time, to-morrow, next month, or next year, we shall have more, know more, or be better, while the fact is that now is the only time there is. The past does not belong to us, it is gone. The future belongs to God, and He is taking care of it. Our work is to know this, and leave it to Him with no anxious thought, and by so doing, bring harmony into our future as well as our present experience. If we allow error to make us keep putting off until some future time the good we would experience to-day, that is all error would seem to wish to do, and we are allowing error to handle us. Outlining is one of the bad habits we seem to have been forming throughout our mortal lives, and we should be most grateful that we are being educated through Christian Science out of this bad habit, into the good habit of committing our way unto the Lord, and trusting also in Him, that He may "bring it to pass."

Leadership

JOHN M. DEAN

WHEN Mrs. Eddy wrote in her Message to The Mother Church for 1901 (p. 34), "Finally, brethren, wait patiently on God; return blessing for cursing; be not overcome of evil, but overcome evil with good; be steadfast, abide and abound in faith, understanding, and good works; study the Bible and the textbook of our denomination; obey strictly the laws that be, and follow your Leader only so far as she follows Christ," she laid down an injunction which lesser apostles of Truth may study with decided profit to themselves and to the cause of Christian Science. Mrs. Eddy was, by the very nature of her position as the Discoverer of Christian Science and Founder of the movement which promotes its teachings, the acknowledged Leader of that movement. She recognized the fact, however, that the beacon light of Christianity is Christ, and that her students could adhere to her revelation of the Christ, Truth, only by following her in the degree that she herself lived and taught consistently therewith. Thus she showed us that personality is never a leader in the way of Truth, and that her right to leadership could find expression only through those spiritual qualities which led her to discover Christian Science, to write her textbook, "Science and Health with Key to the Scriptures," and her other books, to found The Mother Church, to establish the Christian Science periodicals, and to guide the movement into proper channels.

As has been shown, Mrs. Eddy's leadership was founded on a right which was peculiarly hers and was unavoidable as well. Her mantle has fallen on no one. What remains to guide the movement is to be found in her works, and that is sufficient. The "Rule for Motives and Acts" (Manual, Art. VIII, Sec. 1), may be said to be the heart of our church bylaws, for to the Christian Scientist it is surely evident that there can be no true and proper obedience to a single by-law in this book when divorced from that all-inclusive yet simple code of spiritual ethics. The seamless robe of righteousness is not divisible, nor can it be won by the mere casting of lots. Obedience to the letter without regard to the spirit is empty and meaningless loyalty, for "the letter killeth, but the spirit giveth life." Obedience inspired by fear of punishment or expectation of reward is a base counterfeit. Love is the underlying motive for all true obedience. It is the keystone of the arch upon which the utility of every other stone depends.

Priestcraft and the dominating encroachments of ecclesiasticism would rob the individual of his right to think. Christian Science asserts and establishes this right. Take away this fundamental privilege and you have nullified an essential part of Mrs. Eddy's teachings, for salvation comes to each one in the degree of his receptivity and never by wholesale. Those who stand with Principle must of necessity stand together. To stand conscientiously with one who is standing with Principle is not to follow personality; but to stand for either right or wrong merely to be in line with some person is an idolatrous error. It is equally wrong to refuse to take a given side solely because it is espoused by some individual who has incurred one's displeasure. Common agreement with the multiplication table is no indication of personal influence, nor is it an indorsement of the erroneous views which those who accept it may hold in other directions. It is simply mutual consent to a fact which is the property alike of all, as is the air or the sunshine. So it is with Christian Science, in which there is no monopoly of facts. Each one should, however, prayerfully analyze his motives in any given case, and unless he can certainly reach individual convictions through his own processes of reasoning, he may safely conclude that he is following some personality.

In her article on "Personal Contagion" (Miscellany, 117) Mrs. Eddy says: "There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality." At another time, in answering the request of a clergyman that he be granted an interview with her, she wrote (Miscellany, p. 120), "Those who look for me in person, or elsewhere than in my writings, lose me instead of find me." Nothing now leads the Christian Science movement but the truths contained in these inspired writings, which are the culmination of many years of Bible study, and these truths will eternally speak for themselves. They cannot be successfully twisted and distorted into a meaning which their author never intended. Teachers, writers, and practitioners may legitimately elucidate the truth, and church officials should maintain it, but care is needed to see that personal opinions are not substituted for truth.

While it is true that the discovery of a hitherto unrecognized truth is always first accepted by a small minority, it is equally true that neither minorities nor majorities are always right. To espouse a minority side on the assumption that minorities are never wrong is certainly as undesirable as it would be to train with a majority merely because of its popularity. We should stand with right for right's own sake, giving no heed to its worldly reputation. Right must inevitably triumph, and who can doubt this or wish for any other conclusion, even though it brings shipwreck to cherished opinions? To side with God is to side with all that counts, whether one stands thus with a multitude or by himself. In the words of a well loved hymn (Christian Science Hymna, No. 143):—

They are slaves, who dare not be In the right with two or three.

Suffrage

FOLLETTE BROTHERTON

CHRISTIAN SCIENCE in its infinite variety is declared and manifested in any and all forms of activity. The leaven of Truth, taught by Christian Science, is in operation to-day, just as it was centuries ago, when Jesus gave to the disciples the parable in which he likened the kingdom of heaven "unto leaven, which a woman took, and hid in three measures of meal, till the whole was leavened." It is interesting to observe that, in this parable, a woman contributed to the leavening of the whole; and it is a woman, Mary Baker Eddy, the Discoverer of Christian Science, and the Founder of the Christian Science organization, who has given to this age the leaven with which to leaven the whole; and this leaven is manifestly in operation to-day.

The absolute truth, as taught by Christian Science, frees mankind from sin, sickness, and death. Death, a belief of inactivity, is destroyed by Truth, which teaches and proves that in the real universe there exists only spiritual activity; therefore inactivity, the antipode of activity, cannot exist. Christian Science has unfolded the fact that man is made in the image and likeness of God, that God made all that was made, and that He endowed and blessed man with unbounded rights, privileges, and opportunities. Since God has endowed man without limit, it naturally follows that man and woman have equal rights.

Man is not a lawmaker, but the reflection of the one law-making by God. A man, then, cannot make laws that limit and bind; he cannot create laws which hold him, as well as woman, in bondage. Ignorance of right and of God's law has seemed to hold both men and women in bondage for

has been sought and won.

reality threaten to take away once again the freedom that

ent in Mind; and it is omniactive, and just as operative the

day before and the day after the day called election day as

it is on the day specifically so called. Woman's suffrage has

given woman the right to vote, and Christian Science has given to her the knowledge to protect her vote; and this

right and knowledge must be used every day, that it may

be kept bright and shining. It is necessary for a woman who

wishes to understand suffrage in its infinity to register a

vote for Truth every day, and to devote herself absolutely

to the service of true suffrage; then she will realize "Woman's Rights" as Mary Baker Eddy has so beautifully

revealed them in her poem of that title (Poems, p. 21):-

She won from vice, by virtue's smile,

Affection's wreath, a happy home;

The right to worship deep and pure,

To bless the orphan, feed the poor;

Last at the cross to mourn her Lord. First at the tomb to hear his word:

To fold an angel's wings below;

The right to sit at Jesus' feet

ing presence of Christ, Truth, which healed the sick."

which our Leader speaks about.

And hover o'er the couch of woe:

To nurse the Bethlehem babe so sweet,

To form the bud for bursting bloom,

The hoary head with joy to crown;

In short, the right to work and pray, "To point to heaven and lead the way."

Healing

THOMAS ALLEN

same to-day as it was in the time of Jesus and the prophets

before him. The manifestation of this healing is not con-

fined to bodily ailments through the destruction of false

beliefs; its ramifications are much broader. Wherever there

is a false concept manifested, Truth is there to heal; for

Truth is the only reality, and it is when we recognize the

spiritual fact instead of the material counterfeit that we

participate in the healing brought about by Christ, Truth,

is, needs no healing; it is the false concept of man that

must disappear before we can realize in its fullness the true

identity and individuality of man as the reflection of Prin-

ciple, God. It was left for Mrs. Eddy, through her revela-

tion of Truth, to show to the world the infinite way of healing.

Knowing the allness of Mind and humanity's need of salva-

tion, she gave forth the fact that it was the living Christ, in-

stead of the physical Jesus, that healed the sick and raised the

dead. The presence of this living Christ as rediscovered by

the Founder of Christian Science is made manifest in her

works, which contain the treatment necessary to heal any

false belief. They are much more than philosophical treatises;

they are facts demonstrated. Take our daily newspaper, The

Christian Science Monitor. It is leavening the whole newspa-

per world for Truth by cutting out the sordid and giving to all mankind a better understanding of what a daily paper ought

to be. It is part of the undivided garment of Truth-one of

the leaves of the tree which is healing individuals and society,

ridding the world of a material view of life and replacing it

Man, the image and likeness of God, the only man there

N page 351 of "Science and Health with Key to the

Scriptures" Mrs. Eddy says, "It was the living, palpitat-

Her dazzling crown, her sceptered throne,

tablished fact, and it is of interest to consider the influence

that Christian Science has over this activity; for Christian

Science educates and uplifts, because of its perfect divine

Principle; it teaches the need of doing all there is to do in

the way of Principle. Students of this divine Science are

awake to the requirements of the world and are thoroughly

informed on all subjects; for they have learned to abandon

(Science and Health, p. 269): "The categories of meta-

physics rest on one basis, the divine Mind. Metaphysics

resolves things into thoughts, and exchanges the objects of

sense for the ideas of Soul." Therefore the student of

Christian Science has learned that suffrage is not to be taken

materially; that since God has created all there is, He in-

cludes true suffrage in His infinite creation; and it is neces-

sary to know it as the divine idea in Mind; and that it is not

a material something that is subject to change and decay.

The commonly accepted meaning of suffrage is the privilege

of voting; and, naturally enough, woman's suffrage gives the

right to women to vote. The thought of voting usually

brings the thought of going to the polls or to a booth on a

specific date to cast a ballot; and the ballot is usually a list

of names on a strip of paper, upon which one's choice of

Now the student of Christian Science does not go to the

polls to do only this. This is a requirement of the day,

therefore it is conformed to; but before this paper ballot is

marked and cast, the realization must be gained that there

is just one ballot to be marked and cast, and that this ballot

must be cast for that which is in accord with absolute and

divine Principle; and there is no hesitation in doing this.

There may appear on the paper ballot many perplexing

questions, but there is just one answer to all these questions.

Mrs. Eddy writes in the Christian Science textbook,

candidates for various political offices is to be indicated.

This Science distinctly states, in the words of Mrs. Eddy

Woman's suffrage to-day is in the United States an es-

and more into her divine inheritance.

former restricted ways of thinking.

and that is that Principle governs, and this government is manifested. "Science and Health with Key to the Scriptures," (p. 268):

"In the material world, thought has brought to light with

of the real, to the spiritual cause of those lower things which give impulse to inquiry. Belief in a material basis, from

which may be deduced all rationality, is slowly yielding to

the idea of a metaphysical basis, looking away from matter to Mind as the cause of every effect. Materialistic hypotheses challenge metaphysics to meet in final combat. In this

revolutionary period, like the shepherd-boy with his sling, woman goes forth to battle with Goliath." To-day woman

does go forth; she indeed goes to the polls to battle with Goliath, but she goes clad in the armor of divine intelligence;

for she is letting God's law direct her and she does not fear any of the material questions, or amendments of proposed

autocracies; these usually have a delusive promise, but in

The healing power of the Monitor is incalculable. It reaches the waste places of belief, cleanses the Augean stables of discord in the press by giving a more metaphysical viewpoint of what is happening in art, literature, sport, politics, and social organizations. I know of the healing power of this daily paper through its advertising columns. A sense of lack of labor and supply has been healed, domestic help has been sought and found-through the desire to advertise in the Monitor-before the advertisement has appeared, which proves the ever presence of Truth, and that the same law is operating of which Isaiah spoke in prophecy, "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear," followed by the fuller knowledge and certainty of spiritual healing which Jesus expressed when he said, before the raising of Lazarus from the dead, "Take ye away the stone," —meaning, Lift up your conception of what constitutes life and man,-and in the prayer of gratitude: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." His absolute knowledge of the ever availability of infinite Mind to heal the sick and raise the dead was the basis of his demonstrations. The Monitor is certainly filling a unique place among newspapers. demonstration of our Leader is welding together the best happenings in the world and giving to mankind a view of events from a metaphysical standpoint, uncovering the error and healing the sore places by pouring on the balm of Gilead-Truth. In the words of one of our beautiful hymns (Hymnal, No. 3) the Monitor gives to us a conception of the "Life that maketh all things new."

Salvation of the World

CECILIA HEILSTEDT HARRIS

DICTIONARY defines salvation as "liberation from A the bondage and results of sin; deliverance from sin and eternal death; redemption." In the Glossary of Science and Health (p. 593) Mrs. Eddy defines it thus: "Salvation. Life, Truth, and Love, understood and demonstrated as supreme over all; sin, sickness, and death destroyed." Then it is quite clear to a seeker of Truth that the salvation of the world must be accomplished by saving the world from sin, sickness, and death. On page 167 of "The First Church of Christ, Scientist, and Miscellany" we read: "The suppositional world within us separates us from the spiritual world, which is apart from matter, and unites us to one another. Spirit teaches us to resign what we are not and to understand what we are in the unity of Spirit-in that Love which is faithful, an ever-present help in trouble, which never deserts us."

Surely, then, the only world from which we need to be saved is "the suppositional world within us," or from wrong thinking and the acceptance of the various erroneous, material falsities about man and the universe. The condition of salvation, too, must be mental. Jesus worked out his own salvation. He healed the sick, walked on the water, and raised the dead, not to teach himself but to teach us the nothingness of matter and to show the way of healing and salvation.

Salvation has always been very closely associated, in the thought of the writer, with repentance, and much benefit was the result when it was seen that the Greek word from which the word repent is translated really means "to change one's basis of thinking," for this simplifies the Biblical injunction to repent and be saved, and convinces us that to-day, as in years gone by, the world's greatest need is still a complete

change of mind. As we begin to think truly, correctly, God's thoughts, good about man and the universe, then we begin the working out of our salvation.

Salvation, then, yes, even the salvation of the world, resolves itself into an individual process or to individual progress and demonstration, and the problem which confronts the human race seems to be this: Each individual must learn, in the way that Christian Science teaches, to lay aside one by one all false suppositions about God and man and to accept one by one the divine facts, and thus come into the enjoyment of eternal good or a realization of heaven. The creator of the universe has created all for a purpose and from the least to the greatest each has its place to fill, and that place can be filled by nothing else. The harmony of the universe is complete when all creation is found in its place, and what could convey a better idea of heaven than the thought that everything in God's kingdom is perfect and occupies the place and fulfills the purpose for which it was created. How may I know that I am in my right place and doing the work that God would have me do? Surely the answer can be found in demonstration, for man must express good at all times, he must follow the Christ-idea, and give undivided attention to individual work, and then he will surely find that his place is in Mind and he will know himself to be what and where God would have him be. We learn that man's own well-doing, his very existence, is necessary to the harmony of the universe. We then commence to feel a true interest in all mankind and that in a sense we are our brother's keeper. We see that each one must work out his own salvation and that the best and only way to help others is to think rightly and to do right ourselves, for if thought is right, the words and actions must be right also. Could there be a holier motive than the desire to know and to be what God would have us be? No thought of selfishness lurks in such a desire, for in Truth no individual can trespass upon the rights of another. The importance of individual work is great and our greatest and best contribution to the world is faithful and consecrated right thinking.

God's kingdom is at hand. "Now is the day of salvation," and in proportion as the fact of spiritual existence forces itself, through individual demonstration, on the world, in that proportion is the salvation of all humanity drawing near. Jesus' many demonstrations and his complete victory over death conclusively proved the truth of his teaching, that the reign of divine Love is forever and everywhere supreme. And so to-day to him who continually dwells in the realization of the Father's ever presence, though he lives in the world he is not of the world. Strong in the consciousness of the allness of God he fears no evil. In the twenty-first chapter of Revelation the apostle John tells us, "And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away." He saw the heaven and the earth which God created, the only world there is, or ever can be-

The Omnipresence of God

L. MEARNS FRASER

ONE of the strongest safeguards against fear is the understanding of God's omnipresence. The psalmist has expressed many times the sense of comfort and security that attends this knowledge. In triumph he sings: "If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me."

Christian Scientists can echo David's words. If we

the seeming shadows."

are in great happiness, the sense of insecurity and fugitive-

ness that seems to accompany human joy is banished when

we remember that the divine Mind is never farther from us

at one time than at another, and that "in thy presence is

fulness of joy; at thy right hand there are pleasures for ever-

failure, of sin, of wasted opportunities and unfulfilled promise

seems overflowing, and doubt and depression are besieging

us, we can still turn resolutely away from the tumult of error,

and claim, with persistence and calm assurance, the omni-

presence of God. The nightmare of error vanishes as we

become conscious of the only real presence. Sometimes when

we are apparently far away from all other students of Chris-

tian Science, error tempts us with the thought that some

trouble may arise that our own understanding is insufficient

to meet. Then the knowledge of God's ever presence is a

source of strength and courage; then we turn from the false

mental suggestion with the fervent assurance that divine Love

is ever with man, and that God knows no unconquerable

problems. Nothing can harm us when we joyfully realize

that we are alone with God, as one of our hymns has it, "amid

We can claim God's omnipresence in spite of belief 1-: in the presence of His opposite, of discord, hate, sickness, X230 or death, as these are rejected. Let us remember that we have, now and always, the power to reject every false claim D. of error. When we do our work of rejection and selection ir the aright, we become conscious of that fullness of joy which Mrs. Eddy has expressed in the wonderful verse of her hymn,

• : : (fr. *--

....

PAUL in his first epistle to Timothy said, "Fight the good fight of faith," and later on in his second epistle, "I have fought a good fight." It is now a demonstrated fact that,

just as there is a rule governing the composition of music with all its diversity of expression and a rule governing and elucidating all problems in mathematics, so the universe including man is governed and supported by divine Principle, God. This being so, it behooves us as intelligent beings to find out all we can regarding this divine Principle. Christian Science declares that this divine Principle is Mind, Spirit, and that His creation is purely spiritual. It supports this

and sickness and in making mankind better, happier, and healthier. Why, then, any need of a fight, even a good fight? In one dictionary the definition of the word fight is "striving

for victory. To-day the very air seems impregnated with evil suggestion, evil because contradictory and having no certain foundation. It is suggested on the one hand that our country in-

crease its army and navy expenditures; that enemies lurk

ready to pounce upon us and annihilate us; on another, that we do not need to arm because we are so strong that no one would dare molest us. It is suggested that we restrict immi-

gration because so many undesirables are coming to our

[487]

shores, and that we invite immigration because the farmers are short of help. It is suggested that our government intervene in the affairs of other countries, and that we also stand

for self-determination. One thing we should all certainly stand for and that is the right to do our own thinking; but to

obtain this right may seem to require at times a mental

struggle.

It is even suggested that students of Christian Science should do this and do that and in fact everything but mind their own business. Every faithful student of Christian Science has his own business to attend to, and that business is God's business. Any one who accepts false suggestion and constantly interferes with another's problem will reap what he sows. Paul again says, in his epistle to the Ephesians, "We wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darks ness of this world." It is therefore clear to the student of Christian Science what this good fight is. It is not a fight against flesh and blood, for they are outside the realm of metaphysics, the arena of the Christian Scientist. It is a spiritual fight against principalities and powers, alias mental sug-

gestion. Why does this fight seem necessary? Because mental suggestion is ever whispering the lie that God is not the only power and source of supply, but that man is one of an innumerable multitude of beings struggling for supply and knowing not where to find it. Mental suggestion has its inception in the carnal mind, and a struggle seems necessary at times to discriminate between such suggestion and the thoughts which emanate from God. Jesus said, "Every plant, which my heavenly Father hath not planted, shall be rooted up." The rooting up of evil suggestion after it has once been planted requires laborious effort, and it is therefore wise to be on guard against allowing the suggestion to take root.

Why is this fight a good fight? Because it is a struggle to establish for one's self the fact that God, good, is All-inall. This struggle brings only good into the lives of those taking part in it, and strengthens and ennobles their characters. Above all, it is a good fight because it is God's fight and for His glory, and so there can be only victory for the one taking part in it. Mrs. Eddy says in her book, "Science and Health with Key to the Scriptures" (p. 4): "The habitual struggle to be always good is unceasing prayer. Its motives are made manifest in the blessings they bring,blessings which, even if not acknowledged in audible words, attest our worthiness to be partakers of Love."

[Written for the Sentinel]

Vision

CHRISTINE EMERY

TRUSTINGLY I lift my eyes Beyond the confines of the way, And see in brightly glowing skies, The symbol of a better day.

I see a way made straight and plain, Where homely tasks are glorified, Each moment is a conscious gain, When Life and Light are recognized.

What joy it is for us to know The Love that makes anew each morn, And, radiant in the sunset glow, Fulfills the promise of the dawn.

Refinement

The whole of every man's struggle for spirituality is a process of mental refinement. Hourly the dross of mortal mind is applied to the touchstone of demonstration, and by the result the individual is able to estimate his progress. The Bible makes this clear in a particularly well-known passage, though it must be admitted that the meaning is almost ingeniously hidden in all English translations. It is in the parable of Dives and Lazarus, where the Authorized Version says of the former, "And in hell he lift up his eyes, being in torments." Now, in the first place, the Greek does not say in hell, but in Hades, and, in the second, it does not say in torments, but on the touchstone; two differences vital to an understanding of the meaning.

Hell is a theological term invented to fulfill the requirements of dogma, and is connected with the adjective eternal, which is itself a mistranslation of a Greek word meaning agelong; again quite a different thing. What Jesus said was, then, not in hell, but in Hades, a phrase the meaning of which would be perfectly comprehensible to his audience. There was nothing final or eternal about Hades. It was simply the plane of existence to which all the dead passed to await the last judgment; it might be a place of torment, but there was no necessity for it to be. It was not exactly what Mrs. Eddy means by probation, when she writes, on page 291 of Science and Health, "As death findeth mortal man, so shall he be after death, until probation and growth shall effect the needed change." It was something more final than that. It was a place, as it were, of anticipatory heaven or hell for the minds of the dead. As for the word torment, the gospel is very explicit. What it says is, "on the touchstone." Now the touchstone was the slab of marble or black granite to which the refiner applied the quartz, after he had removed it from the fire, to test it for gold. The expression was a common enough one to the translators of the authorized revision; no reader of Shakespeare could avoid acquaintance with it:

O Buckingham, now do I play the touch, To try if thou be current gold indeed.

It is an example of the suggestive force of theological dogma that the revisers should have rejected its obvious and natural meaning for an altogether forced one.

What had happened to Dives was very simple. He was in Hades on the touchstone. He was experiencing, that is to say, in awaiting judgment, the torment of fear and regret for wasted opportunities on earth. The touchstone was the ability, forced upon him, now that the mesmerism of the old sensuality had ceased to act, to separate the dross of mortal mind from the gold of spiritual realization. The refiner's fire was his awakening so late to the promptings of conscience, and the perception that he had wasted all those years of primary opportunity in the futile vanity of purple and fine linen, and the gratification of his appetites with sumptuous fare. All this lost time might have been devoted to the labor of mental refinement, which is, after all, only the re-

morseless subjection to righteous judgment of every thought and action of a man's life.

The human mind indulges in a judgment of fashion, sets up a standard of class distinction, and separates its gentleman from the mob, as representing the finished product. Refinement, however, from any point of view must be a mental process. Cleanliness, as Charles Wesley once said, is next to godliness. But this is only because it is a mental cleanliness; there is a mental dirt inseparable from your Brummell as well as from your Caliban. As Lord Tennyson said, in a moment of passion,

What profits now to understand
The merits of a spotless shirt—
A dapper boot—a lily hand—
If half the little soul is dirt.

Refinement, then, is a mental process: it is, metaphysically, a spiritual process. Press it to its ultimate conclusion, and you will find that it is the understanding of Love. The Baptist knew precisely what it meant, when he thundered at a deaf generation, "I indeed baptize you with water unto repentance: but he that cometh after me is mightier than I, whose shoes I am not worthy to bear: he shall baptize you with the Holy Ghost, and with fire: whose fan is in his hand, and he will throughly purge his floor, and gather his wheat into the garner; but he will burn up the chaff with unquenchable fire."

It is this process of separating the gold from the dross, by fire, that the refiner practices. "The furnace," Mrs. Eddy says, on pages 66 and 67 of Science and Health, "separates the gold from the dross that the precious metal may be graven with the image of God." This is the coinage of Principle, and in the proportion in which the dross of materiality is burned away, this hall-mark of Truth is set even on the human being. Thus it is recorded of Moses that, when he came down from the mount, he "wist not that the skin of his face shone while he talked with him;" and thus the First Gospel says of Christ Jesus, in the transfiguration, "his face did shine as the sun, and his raiment was white as the light." Even the man rescued from appetite or from crime shows physically the mental depths of his regeneration. What, then, does the world mean, in its senseless effort to counterfeit Truth, when it talks of the refinement of a gentleman? It may be said at once that it does not know what it means, and that that is why it has never been able to agree upon a definition. Tennyson in one remorseless poem, hackneyed unmercifully by quotation, has crushed the definition of descent, borrowing his lightning, it is to be suspected, from the older wisdom of the socialistic priest, John Ball:

> When Adam delved and Evé span Who was then the gentleman?

"What is it to be a gentleman?" Thackeray asks, and he proceeds to answer with a catalogue of the virtues. Yes! It is these, all of these and more, for it is something Thackeray himself did not altogether understand. It is a knowledge of Principle, which is Love.

The man who has been baptized with fire is the man whose materiality is perishing before the refining influence of Spirit. Spiritual refinement, then, and there is no other, comes in the degree in which mortal mind is destroyed, and the image and likeness of Principle begins to loom through the vanishing clouds of the senses. If any human being wishes to learn how to become a gentleman, the way can be found on page 295 of Science and Health, "The mortal mind through which Truth appears most vividly is that one which has lost much materiality—much error—in order to become

a better transparency for Truth. Then, like a cloud melting into thin vapor, it no longer hides the sun." Was not Tennyson stumbling toward this definition when he wrote,

The gardener Adam and his wife Smile at the claims of long descent?

But to understand this, as Lord Tennyson certainly did not understand it, it is first necessary to understand what the writer of the First Epistle of John means by Love.

FREDERICK DIXON.

For the Beginner

ONE turning his attention to Christian Science for the first time needs, from the start, to study the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. It is, of course, logical to read this latter from beginning to end. In no other way can the student be sure of familiarizing himself with all that the textbook contains. Such a reading should be deliberate. It is better to study carefully as one proceeds than to read many pages rapidly at a sitting. One may find it helpful to use a good dictionary, for the considering anew of the meaning of even the simpler words used sets one to reasoning the more for himself. Yet the student need not think that, from a single perusal of the book, with the aid of a dictionary, he will understand all of Christian Science. Each rereading will give him new glimpses of the truth there explained, as he comprehends more of the infinity of Principle. As the student progresses, he will naturally accept what he understands, and patiently expect further illumination of the rest while he continues.

The basis of Christian Science is that divine intelligence governs the true man and expresses itself as right action. Intelligence is, of course, much more than human intellect or brain. The term, rightly used, means the Mind that is entirely good. As Mrs. Eddy says on page 469 of Science and Health: "Intelligence is omniscience, omnipresence, and omnipotence. It is the primal and eternal quality of infinite Mind, of the triune Principle,—Life, Truth, and Love,—named God." The very fact that one is alive and intelligent, in any sense of the word, proves that intelligence exists. Christian Science reveals that the governing Principle of living is truly intelligent, and that the understanding of this Principle is practical for the solving of every problem in everyday experience.

Divine intelligence is real, tangible, and usable. Being good, it must express itself as harmonious action. Inactive intelligence would be a contradiction of terms. Infinite Mind produces right action without limit. In the Glossary of Science and Health (p. 588) Mrs. Eddy gives this definition: "Intelligence. Substance; self-existent and eternal Mind; that which is never unconscious nor limited." If the divine Mind could be inactive or unconscious, it would not be intelligent. The conscious action of the Mind governing true being is unlimited, neither too much nor too little. Just to know that there is infinite Principle, or Mind, producing only orderly action here and now is good in itself. If the one considering Christian Science for the first time comprehends nothing more than this, he will find, nevertheless, that this simple reasoning is a solid basis on which to work. This reasonable foundation need not even be expressed in these particular words, for the statement of truth is infinite; but in some way one needs to understand from the beginning that there is only one controlling power and that this power expresses itself as

A seeming disease or trouble of any sort is a supposition

of inaction, overaction, or disturbed action-often a combination of these discordant beliefs. The remedy, then, is right action, and right action will be found and demonstrated, through Christian Science, only as the effect of divine intelligence. Once the student understands that infinite intelligence does govern the true man and does manifest itself as exactly right activity, he is sure to prove that a sense of wrong action, whether seemingly too much or too little, subsides in the presence of the truth thus comprehended. This is how the healing process of Christian Science goes on. The true idea of man takes the place of any false sense of things, thus improving conditions of living. As Mrs. Eddy explains on pages 82 and 83 of "Miscellaneous Writings": "Immortal Mind is God, immortal good; in whom the Scripture saith 'we live, and move, and have our being.' This Mind, then, is not subject to growth, change, or diminution, but is the divine intelligence, or Principle, of all real being; holding man forever in the rhythmic round of unfolding bliss, as a living witness to and perpetual idea of inexhaustible good." What constitutes healing, as revealed through Christian Science, is the realization of this truth in actual experience.

Each one turning to Christian Science finds from the beginning of his interest, of course, that he needs thoroughly to study in advance the weekly Lesson-Sermons given in The Christian Science Quarterly. Though a rightness of desire often brings about an immediate healing without the seeker's comprehending much of Principle, Mrs. Eddy's provisions for thorough and orderly study have been demonstrated to be of the utmost benefit to each one who wishes to understand how to use Christian Science to insure for himself the experience of true health, happiness, and progress of every sort. What each one needs is not a mere means for the curing of supposedly physical ills, but a true standard for all living. To be healed spiritually, in the full sense of the term, one must prove the wholeness of idea manifesting Principle. The demonstration of complete divine intelligence unfolds eternally. Through consecrated persistence, each student of Christian Science is entitled to experience not only relief from specific difficulties but protection from any suggestions of trouble that may at any time present themselves. Every condition that may appear to one is, after all, only an opportunity for progressive activity in accord with Principle. When one works with unremitting appreciation of his true opportunity, the whole of living is a joy. Each seeker is entitled to expect immediate results; but each seeker must also be willing to be infinitely patient. It is indeed true, both for the beginner and for the one who has been studying Christian Science for some time, that "whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."

GUSTAVUS S. PAINE.

*** * ***

[Written for the Sentinel]

Daniel

CHARLOTTE BRUNER

I SING of Daniel, God's true child!
So steadfast did he stand for right
In error's dark and fearful cave,
With lions crouched alert to spring,
That through the ages he has been
A comfort and a joy to all.
And so, when clouds of mortal sense
Confuse my thought, I think of him
And turn with him to Truth and Love.

Testimonies of Healing

When I first came to Christian Science I was in a hopeless condition, having almost every ill that flesh is heir to, including nervous prostration, stomach, and other internal trouble, and eye trouble, and was in such a weakened condition that my father would carry me around like a baby. I was then fifteen years old, was extremely thin, and was so nervous that I could only bear my mother and doctor in the room. The doctors had given me up, saying I would never be well again. I underwent an operation but to no avail. I would pray to God over and over again to make me well as other girls. I knew He could if He only would.

Then my sister told me about Christian Science. My parents said I might try it for three weeks, and if I was not well in three weeks we would not try it any longer. When the three weeks were up I was not any better, but the good seed was planted and I knew I could be healed by Christian Science. I began to have courage, but grew worse when the treatments were stopped, and drifted along for about three months; then I persuaded my parents to let me try Christian Science again. They agreed, but not until they thought I was going to die. I took treatments for one whole summer, and gradually grew strong and well and am now at normal weight. My healing has been slow, but I do not know what nervous prostration is any more.

My eldest child when two years old had a very bad spell of stomach trouble, while teething, and was pronounced dying, but Christian Science treatments were given and in half an hour she asked for food; in three hours every bit of the fever was gone and she was quietly sleeping.

I thank God for Christian Science, and am grateful to every one who has helped me along the way.

(Mrs.) S. L. THOMPSON, Eula, Oregon.

4

Having received much good from the testimonies given by those who have been healed through Christian Science, I consider it not only a privilege but a duty to give my testimony that others may be benefited thereby. It was some years ago, while in the eastern part of the United States, that I attended a Christian Science meeting for the first time, and although not in search of physical help I was in search of a true understanding of God, as I had always had a deep desire to know the truth that makes free, but had been unable to gain a knowledge upon which I could rely for an answer to my questions, or to meet my needs.

I was very much impressed with the way this meeting was conducted; there was such a manifestation of love, and the testimonies of healing that were given were a great surprise to me, for until that time I did not know that the healing power of Christ was in operation to-day as it was nineteen hundred years ago. I had often wondered why this power had been lost, when reading of the many miracles that had been performed,—of the dead raised to life, sight restored to the blind, the lame made to walk, and all manner of sickness healed, and how this protecting power had saved Daniel from the lions, and the three Hebrew boys from the fiery furnace; and many other wonderful proofs of the sustaining power of Truth as recorded in the Scriptures.

Upon leaving this meeting I was satisfied I had found what I had been in search of for years. I obtained a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and, to my great surprise, through reading it found myself healed of rheumatism and also of the need for wearing glasses, which I had worn for several years. To

me this was proof of the healing power of Christian Science, and brought to my thought the imperative command of our Master when he said: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Also his words: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free."

Since that time I have relied on Christian Science for my every need and have experienced many physical healings, most of which have been through absent treatment. I am thankful to God, and I am grateful to Mrs. Eddy for the years she spent in preparing her works, and for giving them to the world, whereby we may gain a true understanding of God and apply it in our daily lives.

WALTER S. SHORNICK, Kansas City, Missouri.

4

It is with a deep sense of gratitude that I desire to testify to the healing power of Christian Science. About eleven years ago I took up the study of Christian Science, after having been a semi-invalid for many years. I had grown accustomed to the physical suffering, but mentally I suffered intensely. One disappointment after another followed, until Christian Science was presented to me.

From the very first day that I began to read the textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I began to catch glorious glimpses of the truth. Peace and, best of all, a greater sense of love, took possession of me. As I continued to read I was healed of astigmatism for which I had worn glasses for fourteen years. Chronic sick headaches, tonsillitis, acute indigestion, and heart trouble one by one disappeared simply through reading the Bible and Mrs. Eddy's writings.

Each step in Science has been so wonderful to me. I am grateful for class teaching, which has given me a demonstrable understanding of Christian Science; also for the Christian Science literature. On page 570 of Science and Health, Mrs. Eddy writes: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences." Every piece of Christian Science literature we give out is that cup of cold water.

(Mrs.) Rose M. Keeler, Long Beach, California.

4

Many are the blessings which have come to me since I began to study Christian Science, and I wish to send my tithe to the storehouse as a small expression of gratitude. In a certain small country village there is a little thatched cottage in which a man and his wife dwell. The world would count them poor, but they are not really so, for they have their Bible and their textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, both of which they dearly love. They would have been very happy had it not been for a discordant condition close by, which threatened to destroy the harmony in the cottage and even the inhabitants themselves, and there was much fear. One day I happened to call at the cottage and I left a copy of the Sentinel. A few days later the woman told me of a beautiful article in it called "At 'the ford Jabbok.'" I called her attention to the story of Jacob in Genesis and pointed out what Mrs. Eddy tells us of Jacob on page 308 in our textbook. Then I went home to study the article and my books.

The next morning my maid awoke me and told me that her companion had been ill all night with a very bad threat and could hardly speak, and that help was needed. So

[490]

along with some other men. We started the next day and had

to walk three miles on broken duck boards before reaching

a road, and by that time I had no strength left and sat down

on the roadside, seemingly done for, with a ten-mile walk

in front of me and full equipment to be carried. After resting

for a time I started, the other men having left me with the

cheering assurance that at the rate I was going it would

take me days to get there. Feeling ill, and absolutely de-

serted in a devastated area, I did my best to hang on to the

truth. To my joy a limber came along and the man gave

me a lift to within two miles of my destination, and from

there I was able to get a further lift. I was in a dugout

with twelve other men, and instead of its being a rest it was

the reverse, as the men spent every available minute drink-

ing. By getting up at 6 a.m. I managed to get Science and

Health and read for an hour each day. Day after day passed

and there seemed to be little or no improvement in my own

health or my surroundings, but at the end of a fortnight I

suddenly became aware that I was perfectly well again,

also my companions were healed of the drinking, and the

remaining fortnight was spent happily. For these proofs

of the healing and redemptive power of Christian Science,

for all that Mrs. Eddy has done for mankind through her

For a long time I have felt I should send a testimony to

the Sentinel, acknowledging the many wonderful proofs I

have had of God's care. In our home, where there are four

children, we always rely on God's loving care for them. I

have seen measles, scarlet fever, diphtheria, colds, bilious

attacks, bee stings, and other ills disappear through the

power of Truth as taught in Christian Science. When I began

the study of Christian Science I was instantaneously healed

of an internal trouble, but did not understand why or how I

was healed, and put Christian Science aside until I had

further need for it, when I had to take it up again in earnest

through the daily study of the Lesson-Sermons, for the

privilege of attending church services, and for the loving

help of practitioners, who have never failed to respond when

called upon. I am also very grateful to our Leader, Mrs.

(Mrs.) C. F. Wonderling, Mount Vernon, Ohio.

"Whatever it is your duty to do, you can do without harm

to yourself," Mrs. Eddy says on page 385 of "Science and

Health with Key to the Scriptures." I have proved this

statement to be true, as well as many others in the Christian

Science textbook. My gratitude for Christian Science and

for the periodicals which Mrs. Eddy established, grows

ing the epidemic of influenza, leaving her alone with her baby

boy. She came home to live and it became my duty to care

for the baby while my daughter took up her former work

Some time ago our daughter's husband passed on dur-

greater every day, and I wish to express it publicly.

Eddy, for showing us the right way.

I am indeed grateful for the understanding I have gained

for the healing of a stubborn attack of stomach trouble.

JOHN P. SCOTT, Boston, Massachusetts.

writings, and for the periodicals I am deeply grateful.

clearly did the lessons stand out which had been learned the

previous day that the girl was instantaneously healed, as

were two others the same morning. When I called on my

friend at the cottage I found all fear had disappeared, for she

was learning the truth about man. The discordant condition

has been entirely overcome and peace and joy abound. This

is only one of many experiences where a Christian Science

that a right understanding of Christian Science does solve

for a logical and demonstrable religion, which came to me

when I needed it for my children, and for showing me the

regenerating power of Christian Science. "God said, Let

there be light: and there was light." And this light is show-

ing us more and more clearly the things we never knew before.

We learn to go forward, forgetting the things that are behind,

and as we partake of our inheritance we experience something of the joy and peace which Jesus promised. I know that only

by letting my light shine can I express my gratitude for

Christ Jesus the Way-shower, whose life demonstrated the

truth which frees us from bondage, and also for Mrs. Eddy,

whose purity, courage, and consecration enabled her to give

us the means by which we can understand the works of our

Master, so that we can begin to follow in his footsteps and

obey his words. For all I have learned and am learning I

I wish to express my gratitude for all the joy and happi-

I owe profound thanks to God and gratitude to Mrs. Eddy

the many problems which confront us day by day.

...

7

six months, and I can truthfully say that my health is better, our home very harmonious, the sunshine of Truth always shining, and Christian Science has met every problem that comes up with the care of a young child. He is a sunny, happy dispositioned boy.

Christian Science came to me in the year 1901, and since that time it has been my only physician. I have seen financial needs met, and many physical healings, also those of grief, fear, worry, and anxiety. Our son was healed of typhoid fever when he was eleven years old and of appendicitis when he grew to manhood. When he left for France in 1918, Christian Science was our source of comfort, and his protection. Daily it becomes clearer to me that the only change there is, is that from error to Truth, from sickness to health, from ignorance to intelligence, from inertia to right activity.

I am grateful for all the help ever given to me through practitioners and friends, grateful for the Christian Science periodicals, and for the life of our revered Leader, Mary Baker Eddy, and indeed grateful for my understanding of the omnipresent divine Mind, God.—(Mrs.) Clarissa Sperry Getten, San Francisco, California.

I wish to add my testimony to that of my mother. Christian Science has been a constant help to me ever since Mother has been studying it, and in looking back over that time I can see that I have been led from discord to harmony many times, and protected, even when my own thought was not quite clear, through her earnest efforts to maintain harmonious thought in the home.

In the recent sense of loss which I have had to meet, Christian Science has been everything to me, and in my effort to overcome grief I have grown a good deal in my understanding of it. When I am brought in contact with other people who have had this problem to face without the understanding of divine Love which comes through the study of Christian Science, I am filled with great gratitude that I have even a slight knowledge of what it teaches. I am indeed grateful for the help and blessings we have all received since Christian Science came into our lives.

(Mrs.) GERTRUDE GETTEN CAPRON.

As my mother has testified, I have been healed of typhoid fever and appendicitis as the result of the application of Christian Science. While in France, Science was the means of bringing me safely through each experience. It has been proved to me that Christian Science is very practical and needs only to be understood to be demonstrated.—Albert S. Getten.

With a heart full of gratitude to God, also to Mary Baker Eddy, the Discoverer and Founder of Christian Science, I wish to testify to all the good which an understanding of the truth as taught in Christian Science has brought to me. Indeed, this beautiful religion of love has changed my judgment of people and conditions and has brought into my life more harmony and peace than I had ever known. I am especially happy in knowing that "with God all things are possible," that there are no erroneous conditions or circumstances which cannot be overcome with the knowledge of the omnipotence and omnipresence of good.

Knowing that one with God is always a majority, I have been able to overcome extreme diffidence and sensitiveness, which had caused me a great deal of suffering, and also to rise above worry and anxiety. I understand more and more clearly that it is our unity with Principle, and not material things, which brings happiness. The conviction that divine Love can set a table before me, even in the wilderness and in the presence of so-called enemies, helped me to overcome a sense of trouble and of discouragement as well as a painful sense of separation during the late disturbed times. I was firmly convinced that those who are dear to me and from whom I had not heard for a long time, were in safety, "under the shadow of the Almighty," and that no evil could befall them.

I am also grateful for physical healing. I no longer fear the effects of a too cold or a too warm climate; ailments and pains have disappeared when the liberating truth has been declared and realized. I give thanks to God for His protection and many blessings, and especially for having led me to the truth which frees and saves. My great desire is to progress in the understanding of Christian Science so that I may be more and more actively "about my Father's business."—(Miss) M. DE REHEKAMPFF, Nice, France.

4

The relation between sin and sickness emphasized in the Bible and in "Science and Health with Key to the Scriptures," as well as in Mrs. Eddy's other writings, I think was never made plainer to me in my own experience than it was a few years ago in destroying a cold for myself which seemed to be settling upon my lungs.

I was going out to meet some friends. The day was cold, with snow on the ground, and the air seemingly full of frost. According to the mode of the time I wore my coat open at the neck as usual, enjoying the air against my throat. After meeting with these friends with whom I had an appointment, some other people joined us against whom I held some ill will, and I thought justly. Upon meeting with them I was conscious of a sense of resentment, which I failed wholly to conceal, with the result that I felt confused and much humiliated. Later on, when returning home, I noticed that the cold air struck me sharply; I shrank from it and involuntarily protected my throat. Upon reaching home a severe cold was manifested and was settling on my lungs. As I had had experiences of this kind before taking up the study of Christian Science, the symptoms were all familiar and I knew what was awaiting me unless I met it through my understanding of Christian Science. I went to work earnestly to examine my thoughts. In reviewing the experiences of the afternoon I saw how I had allowed a sense of hatred to take possession of me. And as I quietly worked, with truth and love replacing the suggestions of error as they came to me, I was healed. How grateful we should be for Christian Science, for it goes to the bottom of all our troubles and proves to us that we do have to pay for our wrong thinking, not only mentally, but physically.

(Miss) SARAH ALICE LEACHMAN, Wichita, Kansas.

4

I would like to express my gratitude for Christian Science through the pages of the Sentinel. I began the study of Christian Science after an almost instantaneous healing of heart trouble. I was in bed and so weak I could only hold my Bible up long enough to read a word or two at a time. A practitioner was called and with one treatment I was able to get up the next day and call her over the telephone. A few days later I called her again for treatment for a bowel trouble of lifelong standing. She assured me it would be all right and the next day I knew I was healed. I then poured out all my medicine and have not used any since. The practitioner lent me her vest pocket edition

of "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I immediately told her my eyes were too bad to read such small print. She just smiled and a few days later, finding my weak eyes healed, I sent for the pocket edition. And so I could write on and on of healings in our home.

I am grateful to God, to Mrs. Eddy, to the loving practitioners, and to all who have helped when the way seemed so dark, and I pray that I may know more of this wonderful truth that makes men free.

(Mrs.) Laura Brunsma, Indianapolis, Indiana.

4

I sometimes wonder if we express enough thankfulness to God and gratitude to Mrs. Eddy, the Discoverer and Founder of Christian Science. I am very grateful for the inspiration, strength, and comfort which Christian Science has been and is to me. I first became interested through my daughter, who had been healed of nervous prostration in its worst form. My first healing was of chronic constipation, nearly four years ago. I have not taken any medicine since.

I am very thankful for all the blessings I have received; thankful to God, and grateful to Mrs. Eddy and to the dear friends who have helped me.

(Mrs.) Mary Daw, Glasgow, Montana.

4

I well remember the first demonstration I experienced of the healing power of Christian Science. It was at a time when I was threatened with a second visit to the operating table, and a friend had asked me to try it. I was very skeptical, and had had but two treatments, when one arm was badly injured in a coasting accident. One treatment from a practitioner enabled me to use it without pain or inconvenience. This healing convinced me that Christian Science is the scientific teaching of Christ Jesus, the truth that sets us free from all mortal discords if we but follow its teachings faithfully. Some of the benefits we as a family have received are: the healing of influenza, of a tubercular condition of the throat, of sprains, of blood poisoning, and of a fractured skull. In the case of the fractured skull, the patient sat up in bed playing and talking on the fourth day, all fear having been overcome for the parents.

One finds as he progresses in the study of this great truth that physical healing is secondary, and the spiritual awakening, through which we gain the peace which passeth understanding in the knowledge that divine Love does meet every need, is primary. I am grateful that through divine inspiration Mrs. Eddy was enabled to give to the world the spiritual interpretation of the Bible, which has become our daily guide. We do not realize the progress made through daily study until a situation arises when we have to depend upon our own understanding to demonstrate the truth.

Some time ago, when on a railway train, I rose early and, not caring to ring for the porter and perhaps awaken the other passengers, I attempted to close the car window. A defective spring caused it to fall, badly crushing my thumb. My first impression was darkness. Then I began to repeat the "scientific statement of being" (Science and Health, p. 468), and was able to raise the sash, bind the thumb with a handkerchief, and use the hand without pain. Twenty-four hours later when at home I replaced the travel-stained handkerchief with a clean bandage. In one week the flesh was healed and the bone became normal shortly afterwards. I thank God that the teachings of the Bible have been made demonstrable to us in this age.

(Mrs.) Evelyn C. Ribbel, Omaha, Nebraska.

With gratitude for the blessings that have come to me through Christian Science, I am writing this testimony, giving a few of the many healings I have experienced since becoming interested in it. I had a very serious trouble with my eyes and was obliged to have them bandaged, which necessitated my being fed, and led about the house. A physician visited me every day for more than a week and treated my eyes, but there was little improvement. After a change in treatment, which was continued for two months or more, I apparently recovered, but some time later suffered a relapse. At this time I was living in the home of a Christian Science practitioner and I immediately asked for help and was healed in one treatment, and have never had a return of the trouble. In a few hours after treatment the pain had subsided and by evening the inflammation had disappeared. The following day no trace of the trouble remained.

At another time I was living with friends who were not interested in Christian Science and who insisted upon my having a physician when seriously ill with a condition that confined me to the bed for two weeks with a nurse in attendance. After suffering intensely, with no relief whatever from the medicine prescribed, I discharged the physician and threw away all medicine, and asked for help from a Christian Science practitioner. The physician was dismissed on Saturday morning and the practitioner was called Saturday aft-The following Monday morning I was up and dressed and went to the table for my meals, and on Wednesday I went to the practitioner's office. I was also healed of colds that appeared every winter, confining me to the house for weeks at a time. That fear has been entirely overcome. A very disagreeable and painful eruption covering hands and face was overcome in a few treatments. These are only a few of the many, many healings I have had through Christian Science, proving God's loving care for His children in every need. I am very thankful to our Father-Mother God, to Mrs. Eddy, and to the practitioners who have so lovingly and patiently helped me.

(Mrs.) Agnes B. Heywood, San Jose, California.

٠

A deep sense of gratitude for what right thinling, as taught by Christian Science, has done for me, impels me to send this testimony. For only a short time have I been studying the Bible, with Mrs. Eddy's book, Science and Health, to explain it, yet in that time I have experienced several remarkable demonstrations. My little daughter cut her head very badly. My thought went first to the peroxide bottle and a bandage, then I was stopped by the remembrance of what I had been studying, and resolved to put, not Christian Science, but myself, to the test. The child and I talked it over together and applied the truth as we understood it. The bleeding stopped, the cut healed very quickly, and left no scar.

Another of our children, a girl of fourteen, was knocked down by an automobile. She escaped with only a bruised shoulder, although her clothes showed how perilously near the wheels had come to her. Was she only "lucky"? No; my knowledge of the truth tells me that this was just one more proof that God "shall give his angels charge over thee, to keep thee in all thy ways." I am grateful for the Christian Science literature, and for "Science and Health with Key to the Scriptures" by Mrs. Eddy, without which the Bible with all its treasures, God and His omnipotence, and Jesus the Way-shower, would still be mere Sunday accessories instead of daily comfort and confidence.—(Mrs.) Agnes M. Martyn, Roxborough, Philadelphia, Pennsylvania.

Signs of the Times

["The Mount of Temptation"—The Christian Science Monitor, Boston, U.S.A., Dec. 2, 1920]

In the fourth chapters of the gospels of Matthew and of Luke, respectively, accounts are given of what are known as the temptations of Jesus. These accounts are practically the same, although the order of the temptations is different. In both the active agent is stated to be the devil. Now the Bible is an Eastern book and in the East all qualities are personalized whenever possible, the winds, the stars, all were written about as if they were people; so the devil stands simply for evil quality, and the temptations are symbolic of the difficulties of all mankind. In the Glossary of "Science and Health with Key to the Scriptures" by Mary Baker Eddy (p. 589), "Jesus" is defined in this way: "Jesus. The highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality." On page 584 we find: "Devil. Evil; a lie; error; neither corporeality nor mind; the opposite of Truth; a belief in sin, sickness, and death; animal magnetism or hypnotism; the lust of the flesh, which saith: 'I am life and intelligence in matter.'" These definitions illuminate the Scriptural accounts of the temptations, and the accounts of how Jesus met and overcame them illustrate the method of resisting the temptation to believe in life and intelligence in matter, a point which sometimes seems obscure to mortals.

Jesus, the Bible says, was tempted in all points. Nevertheless divine Principle does not set these lusts in the way of His own children, in order to test them. Principle has made man perfect, in His own image, and has no need to test His own creation. The lust of the flesh is simply the belief that there is pleasure, life, and intelligence in matter, that is, apart from Principle, Spirit. Now until it is clearly known that divine Principle contains every possible expression of pleasure, life, and intelligence, mankind is tempted by its own ignorance of that fact. This ignorance, and the fear of it, is the so-called quality of evil, personalized in Eastern language as the devil.

The account of the temptation given by Matthew as the third and by Luke as the second, is wonderfully helpful when unfolded in the light of Christian Science. In this temptation we read the "devil taketh him up into an exceeding high mountain." On page 509 of Science and Health Mrs. Eddy says, speaking of spiritual creation: "The periods of spiritual ascension are the days and seasons of Mind's creation, in which beauty, sublimity, purity, and holiness-yea, the divine nature-appear in man and the universe never to disappear." Returning to the temptation in question, we read that the devil "sheweth him all the kingdoms of the world, and the glory of them; and saith unto him, All these things will I give thee, if thou wilt fall down and worship me." This description is clearly metaphoric; there exists no material mountain from which such a vision can be obtained, but the metaphor includes the thought that Christ Jesus had not ascended the mountain of spiritual vision so far as to make it impossible for him to see the kingdoms of the world and the glory of them. So long as these can still be perceived by sense testimony the claim of the lust of the flesh is that man's dominion is dependent on these senses. Just as the student of Christian Science ascends to perceive his power, through spiritual understanding, to reflect the dominion of Principle, so does this temptation claim to become active. The dominion promised by the lust of the flesh is the dominion of human will, and it may be likened to a slide down the mountain side. The moment one falls down and worships the lust of

the flesh, he begins to slide down backward, not seeing where he is going.

In the first chapter of Genesis we read that God gave man dominion over all the earth, hence the answer of Jesus, "Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve." When Jesus made this declaration he was filled with a scientific or true understanding of what he said, and before this clear spiritual understanding we read: "Then the devil leaveth him, and, behold, angels came and ministered unto him." If, however, the declaration of man's dependence on divine Principle is made without spiritual understanding, it is, to that extent, only a belief, and this belief opens the door for the inroads of the lust of the flesh insisting on the power of human will and claiming to prove its dominion by results. It therefore becomes necessary to distinguish between true dominion and false dominion. The true idea of dominion, even though already on a mountain top, sees more peaks farther on and is busy preparing to scale these. The false belief of dominion is sliding down nearer to the kingdoms of the world, becoming more and more material in its desires. It is always ready with fine excuses to account for the retrogression to human footsteps, and willing to account for the progress of others by saying that they are going with the wrong stream. The human mind is ever self-righteous, ever critical, ever reversing good, and above all ever falling down to worship evil.

From this simile of the mountain it is clear that progress can never be made by studying the slide, but by pushing on; there may be more difficulties ahead, but there is no necessity for going back to the old ones. The mountain top of ascending thought is gained by knowing the unreality of the evil that is past, not by believing in it. Lessons may be learned from past experience but only lessons of the availability of divine Principle. The next difficulty must be solved by the same reliance on Principle, not by human knowledge culled from the last. The only way to get permanently clear of the possibility of seeing the kingdoms of this world and being tempted with them, is to climb so high that they become invisible. Sense testimony then becomes incapable of deceiving because it is known as unreal. The individual will then have reached his highest present concept, dominion to know the unreality of what is called mortal mind.

[From a Letter in The Living Church]

The evidence of divine ministry is ever the same. "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them. And blessed is he whosoever [because of these things] shall not be offended in me." Healing missions do give offense. . . .

But nevertheless, when the church shall preach most of all to the poor, raise the dead, and heal the sick, account its ministers as stewards of the mysteries of God in response to the demand of the age, not to be judged of vestries in their giving the people what the Christ desires, there will be no lack of response to the call of the ministry.

[From The Sunday Herald, Boston, Massachusetts]

Gilbert K. Chesterton expounded "The Perils of Health" in his closing lecture at Jordan Hall last night [January 15], dealing with the subject largely from the point of view of civic liberty and offering many illustrations of how individual rights may be invaded by a too close official attention to personal well-being. . . .

Christian Science Sentinel

"It has been said," proceeded the lecturer, "that the is we real in doctor should be called the health adviser of the community. That is a phrase purely rhetorical, which seems to many to be a substitute for thought, but it immediately disappears under the pressure of thought. I have the profoundest respect for doctors when they are called doctors, but I will undertake to 'knock their heads off' if they attempt to offer themselves as health advisers. That means that my health is to be under their control and direction. See what is involved in this theory of general advice to the community. In England there has been an institution called the ministry of health, and all sorts of persons have attempted to be health advisers of the community. There is a great tendency to take seriously that kind of worship of health as a positive thing for the people. Not only is the general principle sociologically false, but the actual application of the movement in the modern world is extremely fantastic and disproportioned."

Mr. Chesterton finally warned against what he called neurer # 25 c "a very serious and dangerous tyranny," and told his audie malera :: ence that people are not rising as seriously as they should against interference with the dignity of the citizen, because HITT. they had been taught that revolt was wrong. "When a man they are 22 says," he proceeded, "that the state, which means the professional politician, should take care of the health of the citizen, he says something which, if he stopped to consider the meaning of human words, he would see was perfectly wild and ridiculous. It is of the very nature of health that it is intimate, private, involved in every little detail of life, affected by every occurrence of life. If you wish an official to take charge of the health of the citizen, it would be necessary for the official to be with the citizen day and night. You would have to have a policeman sitting at your bedside, looking to see if you did not snore, or sleep in unhygienic attitudes, or have too many windows open. would be shadowed all your life by this constable; you would be interfered with in almost every human function. In other words, you would be exactly in the position of a lunatic under the charge of a keeper. I have my own doubts as to who would be the lunatic, but there is a far deeper and more logical question here; it is: Who is the sane man? For, if the citizen is to have a keeper over him, who is to watch over the keeper, who is also a citizen? It would end in a long procession of one citizen following another, each man looking after the next in line. But, even if we suppose the process did not go to that length, we must suppose that any considerable application of it to human life is perfectly wild.

"That sort of interference is becoming very much more common than it used to be. You can all see it on every side. What is the most serious danger of all is that those who are indulging in it have no kind of test by which to resist the extravagance of their own conclusions. They have no ideals of liberty. They do not know by what principle men should be allowed to do this or be prevented from doing that; they can only watch them to see if they do things they think wise or unwise. You may watch one three-quarters of an hour even down to the details of gesture, costume, and voice, but if you have no fundamental conception of the rights of men to their souls and bodies, there is literally no limit to which this process may go. I feel a peculiar pleasure in delivering this inadequate defense of liberty in this city, which has so great a tradition of that ideal. We do not know much in England about American politics, and I am not going to criticize them. We know very little indeed about American history. But some of us do know something of the fundamental and original ideals on which your society was founded. And we do, I think, have the curious kind of sentiment of looking to this country as the seat of authority for those republican virtues and that republican idea of the citizen. In that sense, the rôles of the two countries are in a certain way reversed. Every English radical, and I am one, has always felt that it was from this country that came that strong and clear definition by which the republican ideal was made immortal among mankind."

[From National Health Insurance and the Medical Profession-by Frederick L. Hoffman]

In a recent report to the government (British) Sir James Mackenzie, director of the St. Andrews Institute for Clinical Research and the distinguished author of an epoch-making treatise on "The Future of Medicine," points out that the diagnoses made under national health insurance "are for the most part imperfect and statistics based upon them are misleading, because the classification is at present based upon morbidity changes which have been discovered after death." He observes further, "The incompleteness of medical knowledge at the present time is clearly shown by the fact that a very large number of patients who consult their doctor and who are incapacitated from work do not suffer from any disease referrable to the current classification or one which can be detected by physical signs." . . . There is unquestionably a growing demand for an impartial inquiry into all the facts of medical practice, whether affecting the insured or the uninsured population. . . .

The fact is often overlooked that the enactment of national health insurance in Great Britain was made to rest upon the claim that the system would materially aid in the prevention of disease and bring about in course of time a material lowering of the death rate. The war has naturally resulted in disturbed conditions which make an exact comparison of the present with the past a matter of difficulty. But regardless of the conflict of evidence it may be asserted without fear of contradiction that, in the broader sense, national health insurance during the nearly eight years of its operation has not directly contributed toward this end in view. I cannot do better than quote the views of the Grand Master of the Order of Druids, one of the most important friendly societies, as set forth at the sixty-second annual meeting of the society on May 25, 1920, stating that "although friendly societies have been administering the national health insurance act for nearly eight years, it cannot be said that the health of the people has been improved even in the slightest degree by the provisions of the act."

[From "Why I Believe in Immortality," by Douglas Clyde Macintosh, in The Biblical World]

It is vain to imagine that the "values" of individual personality will be conserved, if the individual himself is to disappear and exist no longer. If individual consciousness goes, all value is lost. . . . If the death of the body means the annihilation of the consciousness, no values are conserved ultimately. All will be lost, for a time is coming according to science when our earth will no longer support physical life. . . . But if moral optimism is valid, it must be because there is an absolutely dependable Factor in the universe, a Power we can rely upon to guarantee that no absolute disaster can befall the will that is steadfastly devoted to what is truly good. In other words, there must be a Power great enough and favorable enough to man to justify this absolute trust on the part of man. Obviously any such Power would be God. Obviously, too, it is a part

**

of the function of God, so defined, to guarantee immortality. For if man is not immortal, physical death can bring the absolute evil of annihilation to the good will, moral optimism is not true, and God, as the absolutely trustworthy Power above our power, the adequate Object of religious dependence, cannot with consistency be supposed to exist. On the basis of moral optimism we can affirm God, freedom, and immortality. . . .

That consciousness necessarily depends upon the brain is not the teaching of science; it is simply the unproved dogma of some scientists.

[From The Pioneer]

In the new republic of Czecho-Slovakia although there is no law compelling temperance teaching in the schools there is, according to a member of the faculty of the University of Prague, great enthusiasm and conviction in the hearts of the teachers and professors who point out all over the country the evils of alcoholism. As one evidence of this activity on the part of the teachers, he cited a resolution unanimously passed at the last annual convention of all the teachers of the republic, five thousand strong, calling on all members of the profession to give up liquor absolutely. He is further quoted as saying: "In my own country the Republic of Czecho-Slovakia anti-alcohol education has been zealously given by teachers for a long time in Bohemia, Moravia, and Silesia, with splendid gains for total abstinence. The foremost temperance leader has long been the statesman, now President, Thomas Masaryk.

"University professors are sending out annually many young leaders for abstinence who in turn teach total abstinence in the normal and secondary schools. One very effective method has been introduction of temperance material into the reading books. This will be gradually extended to all these books. As a result of the teaching, students are building up a rapidly growing abstinence association; . . . drunkenness is little known in Bohemia, Moravia, and Silesia; in Slovakia where whisky has been prevalent the new government has stopped its sale and strong instruction has been organized in four thousand elementary, thirty-five high schools, and a university. With these forces at work, in the not distant future alcoholism will be a thing of the past."

[Edward Shillito, M.A., in "Essays on Vocation"]

Where does the sense of a vocation enter? Faced by the necessity to choose, a man decides, with the best judgment which he can command, that he must follow this or that way of life. . . . Such a work, entered upon by such a man, is a calling when it is clear to him that his own word is an answer to a previous word—when, therefore, the man enters upon his life-task with the confidence of one who is set in that place by Another. It may look to him on the surface as though he had made the decision himself, but he knows, no less, that the very word, which seemed to spring from his own mind and will, was itself prompted by a prior demand upon him. The word may be, "I must be this or that," but in the heart of it at the same time it means, "Here am I; send me."

It is this assurance that our choice is an answer that makes the sense of vocation. It is of minor importance how the call comes—how far it may be direct or indirect, plainly revealed or disguised. But it makes all the difference in the work that is done by a man whether or not he believes that he has been put there and cannot leave. He did not begin the work and he is not at liberty to forsake it. The historic calls, heard by the great servants of God, may help men to

listen for the voice, which no man who hears can mistake. But they may do harm if they set men thinking that the same methods must still be followed, and if they are wanting, that the call is no longer sounded. The walls of the temple do not part for such a one as they did for Isaiah, when he saw the Lord and heard the voice which constrained him through his long years of prophesying; he sees no light in the noonday sky, such as fell upon Saul of Tarsus. . . .

All that he may be ready to admit is the possibility that some all-embracing Power may take his work and weave it into the pattern of things. It is a Power which comes after. He cannot believe that this Power came first, and that he himself was yielding all the time to a pressure which came from Another Hand. And he does not believe this to be possible, because he has grown accustomed to limit the One who calls to a certain range; if He is to call, He can only do it in some supernatural and dramatic way; only so can man be sure that he is not self-impelled. Perhaps it was the only way in which men at one time could be convinced; it is not the only way now. There is a fatal error in the attempt to standardize the divine methods. It would limit the number of the called to a few rare spirits who have had the startling visions and heard the heavenly voices. Would it not be a serious charge against the divine Lord if the average man were shut out by his very make-up from the strength and confidence which come to the man who is called, if he were left to be but a blind agent of an unknown Power? The meaning of vocation needs to be considered afresh if we are to be freed from the paralyzing fear that only few can have the joy and peace of the friends of God, with their place secure in His purpose. . . .

Whatever the pure language of heaven may be, it must be translated into the nearest equivalent within our vocabulary before we can take it into our own field of thought and will. Such translations must vary. It is probable that if the same message came through to us that came to Isaiah in the year in which Uzziah died, it would be in an entirely different set of images. To demand, therefore, that a call from God should be of a standard pattern may be to rob Him of His power to translate His word into our speech. Is it wiser and even more scientific for the listening ear to say beforehand how the voice must speak? The great Translator must be left to translate His word in His own way. . . . The Hebrew would have said, "The Lord hath spoken to me;" we say, "We read a certain word in a book," or "We heard a preacher," or "We received a counsel from a friend." We are right; but was the Hebrew wrong? Is it not possible that the call of God may be heard in these very voices which we so clearly identify as merely human? We do not know whence these voices came in the last resort. "What if that friend be God?"

This is but to enforce the necessity for the open mind, if we are to listen for a call. It is a plea that we should not limit the range of the divine Spirit. . . . The listener must be ready to obey when the call is heard. There must be no attempt to limit the obedience, as though he said, "This way of life or that is barred; the rest He may choose."

4

[From "The Pilgrims' Contribution" in The Hibbert Journal]

Bradford's precious *History* is filled with incidents and allusions which prove and illustrate the primarily religious character of the little settlement. As its members were in trouble and in danger, seeking their way to the shelter of an unknown harbor, they found a gift of God in "a morning of comforte & refreshing (as usually he doth to his children)."

[From Public Opinion, London, England]

o call, Br The earnestness with which physical scientists are con-#31: (E-: tinually testing and retesting their fundamental assumptions Perkin In is worthy of all praise. Christian teachers, dealing as they dbess do with issues of even greater moment, should emulate their lenn 22. example. Too commonly we are only dilettanti in our chosen field. We must come to grips with bottom facts. . . . It is evident that the church to-day is most in need not of administrators, and not of pastors, and not of preachers, but of teachers. Of course I do not mean mere occupants of professorial chairs, but those who, whatever their official position, whether in pulpit or pastorate or college or seminary, are equipped to discover and interpret the truth.

[Introduction to a Christian Science Lecture in Des Moines, Iowa]

i Got Fil We are met to-night to listen to a discussion of the most ·important subject that has been presented to this age, "Man's Relation to God." Jesus' words are, "If ye continue in my word, then are ye my disciples indeed; and ye shall know wa ich the truth, and the truth shall make you free." To the finite, mortal mind, God often seems to move "in a mysterious way, His wonders to perform." Just why this means or that means is used to bring men into a knowledge of the truth, into harmonious accord and relationship with God, it is not for mortals to know. This will be revealed when the truth has made us free from the bondage of sin and death. There has come to this age through Mary Baker Eddy, the revelation of truth that will, if we accept the teachings, bring to us this freedom; but as was the case with men nearly two thousand years ago, some have accepted it, some have rejected it, some are indifferent to it.

3 The jewel of greatest price that has been found in this age is the truth that illumines the pages of "Science and Health with Key to the Scriptures" by Mary Baker Eddy. This truth is a right understanding of man's relation to God. This jewel is as available to you as it is to me. It is available to all mankind. If I should tell you to-night that I know the location of a jewel of rare value and that the jewel is close at hand and is easily accessible and is yours if you will but go and get it, would you hesitate? No; you would not. You would at least go to the place where the jewel was said to be, and if you found it there you would make it your own, and you would tell your friends of your good fortune. This jewel of great price, the truth taught by Christian Science, has illumined many a home in this and other lands, and driven from them the clouds of gloom. The beneficiaries of the truths of Christian Science bear testimony throughout the world to the healing value of its teachings. This healing truth, this jewel of greatest price, is for all; to become possessed of it, all that is needed is to reach out for it and make it one's own. I am glad to be

able to testify that I accepted some years ago the evidence presented to me of the healing efficacy of the truth taught in "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and that from that day to this I have been a beneficiary to the extent that I have applied these teachings in my daily life.

[Lord Leverhulme as Quoted in Builders, Published by Lockwood, Greene & Co., Boston, Massachusetts]

To the extent that workingmen joining a board of directors can improve the efficiency of the business and make for cheaper production—to that extent they are sure of a welcome on the board of any company, and the firm who had a board so composed, of earnest, sincere men, will have gone a long way to achieving, by means of better service to the public, a greater success for their industry. But if workingmen were introduced to a board of directors merely because idealists considered they should be there regardless of whether they were qualified by their experience for a seat on the board, and regardless of whether they approached the question of production from the point of view of better service to the public or not-then the position becomes untenable. . . .

More and more each succeeding year business will require efficiency, from the youngest office boy to the chairman of the company, and all these academic discussions as to new relationships between capital and labor can only result in disappointment unless we start first, last, and all the time from the point of view of better service to the public. Any ideal that can achieve better service to the public will grow and increase on its own vitality, as does the acorn until it becomes a mighty oak.

[From The Universalist Leader]

A business man of international reputation who has recently spent much time in Europe, and who formerly declared the church to be obsolete or at least negligible, now says that the moral collapse following the war cannot be overcome by any economic readjustments, but only by a revival of religion. 4 4 4

Church Notices

Boston, Mass.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

CHURCH TENETS .- The tenets of The First Church of Christ, Scientist,-The Mother Church,-printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, M1ss.

Announcements

+ + +

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size $8\frac{1}{4}$ " x $10\frac{3}{4}$ ". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massa-

chusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to Intervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

New Morocco Bound Vest Pocket Edition of Textbook

Announcement is made of the publication of a new, morocco bound, vest pocket edition of "Science and Health with Key to the Scriptures," by Mary Baker Eddy.

This small volume, 3 1-16 by 4 5-16 inches, the same in size as issued for soldiers and sailors during the war, is bound in black morocco, limp, leather lined cover, round corners, gilt edges. Price \$3.50 for single copy and when included in lots of twelve or more copies of Science and Health in any or all bindings, \$3.25 each.

Orders for this edition will be filled in rotation.

Vest Pocket Bible

The Bible, bound in morocco, uniform in style with the vest pocket edition of Science and Health, is now on sale at \$4.75 a copy. Order by number 08X. Reading room discount 10 per cent.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlet in Russian

On February 26, there will be placed on sale a new Russian translation of "Christian Science: Its Advantage to Mankind" by Edward A. Kimball, with alternate pages in English. Price 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind

In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S. A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U. S. A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Scatinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Letters of Appreciation

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading.

A Naval Officer of high authority in a recent public address made as reported the following statements:

THE American public is largely uninformed of our naval development or of the large navies of the world. There are but few expert writers of naval subjects. The newspapers, even those of our large cities, have not been able to go into any comprehensive detail on this important question. There are unfortunately too few intimately schooled in naval doctrine of war to present the real, interesting, and necessary facts.

THE CHRISTIAN SCIENCE MONITOR is one of the few newspapers of the country whose articles pertaining to naval affairs show expert treatment. Articles on various phases of naval development and sea power appear at frequent intervals in this paper and are authoritative and of expert extraction. The articles are accurate and I read them with interest. Expert knowledge should be developed, and our navy become more than a generality to the public.

The following letter was published in the Editor & Publisher of Jan. 29, 1921

I AM mailing the following letter to Greenville Talbott, Augusta, Ga.:

"After reading your excellent article 'What Papers Have Best Editorial Pages?' in Editor & Publisher, Jan. 8, 1921, issue, I asked myself what paper has the best editorial page and I replied, 'The Christian Science Monitor.' I might add I am familiar with most of the papers named in your article."

paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German.
Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 00 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers. gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

single copy 50 cents; six or more, each 35 cents.

Printed in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six

or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong rejutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston, Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

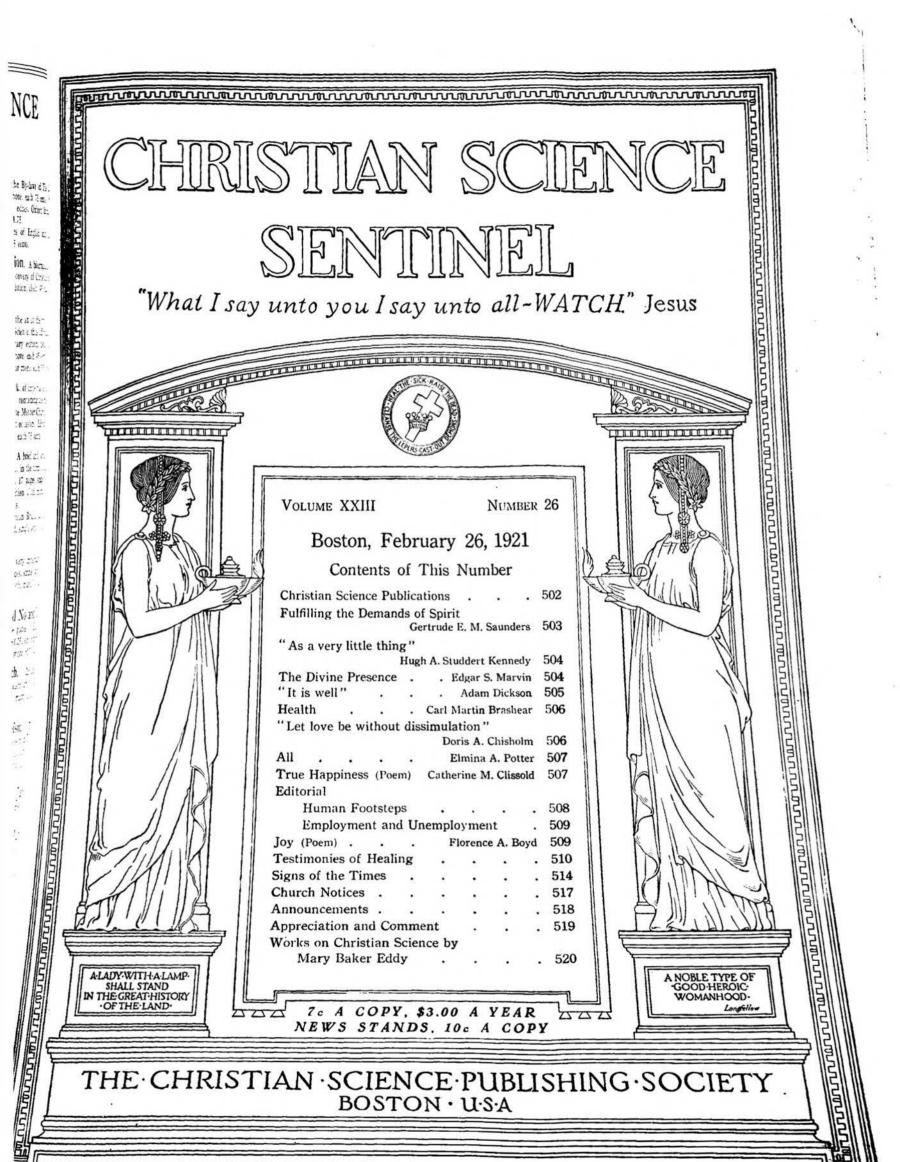

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, BOSTON 17, U.S.A. Sole Publishers of All Authorized Christian Science Literature

NUMBER 26

Fulfilling the Demands of Spirit

GERTRUDE E. M. SAUNDERS

HRISTIAN SCIENCE comes to the human conscious-Uness at all times and in all circumstances. Nothing can hinder it or stay it. It pierces the walls of the prison house, it searches out the sorrowful and despairing, it enters the house of sickness, it is found in the turmoil of the workshop and in the busy city office, in the log cabin high up on the mountain side, and in the homestead amid the great stretches of prairie land. It "is no respecter of persons;" it presents to all alike its method, by which each may, at the very moment Truth is perceived, start on that best of all possible tasks, namely, that of working out one's own salvation. It is this very task, however, which one sometimes finds a little irksome and disagreeable. Having caught a glimpse of the real creation, he is apt not only to be impatient with but to wish to disregard many of the footsteps leading to that freedom from all materiality to which divine Science points and leads the way; which is, indeed, both way and goal in itself, for the moment the path of Principle is entered upon, that moment the oneness of Principle and idea is, in some degree, demonstrated.

There is nothing in the Scriptures or in the writings of Mrs. Eddy to encourage any hope that perfection can be reached by any slurring over or neglect of any duties. In reality there are no such things as merely human duties, because actually man is constantly fulfilling the demands of Spirit; and it is in proportion as this is realized that human duties, which necessarily call for the laying down of the belief in a self, give place to self-government, for, as Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 125), "Reflecting God's government, man is self-governed." And this is surely something of what Jesus meant by his parable of the talents. The servants who neglected no opportunity to use the knowledge which was theirs doubled the portions left to their care, and received the "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord." In other words, they had been about their business and had used their knowledge of Principle in all their dealings with their fellow men, with the result that they were no longer servants to the human senses but would henceforth share with their master the joy of authority over all that was unlike God, good.

On page 254 of Science and Health Mrs. Eddy writes: "During the sensual ages, absolute Christian Science may not be achieved prior to the change called death, for we have not the power to demonstrate what we do not understand. But the human self must be evangelized. This task God demands us to accept lovingly to-day, and to abandon so fast as practical the material, and to work out the spiritual which determines the outward and actual." It must be remembered that Christ Jesus ascended after his life's mission was fulfilled. When his followers have overcome sin at all

points, then will man be found in the image and likeness of God, but one will never realize perfection whilst trying to reach it through imperfection at any one point.

Perhaps one of the chief difficulties before the beginner is that he fails to realize the significance of the particular work which the Christ, Truth, found him engaged upon. He naturally desires to gain increasing knowledge of the Science of Christianity in order that he may demonstrate to those around him man's oneness with Principle, and he would like above all things to devote his life to what he calls "Christian Science work." This, however, he feels is only very remotely possible, for has he not to spend so many hours of the day earning his living, and, as he believes, dividing his time between spiritual things and material nothings? It is here, of course, that the mistake lies. While he believes his time is divided in this way his ability to become a practitioner, in the sense in which this term is understood in Christian

Science, must forever remain problematical.

After all, what does work in Christian Science mean? It means that every adherent must sooner or later recognize that the practice of Principle is the whole of true living. Mrs. Eddy says, on page 450 of Science and Health: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good. Sickness to him is no less a temptation than is sin, and he heals them both by understanding God's power over them. The Christian Scientist knows that they are errors of belief, which Truth can and will destroy." Just in the proportion that the student understands that it is never a person but always an erroneous mental concept which Truth heals, will he be able to perceive that it is always the false belief presenting itself to his attention that has to be replaced with the true idea. Man is the reflection of God, who is "of purer eyes than to behold evil," and this being the great fundamental and eternal fact upon which divine Science rests, it is the student's business to act in accord with Principle in every detail of his work. There is no other way to serve the cause of Christian Science. It does not in the least matter what the nature of the individual's work is, so long as it is legitimate; what is of primary importance is the way in which the work is approached and executed. All human activity is the counterfeit of the activity of The student who yields to the temptation to believe Mind. that his work is confined to the material, moves in the counterfeit and is like the slothful servant with the one talent: he hides his knowledge of Principle for so many hours a day, thinking he cannot possibly apply it with profit to the conditions he thinks exist; but he who works in Principle, giving the highest service in what may appear to be the meanest tasks, is expressing the activity of Mind, which is the only activity there really is.

It is clear, then, that the only possible way to work out one's own salvation is by the faithful application in all one does of one's knowledge of Principle, which effort alone will prove that all action does indeed proceed from Mind, "whose works are truth, and his ways judgment."

"As a very little thing"

HUGH A. STUDDERT KENNEDY

ONE of the strongest convictions of the human mind is its belief in the grading of difficulties. This problem is accounted easy of solution, that one more difficult, whilst yet another is set down as necessarily insoluble. Faced with any particular question, the human mind braces itself suitably for the task. It calls to its aid what it considers the requisite amount of assistance and, in proportion to the accepted gravity of the case, its fears are increased.

Now Christian Science teaches that there are really no degrees of difficulty in any problem which the student of Christian Science is called upon to solve. As Mrs. Eddy makes so clear on page 418 of "Science and Health with Key to the Scriptures," one erroneous condition is no more difficult to heal than another. "It must be clear to you," she says there, "that sickness is no more the reality of being than is sin. This mortal dream of sickness, sin, and death should cease through Christian Science. Then one disease would be as readily destroyed as another."

Nevertheless, the conviction that this is not so, the temptation to acquiesce in the world's estimate of certain difficulties, is one which every Christian Scientist finds himself beset with very frequently. Confronted with a claim of disease in himself or another, of discord in his own estate or that of another, or with any kind of problem, almost unconsciously he finds himself estimating the difficulty, whereas the truth is that there is no difficulty. Reality, Principle, God, is not in the fire, nor in the wind, nor yet in the earthquake. No doubt if a modern meteorologist had been by he could have explained to Jesus, in the storm-tossed boat on the Sea of Galilee, the impossibility of stilling the tempest. He could have shown how the wind that was sweeping down on them across the valley of the Jordan depended on climatic conditions spreading themselves over continents, and taking weeks for their formation. Jesus would none the less have stilled the tempest, and there would have been a great calm. Why? Because it is impossible to conceive of the man who could walk on the water, heal multitudes, and raise the dead, considering for one moment the question of material obstacles.

This insistent, imperative claim to all-power, this complete disregard of all apparent difficulty is evident at every turn in Jesus' ministry. But nowhere, perhaps, is it more strikingly shown than in the series of incidents recorded in the fourteenth chapter of Matthew. Jesus had heard of the beheading of John the Baptist in prison. The tide was evidently rising against him, demanding a stronger assertion than ever of power. He withdrew into a desert place. But the people followed him on foot, hundreds and thousands of them, men, women, and children. He had compassion on them, taught them, and healed their sick. It must have been a day of marvelous overcoming. Then toward evening came the first suggestion of limitation and difficulty. They were in a desert place. The people were hungry. It would be better, declared his disciples, to send them away so that they might go into the villages round about and buy food. Quick as thought came Jesus' reply, "They need not depart; give ye them to eat." The apparent difficulties were stupendous, but they were all swept aside and the multitude was fed. Then desiring to be alone he constrained his disciples to take ship to the other side of the lake whilst he sent the people away.

The solitude thus gained, however, was only a prelude to further work and victory. All day long Jesus had been shattering material laws. More were destined to go before

dawn. He was separated from his disciples. Well, what was space? The sea lay between them. Well, what was the sea? There was a storm raging. Well, what was the storm? So he came to his disciples, walking on the water, and so greatly had the hold of material law been shaken in human consciousness that even Peter was able to leave the ship and come to meet him. It was only when Peter began to estimate the difficulties that he began to sink. "O thou of little faith, wherefore didst thou doubt?"

It was this understanding, of course, which lay behind Jesus' promise to his disciples that if they had faith as a grain of mustard seed they should move mountains and nothing should be impossible to them. "Meet every adverse circumstance as its master," writes Mrs. Eddy on page 419 of Science and Health. In other words, surely, realize that there are no adverse circumstances. The Bible is full of this teaching, from Genesis to Revelation. "Behold, the nations are as a drop of a bucket, and are counted as the small dust of the balance: behold, he taketh up the isles as a very little thing." So, in Eastern imagery, does Isaiah set forth the same lesson as Jesus when he stilled the tempest, or as Mrs. Eddy when she insists that one disease is no more difficult to cure than another. This is not an ocean of trouble, it is as a drop of a bucket; this is not a mountain of difficulty, it is as the small dust of the balance. In the understanding of Truth, no matter how error may vaunt itself, we may take it up as a very little thing, as, in fact, what it is-nothing.

Such, it cannot be doubted, is the way of approach to every problem. Mrs. Eddy says on page 411 of Science and Health, "Always begin your treatment by allaying the fear of patients." The source of all fear is, of course, this belief in evil and the power of evil, and any belief in degrees of difficulty is a belief in evil. A lie is always a lie, whether it be the smallest passing discord or a storm at sea. The way of escape, or rather the way to realize ever present victory, is to deny its verity. But it is impossible to do this whilst believing that there is "a great deal to be done," that "something" has to be destroyed. It is always safe, because it is always true, to deny the seeming bigness of a problem and to affirm its littleness, its nothingness. It is always safe, because it is always right, to be "very courageous," and entirely undismayed. For, as Mrs. Eddy puts it in "Miscellaneous Writings" (p. 183), "Man is God's image and likeness; whatever is possible to God, is possible to man as God's reflection."

The Divine Presence

EDGAR S. MARVIN

PERHAPS in nothing has human thought been more subject to erroneous belief than in its concept of the truth concerning the immanence of God. All Christians, of whatever denomination, profess to believe that God is infinite. An examination, however, into their application of this belief to everyday living, proves it to be an admission in theory only, and quite rejected by them in practice. If God is infinite, there can be no place where He is not; there can be no place nor particle outside His presence. Then all reality, all that lives, or moves, or is, dwells in Him and can have no possible existence outside of His being and presence. Christ Jesus said, "God is Spirit" [Revised Version]; and Paul says in Acts, "In him we live, and move, and have our being." Then all live in Spirit, God, and there is no life outside of Him.

Our actual beliefs control our actions; our professed beliefs may or may not do so, depending upon their agreement, or otherwise, with our real convictions. Would any Christian, really believing in the infinity of God as above stated,

isciple Fig. knowing Him to be only good, without "shadow of turning," as well as omnipotent, having all power, ever be found entertaining a belief in evil within such infinity, to the extent of attempting to practice it? Surely not. Why then do Christians thus accept the truth of God's infinity in theory but reject it in practice? It is a common thing for many to pray God to bless various good enterprises, as though God were not infinite in goodness. One also hears the teaching that He is especially present in a house dedicated to His worship; as though there could be abundance of infinity in one place and a lack in others. It is true that the psalmist, marveling at the prosperity of the wicked, said, "When I thought to know this, it was too painful for me; until I went into the sanctuary of God; then understood I their end;" but here the change was doubtless in the worshiper, wrought not through any mere change of location but by his turning away from material things, so distracting to the physical senses, and by coming into conscious harmony with Spirit, divine intelligence. Does not Jacob at Bethel express this thought when he says, "Surely the Lord is in this place; and I knew it not"? He did not have to bring God down from a throne in the sky, for the divine Mind is ever present. Jacob needed only to know the presence of divine consciousness.

We read in the one hundred and thirty-ninth psalm: "O Lord, thou hast searched me, and known me. Thou knowest my downsitting and mine uprising. . . . Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." Believing the Scriptures, why are Christians seemingly unable to accept their teachings in practice?

In the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, we find the answer to this vexatious problem; indeed, to the honest seeker this book will ever prove the key to unlock every Scriptural truth. On page 465 we read: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." By giving careful thought to this definition of God, we see that a belief of the infinity of God as a corporeal, manlike person is an utter impossibility, hence it must be abandoned before we can understandingly and truthfully believe in the omnipresence, or all-presence of God; but every one of the above synonyms given by Mrs. Eddy to express God, is purely spiritual, is infinite in scope. Even a finite so-called mind can think of no place where Mind, or Spirit, or Soul, or Principle, or Life, or Truth, or Love, is not, in all the universe of God.

"It is well" ADAM DICKSON

WHAT a cause for rejoicing students of Christian Science have to-day for being able to say amid all the seeming strife and turmoil throughout the world, "It is well." On page 223 of "Science and Health with Key to the Scriptures" Mrs. Eddy says: "Marvels, calamities, and sin will much more abound as truth urges upon mortals its resisted claims; but the awful daring of sin destroys sin, and foreshadows the triumph of truth. God will overturn, until 'He come whose right it is.""

The healing truth is to-day replacing the false beliefs of life, truth, intelligence, and substance in matter, with the result that error is being forced from its hiding places. Finding itself thus disturbed it may manifest itself in turbulent

rapids of strikes, uprisings, and general upheavals, or gather itself into stagnant pools of indolence and discontent, or any other of the forms whereby it deceives the whole world by declaring that a solution of its problems can be gained in that way. Sooner or later Spirit proves that where discord seemed to be, harmony is found, and the strife is stilled. Where error had filled human thought, divine Love's purity is manifest, and the overflowing waters of truth now refresh the earth with peace, prosperity, and happiness.

Students of Christian Science alone know what the upheaval means. It is, as Mrs. Eddy-says in the passage before quoted, truth urging upon mortals its resisted claims, and sin destroying itself. It is necessary, therefore, that we keep awake and do not become mesmerized by all the seeming turmoil going on to-day. We must give no power to it whatever, no more than does the practitioner to any disease he may be called upon to heal. This does not mean we are to shut our eyes and say, "There is no turmoil," but it means that we see the nothingness of its seeming power by looking to what spiritual sense knows is there. Material sense would have us believe that there is strife, turmoil, disturbances, and discontent; that there is sickness, disease, and death, and that God is the author of these. Spiritual sense, or Christian Science, destroys these false views, proves that man is quite apart from matter, demonstrates his safety, and brings to light his oneness with God, wherein he can truly say, "It is well."

The story of the Shunammite woman, in the fourth chapter of II Kings, is a wonderful example to all students of Christian Science. Not even when her son lay dead did she give way to despair or discouragement, but in the face of all material evidence she declared, "It is well." She would not listen to the suggestion to put off seeking the man of God because it was "neither new moon, nor sabbath." She went and found him, and having found him would not leave him, and eventually had her son restored unto her. What is the idea that is seemingly lost to us? Is it health, or happiness, or any one of the God-given rights that are truly ours? Is hope dead within us? Are we discouraged or in despair? Have we let material sense overwhelm us? If so, let us turn away from the false evidence, voice the words of this woman, "It is well," with the understanding of Christian Science. If the suggestion comes, "Christian Science cannot help you in this instance," it is the same lie that said, "It is neither new moon, nor sabbath." Silence it with the words, "It is well," search for the man of God, that is, a greater knowledge of Truth, and having found it cling fast unto it until the true sense of experience is restored to you again, brighter and better than before.

"To those leaning on the sustaining infinite, to-day is big with blessings," we read in the Preface to Science and Health (p. vii). Students of Christian Science everywhere are today rejoicing in these blessings and will not be overcome by any of error's upheavals. Where the greatest upheaval seems to be, the truth is there actively at work, and error is being destroyed; that is inevitable because it cannot destroy one iota of truth. Those who know God and trust in Him, through their knowledge of what Christian Science has taught them. have no cause to fear. The following verse from one of Mrs. Eddy's hymns, "Mother's Evening Prayer" (Poems, p. 4), surely sounds the keynote whereby Christian Scientists are enabled to say, "It is well":-

> Love is our refuge; only with mine eye Can I behold the snare, the pit, the fall: His habitation high is here, and nigh, His arm encircles me, and mine, and all.

Health

CARL MARTIN BRASHEAR

In a primary grade at school the children were asked, "What is the difference between health and sickness?" One little boy gave this reply: "Health is when you are feeling good, and sickness is when you are feeling bad." This simple statement of what constitutes health and its so-called opposite is a gem of truth that only the fortunate ones who have had the advantage of an acquaintance with Christian Science teachings can really appreciate and comprehend. On page 120 of "Science and Health with Key to the Scriptures" our beloved Leader, Mrs. Eddy, has stated, "Health is not a condition of matter, but of Mind; nor can the material senses bear reliable testimony on the subject of health." Health is, then, a condition of consciousness. God being the one Mind, health is one of His attributes, and good health is the only health there possibly can be. "What seem to be disease, vice, and mortality," Mrs. Eddy tells us on page 11 of "Rudimental Divine Science," "are illusions of the physical senses. These illusions are not real, but unreal. Health is the consciousness of the unreality of pain and disease; or, rather, the absolute consciousness of harmony and of nothing else."

Living is an expression of Life, and Life is God, and unless God fails us health is ever with us, and we can rest in the assurance of Paul, when he said, "For I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God." There can be no more truth in a statement of ill health or poor health than there is in a statement that two times two equal five. Nothing but ignorance would make such a statement. You could get no ill nor sorrow from a statement that two times two equal four, because it is the everlasting truth, and in truth there is no ill. In health there is no disease; ignorance of Life-of true beingis the soil from which spring our fears called disease. Mrs. Eddy, writing on page 62 of Science and Health, elucidates this when she says, "Our false views of life hide eternal harmony, and produce the ills of which we complain."

Before we knew anything of the teachings of Christian Science, we perhaps viewed existence—our being—as beginning in and supported by the material body. We readily admitted that should anything happen to disorganize or destroy this material body, our life would then have no habitation or foundation. From this condition of thought we very logically deduced that the condition of the material body had everything to do with the care and keeping of our health. We believed, therefore, that life, health, living, depended on and were regulated by the body. It was the false view of what constitutes life and therefore life's condition, health, that was bound into ever narrowing circles. The record of the true history of creation ends with these words: "And God saw every thing that he had made, and, behold, it was very good." Paul's admonition to put off "the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind" and to "put on the new man, which after God is created in righteousness and true holiness" is our joyful duty to-day, if we are to change our concepts of what constitutes life, health, and salvation.

If we are to follow the Master we must see man and creation as he saw them, as the true idea. Jesus saw God's man and the universe as created not by material sense, but as the verse already quoted from Genesis describes them. When we, through spiritual sense, can see God's man and the universe, we shall love them, for like their Maker, divine Love,

they are lovable, and we shall feel the presence of good about and with us all the time. Thus feeling good all the time we shall not feel bad, and the little boy's definition of health will become a reality to us. Because God's creation, including man, is lovable, good, whole, and perfect, we must see it so, by looking above and beyond the demoralizing material presentation projected on the screen of material sense. Through this uplifting of thought to the realization of God's ever presence, we shall reflect the love, joy, peace, and goodness that such realization brings. Our concepts of what constitutes life and living having been changed, then eternal harmony is hid only from our earth-tired sight, while it opens wide to spiritual vision; thus we are made whole—Godlike, healthful, full of health, or wholeness, again.

"Let love be without dissimulation"

DORIS A. CHISHOLM

THROUGH the study of the Bible we learn, among other things, that God is Love. Notwithstanding the fact that He is accredited by many persons with sending floods, fires. wars, earthquakes, disease, or pestilence, we know, from the light which Christian Science throws upon the Scriptures, that God is unchanging, ever present Love, who is "of purer eyes than to behold evil." There is great joy, peace, and harmony in knowing just the one infinite Mind, which constantly sustains man. In this understanding there can be no sin, sorrow, disease, or death.

Paul gives the true analysis of love in his letter to the people of Corinth, as found in the thirteenth chapter of I Corinthians. Summing up, he says, "But now abideth faith, hope, love, these three; and the greatest of these is love" (Revised Version). Henry Drummond says in his book, "The Greatest Thing in the World": "You will give yourselves to many things, give yourself first to Love. Hold things in their proportion. Hold things in their proportion. Let at least the first great object of our lives be to achieve the character defended in these words [faith, hope, love] the character—and it is the character of Christ—which is built round Love."

Thought must be kept so high above the sordid, unreal things, which God knows not, and which man, as His reflection, cannot know, that there can be nothing but good manifested for all. We are continually confronted with the testimony of the material senses, but that testimony is not the truth of being, and never was, and never will be. Man does live and move as the divine action, and there is nothing which can impede true progress. Trials and temptations, which endeavor to assert themselves, only serve to teach us not to lean on any material sense of things, but to trust, with calm assurance, and know that "with God all things are possible."

Each one of us has to meet and destroy the false claim which presents itself in expecting perfection from those with whom we associate, forgetting that with God, alone, is perfection found. We read, in Mark's gospel, of the man who had great possessions and who came to Jesus seeking eternal life and addressed him as "good Master." Jesus immediately rebuked this erroneous thought which saw good in the human and did not recognize the Christ. "Why callest thou me good?" he asked; "there is none good but one, that is, God." If we always bear this in thought, the way will be much easier and brighter, as we cannot possibly expect any one to demonstrate what is not understood, for truly demonstration is always in line with understanding. We must, therefore, cease looking to person in place of Principle for that

around him.

because good is all, there is no evil, and so on. The knowl-

edge and statement of the absolute truth must necessarily

include the understanding that its suppositional opposite is

not. The philosophy of the serpent of "good and evil"

starts with the false premise that there is something outside

the allness of good. How far has our education along ma-

terial lines taken us when the most learned have not yet

begun to realize what such a simple statement means? In

contrast, the child can more easily grasp the wonderful

truth that good is all and expect to find only good in the

wonderful adventure of exploring the unknown world

plied always brings healing, and this result is manifested just in proportion to one's understanding of the truth. Take the

simple statement that right now man is living in infinity

and has all the time there is; this truth applied would heal

the disease called hurry, that disease which says, "I have

no time for this or that;" and is too much in haste to under-

stand the present opportunity. All right activity, however,

lives in infinity; when this fact is established the thought of

the patient is changed; he says: "I cannot express any in-

action or overaction"-which is the truth governing the sit-

uation. In Science and Health (p. 283) is this statement:

"Mind is the source of all movement, and there is no inertia

about my Father's business?" Is it not evident that he knew but one business, and that as God's? Consider also

the many examples he gives us of supply; is it not plain that

it was because of his knowledge that supply is infinite, is

here and now, that he multiplied the loaves and fishes even

to the doubting ones? In other words, all our needs are

supplied when the understanding is present of the spiritual

fact, "Your Father knoweth what things ye have need of,

before ye ask him." It is easily discernible that the last

enemy will be overcome when the fact of Life as All is uni-

versally understood. Did not Jesus overcome death by

knowing and proving this fact? So shall we be ready to

overcome "the last enemy" if we meet all the other so-called

enemies fairly and squarely with the understanding that

senting itself under various disguises, is fear, but the simple

truth applied that God fills all space, and the knowledge that

there is no place where God is not, gives one the confidence

that destroys fear. Each person may easily begin, the one

just commencing the study of Christian Science, and the

one who has been studying for years, and know that every

time he uses the word "all" and understands it, he is nearer

the full realization that God is All, and thereby is recog-

[Written for the Sentinel]

True Happiness

CATHERINE M. CLISSOLD

IVI Thy law to love, Thy dictates to obey,

To see all men Thy sons, Thy children dear,

Safe in the perfect Love that casts out fear.

Y Father-Mother, help me day by day

nizing the fact that "the kingdom of heaven is at hand."

One of the most common enemies to all mankind, pre-

Consider Jesus' words: "Wist ye not that I must be

to retard or check its perpetual and harmonious action."

In Christian Science we learn that the truth rightly ap-

"peace of God, which passeth all understanding." We must

become as little children, looking only for what can reason-

ably be manifested from a Father who is Love, and there-

Life is eternal; therefore there is no death. All that ever

dies is false belief, which never had any real existence. One

should not be dismayed at the destruction of error, as its

destruction is but the natural logic of events. Error is noth-

ing, hence nothing from nothing leaves nothing. On page

261 of "Science and Health with Key to the Scriptures"

Mrs. Eddy gives us this admonition: "Hold thought stead-

fastly to the enduring, the good, and the true, and you will

bring these into your experience proportionably to their oc-

cupancy of your thoughts." If we do this, there can be no

retrograding. It may appear, during the false belief of

strife and division, that growth is at a standstill, but that

is untrue, for we are all under God's law of progress, and there can positively be no stagnation. Growth is inevitable.

There is but one cause and effect and that is in the mental

realm, where all is harmony. Mrs. Eddy has truly said, in

Science and Health (p. 572), "Love fulfils the law of Chris-

tian Science, and nothing short of this divine Principle,

understood and demonstrated, can ever furnish the vision

of the Apocalypse, open the seven seals of error with Truth,

or uncover the myriad illusions of sin, sickness, and death."

HE truth in the following quotation from the Christian

All

ELMINA A. POTTER

His children cannot fear.

Knowing that God is here!

you knew, not merely believed, that all means all to you, if

you should realize its full significance every time you use

How many times is this wonderful and true statement

I Science Hymnal (No. 156) is very simple:—

If God is all in all,

See baseless evil fall,

fore can only know what is good and true.

that word. Think what it would mean to know that good is all there is; then it would of course follow that one could not be conscious of evil in any form or under any disguise.

made, that God is all the power there is, all the presence there is, all Life, all Truth, and Love, All-in-all; but is it fully realized? Knowing that all health is truly present, where could one find sickness or be conscious of it at any

time in himself or others? Think how wonderful it would be if the thought of the whole world were changed to realize only health. Being conscious that Love is All, could one find any evidence of hatred or its seeming effects? In the pres-

ence of the allness of Life, could death ever be known or

felt? One catches a wonderful glimpse of infinity by just

realizing that all means all. Carefully study these Biblical statements from Genesis:

its existence as the creation of God? Take for instance

"And God saw every thing that he had made, and, behold, it was very good," and see how definitely the nature of all is defined. In "Science and Health with Key to the Scrip-

"In the beginning God created the heaven and the earth,"

tures" (p. 311) Mrs. Eddy has made a correlated state-

ment and still further defined the nature of "all" in the following words: "God is Mind: all that Mind, God, is, or bath made, is good, and He made all." Could any logician

start with the premise found in these statements and reason rightly and find any source for evil or any way to justify

the premise that because Mind is All, there is no matter;

[507]

God, good, is All-in-all.

Then shall Thy peace infold me, heart and life, Thy balm surround me, silencing all strife,

Thy joy my strength, all ills to overcome, Thy truth the light to guide me safely home.

Human Footsteps

It is the habit of the human mind to search diligently for excuses. If there is one thing from which it shrinks it is being compelled to admit its faults, or to reveal its weaknesses. So strong indeed is its revulsion from this that it will, on occasion, tear down the veil in a sort of ecstasy of bravado. Ordinarily, however, it prefers a policy of extenuation. Like the pirates of Avès, "A-swing with good tobacco in a net between the trees," it deadens its intelligence to the dangers of the course upon which it has embarked, forgetful that, as the same song says, "But Scripture saith, an ending to all fine things must be." In short, sooner or later, every man has to face squarely the same problem. It is this, that "the flesh lusteth against the Spirit, and the Spirit against the flesh;" and the realization of what this means must force home upon every one who does not shut, or at any rate partially close, his eyes to it, the significance of that other warning by Paul, "For the good that I would I do not: but the evil which I would not, that I do."

Polycarp insisted to the proconsul that he could not turn from good to evil in a day, and, no doubt, the Christians of Smyrna were even more convinced that they could not turn from evil to good in many days. "The divine demand, 'Be ye therefore perfect," Mrs. Eddy writes, on page 253-254 of Science and Health, "is scientific, and the human footsteps leading to perfection are indispensable." But, on page 9 of the same book, she warns her readers against hesitation and the disinclination to take those footsteps, when she says, "Are you willing to leave all for Christ, for Truth, and so be counted among sinners? No! Do you really desire to attain this point? No! Then why make long prayers about it and ask to be Christians, since you do not care to tread in the footsteps of our dear Master?" Human beings, just because they are human, cannot avoid these human footsteps. But they can avoid bargaining with Principle over taking them, and they can take them fearlessly and gladly, and not hesitatingly and perforce. Because a man needs to be clothed, he does not need to be clothed upon with vanity, and because he needs to eat and drink, he does not need to impart to eating and drinking any taint of sensuous appetite. The effort of the human being to turn from evil to good is, at all times, so deliberately accomplished that he need feel under no obligation to carry any unnecessary weights.

In taking even his first footsteps the student of Christian Science should keep his ultimate goal steadfastly before him. Mrs. Eddy makes this very clear indeed, on page 426 of Science and Health, when she says, "The discoverer of Christian Science finds the path less difficult when she has the high goal always before her thoughts, than when she counts her footsteps in endeavoring to reach it." Dwelling perpetually, as some people are apt to, on the necessity for suffering is almost bound to produce suffering, and, in the same way, insistence on the necessity for human footsteps, when the motive behind the insistence is the fabrication of an excuse for dwelling in them, can only end in painful and unnecessary delay.

Any responsible human being knows that human footsteps in the pilgrimage from the flesh to the spiritual are unavoidable, so unavoidable that it is scarcely necessary to talk about them. The philosophy of the nursery, "I can be good at any time," is bounded by the nursery walls. Experience answers the child in the words of the epistle to the Romans, "O wretched man that I am! who shall deliver me from the body of this death?" What Paul meant was, of course, sufficiently clear. He had learned that you could not believe in the flesh without suffering the pains of the flesh to the exact extent of your belief. Therefore he was in no hurry to give any unnecessary force to the belief he desired so earnestly to dispense with. He knew, as he made clear, that a man must take the human footsteps, and would take them probably all too slowly, but he did not propose to add to that handicap the handicap of exaggerating the mesmerism of the flesh. Nor did Mrs. Eddy, because she knew that the human being could not turn from darkness to light in a moment, ever propose that, whether his progress was fast or slow, he should take holidays, at intervals, from the pursuit of Truth, and temporarily cease working and praying, on the ground that such periods of rest constituted these inevitable foot-

Every physical manifestation is, of course, an expression of the human mind, since matter is nothing but the subjective condition of this mind. What, then, are termed human footsteps are those inevitable mental stages in the development of the individual's understanding of Principle. Since matter is merely a phenomenon, there is, in reality, no such thing as material food. It would, none the less, be in the highest degree unscientific for any human being to attempt to avoid the human footstep of eating while learning that material food is not an absolute necessity, but only an argument by which the human mind is helped in sustaining physical health and life. One of the first demonstrations which Christ Jesus made was that of his ability to do without material food. It was perfectly scientific for Jesus to do this, because he knew how to do it; but it would be as equally unscientific for the man who did not know how to do it, to impair his health and risk his life in a demonstration beyond his understanding. "Christ, Truth," Mrs. Eddy writes, on page 442 of Science and Health, "gives mortals temporary food and clothing until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually."

The example of food could, of course, be indefinitely extended. Eating is only one of the concessions which the student of divine metaphysics makes, entirely scientifically. while he is working out the various problems with which he is faced. Where he draws the line is necessarily a question between himself and Principle alone, since only he knows how genuine is the necessity for each concession, or human footstep. Some students necessarily progress more rapidly than others: all leave their footprints in the sands of what they regard as time, to be washed into oblivion as their understanding of Truth increases. But one and all are faced with the necessity for never reducing these human footsteps to human excuses. Christ Jesus' own words to John. when that teacher showed his surprise that he should have sought him out in order to be baptized by him, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness," are, when the full intent of them is grasped, some of the most solemn in the whole of the New Testament. This "Suffer it to be so now" has been made the excuse for an amount of hypocrisy which would be appalling if it were not scientifically unreal. At the same time, as a man sows, so does

[508]

FREDERICK DIXON.

the day of wrath."

he reap, and any one who stretches the meaning of the

words an inch further than their legitimate meaning, to

cover his own weakness or to silence his own conscience, is

simply engaged in laying up for himself "wrath against

Employment and Unemployment

gives one plenty to do. But, some one may ask, will that

alone enable a man to make a living? It will indeed, if one

applies the understanding of divine intelligence specifically

to the problem of right occupation and right pay. When a

man is out of work, the first thing he must consider is what

he has to offer in the world of labor. A desperate attempt to

get something indicates a wrong attitude. Instead, the

seeker must realize that he is to give his services for the

benefit of all concerned. The right attitude, moreover, is

not one of self-conceit but of self-respect. Genuine selfhood

is in Mind, never in matter. Thus the self which is to be re-

spected is Mind, or divine intelligence, expressed. Each one

must know for himself that man has intelligence and the

ability to be intelligently active. Real activity is construc-

tive and productive, because it proceeds from the one pro-

ducing power, infinite Mind, not mere brain or material body.

expression is unlimited right action, one proves that mani-

fest intelligence is what he has to offer. Every one, of course,

wants intelligence manifested. Once a man demonstrates

that he does express intelligence in just the way that is of

definite service, he readily finds that his right employment

is at hand. The first requisite is his own innate sureness of

divinely bestowed ability. This is not something to be talked

about with an air of human superiority; it is a spiritual fact

for each one to demonstrate through alertness in taking ad-

vantage of every opportunity. A man should not sit at home

and expect work to come to him; nor should he wander list-

lessly from what seems one chance opening to another. The

right effort is, first of all, metaphysical. It is the knowing that

Principle directs unerringly, gives boundless and immediate

opportunity for service, and is irresistible in its operation for

the benefit of all. Understanding this, a man can go forth

to prove that employment is omnipresent. This does not

mean that he is to outline that some particular employer

whom he approaches must put him to work. Even a refusal

may teach the seeker more of how he must manifest Prin-

This understanding of Christian Science is absolutely

Knowing that man expresses intelligence, and that this

THE endeavor to express intelligence in all circumstances

with infinite Principle invariably brings about the disappear-3 ^{3 3}

KIT --ic lid: :::

CCS --

ciple. And while he is learning the way of intelligence, and rejoicing in being active, he is entitled to know that Mind

sustains him here and now by providing him with just what practicable. It leaves no room for beggary. The instant a man decides to ask for alms or to advance himself by mis-

representations of any sort, he forfeits, to that extent, his ability to prove the presence of true work and true supply. To take the wrong way is an evidence of fear, which must be overcome by the sureness that the divine Mind maintains man in all circumstances. The willingness to work in accord

ance of limitations in the presence of the actual consciousness of good. Fearlessly a man must serve Principle instead of persons. As he knows that the divine Mind is the real employer and the giver of all good, he demonstrates that

tangible employment is continuous.

Each man or woman can prove this truth, in spite of any seeming conditions. Each so-called employer, moreover,

[509]

who understands the same truth and practices consistently in accord with it, can aid in demonstrating the availability of good for the many. The employer, in fact, must be certain that he, too, is simply serving infinite Principle, which gives abundant activity as the all-sufficient experience of man. Others, also, whose duty it is to aid the seemingly unemployed in proving the boundlessness of true work, need to realize the spiritual fact, and not spend their efforts vainly with fears and condemnations. The overcoming of any supposed condition of unemployment, any fear of lack, or any belief in industrial dullness, must be a real healing, instead of a temporary palliative. This healing comes about just in proportion as all understand how the wholeness of divine intelli-

gence is expressed as right action.

On page 118 of "Miscellaneous Writings" Mrs. Eddy says: "Self-ignorance, self-will, self-righteousness, lust, covetousness, envy, revenge, are foes to grace, peace, and progress; they must be met manfully and overcome, or they will uproot all happiness. Be of good cheer; the warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,-and obedience crowns persistent effort with everlasting victory." knowing and proving of man's true self as intelligence actively expressed coincides with the demonstration of satisfactory reward for all right effort. To be sure of one's self as the manifestation of Principle is to be sure of adequate supply. Each seeker for right employment must simply be consecrated in his obedience to the one Mind. As Mrs. Eddy says, on the page preceding the one just quoted, "God is the fountain of light, and He illumines one's way when one is obedient. The disobedient make their moves before God makes His, or make them too late to follow Him. Be sure that God directs your way; then, hasten to follow under every circumstance." Compare this passage, pointing to the fundamental sureness of unerring divine Principle as essential, with another passage (Retrospection and Introspection, p. 85) where Mrs. Eddy says: "Guard yourselves against the subtly hidden suggestion that the Son of man will be glorified, or humanity benefited, by any deviation from the order prescribed by supernal grace. Seek to occupy no position whereto you do not feel that God ordains you. Never forsake your post without due deliberation and light, but always wait for God's finger to point the way." In order to realize the completeness of true employment, one needs only to be steadfast in his reliance on the infinite consciousness of ceaseless right activity that is God, or divine Love.

GUSTAVUS S. PAINE.

[Written for the Sentinel]

Joy FLORENCE A. BOYD

HITHER, thither, comes and goes, Lighter than the wind that blows, Brightens grass and flower and tree, Dances off across the sea. Carols clear the glad refrain, Peace on earth, the heavenly strain; Blesses every living thing-For it is a thought a-wing.

Angel thoughts rejoice to fly High into immensity, Where Truth's beam and where Love's star Gleam for all, or near or far. Life's ideas are free as air. Here and there and everywhere; For, wherever they may roam, All God's universe is home.

Testimonies of Healing

Having received so much help from the testimonies in our periodicals, I desire to tell a small part of the blessings which Christian Science has brought into my life, in the hope of helping in return. A little over five years ago, in desperate need of physical healing, and as one catches at a straw, I for the first time attended a Wednesday evening meeting at the Christian Science church in London, of which I am now a member. I knew nothing of its teachings, but a practitioner whom I met, seemingly by accident, on seeing my great need, lovingly invited me to attend. I at first felt that I would rather go on suffering than benefit physically by a false doctrine, and it was with reluctance that as a last resort I decided to accept her invitation. I was weak and ill after a very serious operation which the specialist had been unable to finish, as he was afraid to keep me under the anæsthetic any longer, and informed me that I would have to undergo another severe major operation, although he said I could never be really strong. Every specialist I had consulted had said this; they were all most kind and sympathetic and would have helped me if they could. The health of another member of my family broke down, and as I had been leading an invalid's life for about sixteen months, I felt that I could not return home to continue to be a useless burden and expense.

At this first testimony meeting, it seemed as though divine Love were speaking directly to me through the Biblé passages read from the desk, and this, together with the sincerity and love manifested by those testifying afterwards, convinced me that Christian Science must be the truth for which I had reached out in vain all my life, and I asked my friend to help me with Christian Science treatment, to which she lovingly consented. My thought, however, was so weighed down by the memory of what I had suffered from operations and medical treatment, that I could not understand a word of Mrs. Eddy's textbook, "Science and Health with Key to the Scriptures," and often read a sentence dozens of times before any meaning was conveyed to me. I persevered, however, and at last a little light began to dawn, so that about the ninth night of study I realized that I was reading without the glasses which, owing to astigmatism, I had needed for reading since childhood. I had the oculist's prescription ready in order to obtain from him stronger glasses, as I had been suffering a good deal with my eyes and could not see to thread even a darning needle at this time. I have never worn glasses since that night, although my eyes have been put to severe tests. With this illumination of spiritual sense, I arose from my bed and made a bonfire of all my prescriptions and threw away all my medicine bottles and material remedies, knowing that I should never need any of them again.

One of the most comforting things about Christian Science is that truth is instantaneous; in a few days I was walking long distances without fatigue, and in a very few weeks was working hard in an office. Instead of being a burden on my dear ones, to my great joy and through the leading of divine Love, I took a flat in London on a five years' lease, where I have been able to entertain them on their visits to town. I am so grateful for my home and for the blessings, too numerous to mention, which Christian Science has brought into my life. I have taken care of my flat without a maid, besides doing a long day's work in an office, without missing half an hour from my work for reasons of health. I am deeply grateful for the quick healing

of a severe attack of influenza which came in the middle of the night when I was unable to ask for help. This was entirely overcome in two hours through the study of the chapter "Christian Science Practice" in Science and Health; also for the instantaneous healing of a badly sprained ankle. the healing of chronic throat trouble, a weak back, and acute neuralgia. Great as these physical benefits are, they are relatively small when compared with some measure of practical understanding, in the light of Christian Science, of the great truths of the Bible, and the purification of thought and unfoldment of good in human experience. My desire is to reflect more and more love and to help others to find the truth which makes free and thus to express, in some measure, my deep thankfulness to God and to Christ Jesus the Way-shower, and my gratitude to our Leader, Mary Baker Eddy.

(Miss) MARY BEATRICE AUSTIN, London, England.

٠

I did not come into Christian Science for any physical healing for myself, but in order to help my mother in her study of this wonderful truth. It has always been our custom to live up to our highest understanding of the truth contained in the Bible, and the memory of our connection with a church in former days will always be cherished as a stepping-stone to a better and higher understanding of God's Word.

For every experience in Christian Science I am grateful, but especially so for one along the line of protection. In June of last year I was caught in an elevator and my left arm was so wedged in that I was lifted off my feet and was being carried from the third to the fourth landing, when I suddenly realized that it was up to me to prove once more what I so dearly love,—the truth. I can honestly say there was no fear, for there was no time for fear. Instantly the thought came to me of a testimony I had given on the previous Wednesday evening, and the truth which I had then expressed flashed through my thought in a moment, when suddenly the elevator stopped and I was able to release myself. The workman who witnessed this experience came to me and excitedly asked what he could do, and I told him to "simply be quiet." I then went down to the second landing and found that the drive belt had allowed the cable to unwind, causing the elevator to stop and I knew this was only possible through one thing, the protective power of Truth. My gratitude can be realized.

Every day brings its joys, and the opportunity for further proof, which I know is only possible by living more and more in accordance with the Word of Life as contained in the Bible and made clear to us through the study of "Science and Health with Key to the Scriptures" and Mrs. Eddy's other works.

CHARLES L. TROUTWINE, Gloversville, New York.

4

About the first healing I had in Christian Science was of a very distressing case of stomach and bowel trouble which occurred after I had been studying for five months. For three days I struggled along, not knowing very clearly just what to do, but studied about seven or eight hours a day. At that time duty necessitated a walk of about two miles each day, which I was enabled to take. From the time I left home until I got back I kept mentally repeating the "scientific statement of being" from page 468 of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Lord's Prayer with its spiritual interpretation, and other statements from our text-

book. On the third day of my seeming inharmony I had a strong desire for ice cream, but thought at first that it would not be the best thing to eat while in that condition; then I remembered something I had read about material things having no power over man. As I pondered this truth, fear was destroyed, and I went in and had the ice cream, and came out healed.

About one year later a similar condition was manifested, and I got relief in a day's time. Again, after the lapse of writti:: another year, the condition returned. This time I turned thought completely from my body to Mind as the one and only cause and knew there could not be a bad effect from a perfect cause; in so doing I was healed in half an hour, and have had no return of that condition. I was very grateful for that experience, for it proved what Mrs. Eddy says on page 217 of Science and Health: "When you have once conquered Lett a diseased condition of the body through Mind, that condition never recurs, and you have won a point in Science." One day shortly after this, I was wondering why I had not been healed in half an hour the first time. The thought came that God's law was just as powerful then as at the last, but my understanding was not so clear.

While I am grateful for many physical healings, I am more grateful for the peace "which passeth all understanding," which results from the knowledge of what God is. I am grateful to Mrs. Eddy for giving "Science and Health with Key to the Scriptures" to the world, and also for the periodicals she established, which surely bless all mankind. I am grateful to all those who through the periodicals have helped me.-(Mrs.) Jane M. Watson, Fresno, California.

I am so happy that I must tell others of all the good I have received through Christian Science and how great is the change which it has brought about in my life. About twelve years ago I suffered severely from hernia, and was only able to do light work during those years. I was unable to lift anything heavy and could not lie on that side. It was at this time that Christian Science was brought to my attention. The next day I sought a Christian Science practitioner and received an instantaneous healing, so that I am able to say I was healed that selfsame hour. I am very grateful for this quick healing. Christian Science has enabled me to gain a better understanding of God and has made a new person of me, for I have learned to trust in Him alone in my daily work .- (Mrs.) MARIE POPPENSIEKER, Löhne, Herford i Westfahlen, Germany.

In April, 1889, I was healed through Christian Science treatment of an internal trouble of years' standing. In June, 1890, we passed unharmed through a cyclone. This protection was most wonderful, but most natural when one has some understanding of the operation of Christian Science. I did not know that anything more than an ordinary storm was taking place, but I took "Science and Health with Key to the Scriptures" by Mary Baker Eddy and sat down, the four children gathering about me. My husband proposed going to the cellar, but I said, "No, we will ascend in thought," and we were protected, although the town, except our house and a few close around us, was razed to the ground. The following Sunday ten carloads of people came from Lincoln and Omaha and other towns on the way to see the scene of destruction, and among them was my brother, not a Christian Scientist, who said that I was the only one he saw who did not look as though I had been sick. This was due to my clinging to the truth I had learned from Science and Health.

During the next few years two little girls were born to us. I depended entirely upon Christian Science and suffered very little pain with either birth. Since then all the troubles that have come to us have been overcome through our understanding of Christian Science, and I have been able to help others many times.

I am grateful for the healing in some degree of self-pity and of dependence upon what others think. I now see that the only true independence is in knowing what God thinks or knows, and thinking likewise. I am grateful for The Christian Science Journal, Sentinel, and Monitor, which have been marked influences in helping me to think rightly. I love to ponder with gratitude the joy of Mrs. Eddy as she stood alone with God in her endeavor, and the vision of what her work meant to sustain her. I love to know her more and more through her writings. She has enabled us to make the promises of the Bible ours by showing us that they were given for all time. I surely worshiped truly for the first time (though a member of a church many years) when I learned that God is good and could not give anything but good to His children.

(Mrs.) Anna Pope Simmons, York, Nebraska.

I desire to express my gratitude for all the help I have received through the study of Christian Science. I have had many physical healings, among them the overcoming of sick headaches, nervousness, influenza, chronic bowel trouble, and many other ailments. I had suffered from sick headaches in a very severe form ever since I was a small child. I tried many physicians, but they all failed to give me any relief. Finally I suffered a nervous breakdown and was forced to give up office work for a year and a half. It was while in this condition that I took up the study of Christian Science, and received my healing. The healing of the nervous condition and headaches was a slow one, but during that time I was healed of several other ills. Chronic bowel trouble which I had had for years was healed in one treatment and this healing has been permanent. I have never had a return of the trouble. Influenza, during the epidemic, was healed in one day. I am certainly very grateful for all these physical healings, for before coming into Christian Science I seemed to be constantly suffering and hardly knew what it was to feel well and strong, as I now feel all the time.

I have also received a great deal of help in other ways, in business problems, and in daily supply; also in the recovery of lost articles. Since gaining some understanding of Christian Science, there is not a problem that has come to me that has not been worked out by applying the truth. I am very grateful for all these blessings, but I am most grateful for the understanding I have of Christian Science, of God as divine Love and ever present. I am grateful to God and to Mary Baker Eddy, and I deeply appreciate the loving help which I have received from a practitioner, also from the Christian Science literature, which I find to be a great aid to me, together with the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy.

(Miss) Norma E. Simmons, Long Beach, California.

For a number of years I have been a student of Christian Science and have experienced many healings, for which I am most grateful to God and to Mrs. Eddy, who has shown us the way to this wonderful truth through her book, "Science and Health with Key to the Scriptures." When I first became interested in Christian Science I was obliged to wear glasses, and had worn them since my childhood days.

After reading Science and Health and the other writings of Mrs. Eddy, my glasses were laid aside, as they began to tire my eyes, and they have never been worn since. During the epidemic of influenza, I had a severe attack which rapidly developed into pneumonia. I was not living in a congenial atmosphere, and the constant demand of my relatives that I have a doctor seemed to deter my healing considerably. My sister, a Christian Science nurse, feeling that it would be best to move me to more congenial surroundings, called a taxicab, and I was taken to my sister's home, where there was no thought of fear. I am thankful to say that the need was met within a few hours' time after that, the alarming symptoms vanished, and I was soon up and around, with no ill after effects.

In addition to the help which I have received during various illnesses, the study of Christian Science has also enabled me to broaden out in a business way, and my supply is much greater, because I have learned to realize that God is the source, and that it can never be taken from me. Through Christian Science I have been healed physically and uplifted spiritually, and I appreciate more and more clearly its many blessings. One of these blessings is the Christian Science literature, which I may read and enjoy and share with others, for their blessing also.

(Miss) Rose Hackett, Chicago, Illinois.

4

I was brought up under good influences, my father being a clergyman in the Church of England, but in spite of this I early developed evil tendencies, which led me into many bad habits, and finally to an attempt at self-destruction, which left me totally blind.

"If ye live after the flesh, ye shall die." Christian Science teaches that all that can die is false appetite, false pleasure, all false belief about that which is good, true, pure, and real. Five months after the attempt to end my troubles in the wrong way, Christian Science came to me, and has taught me how to end them in the right way. The following manifestations and beliefs have been overcome through Christian Science: the belief that God is a corporeal being seated on a throne somewhere beyond the skyline; the daily practice of secret sin for many years; the desire to indulge in and hear vulgar and profane conversation; the excessive use of intoxicating liquor, which was taken with the thought that the more I drank of it the stronger would be my courage to follow the fleshly lusts; the use of tobacco, both chewing and smoking, to both of which I was a slave, and the desire for gambling and the dishonesty connected therewith.

In addition to the above I have been freed from the desire for tea and coffee, which I used to excess, also from various physical difficulties, of which chronic catarrh seemed to be the most distressing. I have peace of mind and the assurance that I am on the right path at last, and for all this I am indeed grateful.

RALPH M. DUFFIELD, Denver, Colorado.

٠

It would be impossible for me to tell of all the blessings I have received through the study of Christian Science. I have been reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, for over twenty-five years. The textbook was brought to my home by a visitor, who spent the winter with us, and I read it during all my spare time. It seemed so wonderful and beautiful, I felt I had found what I had been wishing for, as my past life had been filled with unsatisfied longings. I was full of fear and without

hope in a future life. The study of Mrs. Eddy's writings has changed my whole outlook on life, and words fail to express the gratitude I owe to her for her untiring work of love for humanity.

The chapter in Science and Health, "Christian Science versus Spiritualism," helped me better to understand that as we realize more what Life is, we see that death is an illusion. In the words of Mrs. Eddy: "Existence continues to be a belief of corporeal sense until the Science of being is reached. Error brings its own self-destruction both here and hereafter, for mortal mind creates its own physical conditions. Death will occur on the next plane of existence as on this, until the spiritual understanding of Life is reached" (Science and Health, p. 77). As I had never been a member of a church and did not understand what God is, I felt I was in the dark and was quite unhappy, and I had two young boys who, I felt, ought to have the right idea of God. We were then strangers in the city in which we lived, but I soon found a Christian Science practitioner and was healed of all my physical troubles in a short time. I felt like a new person after having been sick for over a year. The next Sunday we attended our first Christian Science service and Sunday school. I never can forget the love I felt at that service; I was very happy indeed. It has proved one of the greatest blessings, and a comfort to me to have my sons grow up with such help as they have had all these years in the study of Science. They love its teaching. I owe all I have to Christian Science.

(Mrs.) NELLIE M. WHITESIDE, San Jose, California.

٠

In January, 1918, I was stricken with severe articular rheumatism. My parents immediately turned to an efficient physician, who prescribed for me. However, my condition became so much worse that my parents had no hope of my recovery, for a nervous heart trouble had also developed.

In their extremity my parents acted upon the advice of friends, and called a Christian Science practitioner. Even within a few days one could see the results of the healing truth. My limbs became less swollen, the pain was relieved and my heart action became nearly normal. To the great astonishment of the physicians I was able to be up for several hours during the day and am now strong. We have proved for ourselves that a firm, understanding faith in God heals. Daily I thank Him that through Mrs. Eddy the truth has again come to the world.

(Miss) P. FUHRMANN, Bielefeld, Germany.

٥

So-called mortal mind is trying to tell us these days that there are no vacant houses, flats, or apartments, no place to move; and it behooves us all to know that God governs, and no matter how loudly error may scream, we, as Christian Scientists, know that each one has his place in divine Mind as idea. As this becomes clear to us our right place, humanly speaking, is manifested. God's ideas cannot crowd, or push each other about. Each one is guided, governed, and maintained in his right place.

Recently, while looking for a place to move into,—for our building was sold, and the owner wished to occupy it himself,—I was wonderfully helped by loving friends. First, one sent me the verse in Exodus, "Behold, I send an Angel before thee, to keep thee in the way, and to bring thee into the place which I have prepared." I realized that mortal mind had no power to move me about, but that Love was leading me to a better place. It was my part to know this, and to stand in the realization that divine Principle,

Love, governs all, and through spiritual law our place would be made manifest. We could not be confused or misled into taking the wrong step, for there is but one Mind.

The suggestion of exorbitant rent was met with a song in our hymnal (No. 149):-

Wherever He may guide me, no want shall turn me back; My shepherd is beside me, and nothing can I lack.

Finally, another friend telephoned me of a flat near her on a very desirable street, and much better in every respect than the one we were occupying. The rent was higher, but there were eight large rooms, whereas we had had only six, and there were many conveniences we had not had, such as janitor service, for instance. As I contemplated this home, I was filled with gratitude to the Giver of all good, and to the many loving friends who had helped me. Many times while solving this problem I was lifted to the mount, and was able to see spiritually,-to discern the allness of God and the ever presence of Love .- (Mrs.) MARIAN LELAND WHITEMAN, St. Louis, Missouri.

So many times have I found renewed courage and strength in reading the testimonies of healing in the Christian Science periodicals, that I am glad to avail myself of this opportunity for expressing gratitude with the hope that I may in this way

As I look back now, I can readily see that I never truly lived until I found Christian Science, and yet for the first year or two after I took up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy I often became discouraged over the slow progress I was making. As I continued to "strive to enter in" the way became clearer. My biggest problem seemed to be one of supply, but as soon as I realized that I had been clinging to dependence on human personality and had feared to place radical reliance on God, I was enabled to find a place for myself in the business world and to prove that God has work for every one of His children to do. Through the aid of Science I have been able to demonstrate, in some measure, the fatherhood and motherhood of God in providing a home and caring for my small children. Ills common to children as well as minor accidents have been quickly met in our family, sometimes by singing together our inspiring hymns or by repeating the "scientific statement of being" (Science and Health, p. 468). The hymns particularly seem to have aided the children to grasp the Principle of Christian Science. Not long ago my seven-year-old daughter told me that a bee had stung her on the hand while she was playing in the school yard. She told me that she had declared that God is Love and that He would not let anything hurt her, and that this had instantly proved to be true.

About three years ago, I had an opportunity to prove the ever presence of Love, when there was no human aid near. I was staying on a ranch with relatives, and was alone with the children when the opportunity came. A bottle of strong carbolic acid had been left on a table on the screened porch. I was inside the house and glanced out of the window opening upon the porch just in time to see my young son, then three years old, lift the bottle to his mouth. When I reached him he was screaming, and his mouth and throat were white from the acid. I took him in my arms and asked the man who was working on the place to go to the nearest telephone, half a mile distant, and call a Christian Science practitioner. He replied that he would go and call a doctor. Left alone, I began to realize the truth about God and man, and in the moments that followed I lost all sense of time, for I had caught a glimpse of the truth. About half an hour later the

doctor arrived and found the little boy sleeping peacefully. He told me afterwards that he only came out of courtesy, as he confidently expected that the child would not live until he reached there.

So many blessings have come to me through the understanding of God as Truth and Love that I could not begin to enumerate them all. I am more grateful than I can say to Mary Baker Eddy for her revelation of the Christ, Truth. I have new cause each day to be grateful for all the channels for good which she established, especially for the Lesson-Sermons, which unfold the truth so wonderfully week by week, and always bring a new and needed message.

For the church services, the Sunday school, and for the Christian Science periodicals I am very, very grateful. Each of these channels seems to unfold the truth in its own way and each is like a very dear friend to me.

(Mrs.) Maud W. Makemson, Phoenix, Arizona.

Having been brought up from childhood as an agnostic, I came to Christian Science with an open mind, and found the living truth in spite of, or perhaps because of, an education intended to prevent me from accepting any form of religion. I was trained in logic and taught to accept nothing that could not be proved, and the Bible was only familiar to me as an example of wonderful literature. As I was left motherless when very young, there was no influence to counteract this teaching, and yet in spite of all, I had a very strong instinctive faith that God did exist, and when I grew up I used to wish that I could believe the teachings of Christianity, but they seemed to me too inconsistent, and I could not find any proof of God's existence in any of the denominational churches. I arrived at definite proof of God's existence through several remarkable answers to prayer, though I was perplexed to find that there seemed no rule to follow, and that sometimes prayer brought no result. When Christian Science was brought to my notice, I began to weigh its truths and to try to prove them, just as I had been taught to do with everything; and, somewhat to my surprise, I found that it worked; that if I faithfully applied the rules in an honest attempt to prove them, the right result followed. Mrs. Eddy tells us in "Science and Health with Key to the Scriptures" (p. 327) that "reason is the most active human faculty," and certainly it was reason, and not sentiment nor even great need, that brought me to accept Christian Science. Then I found I could accept Christianity after all, since the understanding of the Bible which Christian Science brings revealed the teachings of Jesus the Christ as demonstrable law, and reason was satisfied. I am truly grateful that it was apparent to me from the start that if Christian Science was true it was the only thing worth striving for and would in time redeem the world from sin and suffering.

For eight years Christian Science has met my every need. and each year brings greater courage and liberty and joy. I have, of course, had many physical proofs of the healing power of Truth. On one occasion, a badly sprained shoulder was perfectly cured by my reading Science and Health for half an hour; another time a bad attack of what seemed like pleurisy, which I had once before suffered from before I knew of Christian Science, was overcome in one night with Christian Science treatment, and on two occasions I had cavities in my teeth filled without any pain, though in each

case the dentist said there would be great pain.

I am very grateful for all the blessings which Christian Science brings, and I am thankful to all who have helped, and are helping, to bring this healing truth to weary humanity.—(Miss) NINA SEYMOUR KEAY, Stroud, England.

Signs of the Times

["The Gift of God"—The Christian Science Monitor, Boston, U.S.A., January 3, 1921]

At a time when so many people have been giving and receiving gifts, it is well to consider seriously the source of all giving, and to ponder its nature. Though so many so-called Christmas gifts are purchased with money, real gifts are "without money and without price." Honor, glory, peace, joy, "the lofty rime," cannot be bought, nor in any real sense can they be given, any more than two times two are four can be given away. The giver must himself have gained that which he gives by demonstrated understanding, and he who receives must prove that he has received by his works. Giving exhausts not, nor is there less because of that which has been given. So the oil in the cruse failed not.

Unless the thought of gratitude and unselfed affection accompany the gift, the gift is bare, as Lowell so well said when he made it clear that a gift is just the inevitable sharing with another of the truth that one has perceived. So he

Not what we give, but what we share,
For the gift without the giver is bare;
Who gives himself with his alms feeds three,

Himself, his hungering neighbor, and me.

Mrs. Eddy expressed it metaphysically on page 206 of Science and Health, where she says, "In the scientific relation of God to man, we find that whatever blesses one blesses all, as Jesus showed with the loaves and the fishes,-Spirit, not matter, being the source of supply." In other words, Spirit, God, Mind, is the source and essence of every true gift. Since God, Mind, is infinite, and the only universe the spiritual one, all gifts, as well as everything else, must be found in Mind. Now to the materialist such gifts are intangible and vague. So was the "living water" to the woman of Samaria. She asked for it that she might not again be vexed by thirst, nor obliged to go to the well to draw, but she did not understand that it was a spiritual gift, unknown to mortal taste, yet "springing up into everlasting life." So also Simon thought that the Holy Ghost, the power of spiritual understanding, could be bought, and he brought down upon himself the terrible wrath of Peter, who turned upon him with the righteous rebuke: "Thy money perish with thee, because thou hast thought that the gift of God may be purchased with money."

But though the "gift of God" cannot be purchased, the true man has it, and from receiving it he cannot escape. Peace, joy, glory, honor, grace, wisdom, freedom from fear and discouragement, abundance of riches, rest,—these, that cannot be bought, are gifts of God to all who come "to the waters." "The gift of God is eternal life," said Paul, and Christmas comes to us with the birth of the spiritual understanding of our possession of this gift.

How this is so is explained by the Comforter, divine Science, which guides us into all truth, as Jesus foretold. For the Christian Science textbook, "Science and Health with Key to the Scriptures," written by Mary Baker Eddy, together with Mrs. Eddy's other writings, makes very clear the real man's scientific relation to God. These writings show how it can be proved and must be proved, that because God is all-powerful, all-active Principle, the infinite Mind which created man in His image and likeness, this man, the idea of Mind, must reflect and receive "every good gift and every perfect gift" from the Father. That is, man must of necessity reflect every quality of the divine source, in which is no element of matter. This is explained by Mrs. Eddy on page

303 of Science and Health, as follows: "God, without the image and likeness of Himself, would be a nonentity, or Mind unexpressed. He would be without a witness or proof of His own nature. Spiritual man is the image or idea of God, an idea which cannot be lost nor separated from its divine Principle." And on page 304 of the same volume she says. "This is the doctrine of Christian Science: that divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death. The perfect mangoverned by God, his perfect Principle—is sinless and eternal."

These gifts of glory, honor, joy, eternal life, having been freely received, we are told to freely give. Iesus said that when we had "done it unto one of the least of these," our brethren, we had done it unto him. That is, when we see not the sick, not the sinful, not the burdened, nor the mentally deficient, but in their stead we scientifically perceive the infinite manifestation of infinite Mind, we are, in the measure of our understanding, and in the measure of our reception of the gift of God, giving it again, doing it "unto one of the least of these." We use the gift of God as we think aright, think in accordance with the first chapter of Genesis, where God saw that all that He had made was good. We bestow the gift of God when we see with eyes too pure to behold sin, disease, or death. The perception of the reality, the power, the presence, and intelligence of spiritual understanding, of thoughts of health, goodness, righteous judgment, is necessarily the perception of the unreality, the impotence, the absence, and the mindlessness of the claims of sickness, evil, or human power. This spiritual discernment does not ignore the seeming sense evidence, but eliminates it, replaces it with the truth. So did Jesus eliminate and destroy the belief that Lazarus had died.

It must ever be borne in mind that we cannot do it "unto one of the least of these" until we have done it for ourselves; we cannot give away the gift of God until we have made it our own by the unfainting, steady adherence to the substance, power, and infinite presence of the one Mind. It was because he had made the gift of God his own, because he had come to reflect the thoughts of God, that Peter could effectually say to the lame man at the gate Beautiful, "Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk." The gift of the God who is Life, Mind, Principle, is the spiritual understanding of Life, Mind, Principle, as omnipotent, omnipreent, and omniscient. It is the gift of the power of spiritual understanding, which is itself the reflected power of God.

4

[From Address by Rear Admiral Sims before Loyal Coalition in Boston, Massachusetts, as Reported by The Christian Science Monitor]

Rear Admiral Sims traced the history of the relations during the war between the United States Navy and the British Grand Fleet, lightly illustrating the otherwise technical description with anecdotes of navy life. He pointed out the great things achieved through unselfish cooperation between the two English-speaking nations and with the other allied naval forces.

"I cannot see," he declared in summing up the war's lessons, "that there need be any misunderstanding if we approach our inevitable commercial and other difficulties in a friendly spirit. If people can cooperate loyally under the fierce stress of national interests and personal ambitions in war, surely they can with good will cooperate in peace. In my estimation, as something of a student of war, a failure to cooperate with a certain degree of cordiality is a danger....

W. G. The nations must find a way to compose their differences. The only sure basis is a spiritual one; it is through the power of sentiment. Personally, I believe it will depend chiefly upon the initiative being taken by the British and Americans, and that a permanent understanding between them will inevitably result in peace and good will throughout the world. Personally I believe that, whatever the ultimate agreement or association for the prevention of war the unity of English-speaking peoples in unquestionable friendship and understanding will play an essential part, not to invade the rights or exclude the fellowship of other nations, but to include them and help protect them. Now those words are not mine. You have read them in the paper, and so have I. They are the expressions of the sentiment and opinion of Mr. Warren G. Harding, who is going to be President of the United States."

[From The Times, London, England]

No one will seriously dispute that knowledge of disease is at present extremely defective. It is so defective that, within the last month, Sir James Mackenzie and his band of research workers at St. Andrews have openly avowed that in upwards of ninety per cent of all cases coming for medical examination and advice, putting aside trivial complaints and minor injuries, they are unable to "state the nature of the patient's illness with any degree of accuracy." True, they can call a headache a headache; a pain, a pain; exhaustion, exhaustion; weakness, weakness. That, however, is merely recording symptoms; it is not interpreting them.

If this pioneer, with a great record of discovery behind him both in general and in consulting practice, and those whom he has gathered to work with him are forced to make such a confession, can we suppose that the overworked doctor is likely to be more fortunate? He, too, will encounter his ninety per cent. . . .

No maker of statistics can possibly tolerate the kind of records which avoid conclusions. You could not classify such things. Clerks would fail utterly to comprehend them. In consequence, sooner or later, that absurd volume, the "Nomenclature of Disease," will be produced, as it was produced during the war, and doctors will be invited to group their findings under one or another of the "headings." We shall then see again the ignominious spectacle of medical men fitting the symptoms to the disease instead of the disease to the symptoms, for all the world like getting one's feet into boots too small to hold them. Inspectors and ministries do not want observations; they want conclusions which will allow them to take action. We have Sir James Mackenzie's word that, in ninety per cent of cases, conclusions are at present impossible. And so these new record cards, as the doctors see and are saying, are useless. They will tell us nothing but the untruth. Untruth will go to Whitehall and be bound in blue covers. We shall learn anew that we are the least healthy nation in Europe, or the world. Great and costly schemes of regeneration will be submitted to Parlia-

[From "How Did Mrs. Eddy Discover Christian Science?" by Dr. James L. Gordon, Pastor First Congregational Church, San Francisco, California]

Mrs. Eddy was a genius and she had her own way of putting things. For instance, she affirms that God is not a personality, but a Principle. What she means is that God is not a person as we understand personality. Our idea of personality is a spirit incased in the limitations of flesh and blood and time and sense. Mrs. Eddy's idea of God is an infinite individuality whose influence is subtle, all-pervasive, and omnipresent; an eternal and everliving intelligence, as

near and close as the atmosphere and as boundless as the limitless regions and reaches of universal thought. Mrs. Eddy has her own peculiar idea about prayer. She says, "God is not influenced by man" (Science and Health, p. 7). What does she mean? She means that we are living in a universe which is governed by law. The secret of every blessing is in obedience to the law. . . .

A church must be judged by the type of character which it produces or attracts. We have made a rather thorough inspection of the followers of Mrs. Eddy and they look good to us. I like the Christian Scientist because he has the glow, fervor, and enthusiasm of a deep religious experience. John Stuart Mill once said: "Beware of the man with an experience," and Harriet Beecher Stowe once remarked, "What you have once seen you can never unsee." You will recall also the words of the young evangelist who affirmed, dogmatically, "If you've got religion you will know it. If you don't know it you haven't got it. If you've got it, you will live it."

[From The Biblical World]

The one hope of the Protestant churches to-day, as in other days, lies in keeping abreast of intellectual and social forces. Temporary popularity of preachers, and enthusiasm for irrational hopes do not argue lasting significance. Permanence belongs only to what is rational. To doubt this is to flout history and deny God. But will intelligent Christians support the church as an institution? Or will they in disgust abandon it to its fate at the hands of untrained and untrustworthy leaders? That is a real question just now, and one for which we could wish an affirmative answer were more immediate. Between the theological demagogue and the academic dogmatist there is nothing to choose. Religion can no more thrive upon technical scholarship alone than health can be derived directly from treatises on physiology. . . . Information is not activity. Religion must be made intelligent, but it must be more than academic. It must be vital.

[From The Living Church]

We stand on the threshold of another year. Of course that seems a trite saving but it is as true to-day as it will be on July 1 or on September 15. As we die daily, so daily do we begin to live. On January 1, however, habit bids us hesitate and think; asks us to take stock not so much of things already possessed as of things we would like to own, or that we know we ought to desire, as individuals, as a nation, as a church. Daily the church and the nation and the world stand with us at the same threshold. We cannot peer down the lane ahead without being conscious that millions of eyes are looking in the same direction, and we know that what we see is not worth going after unless there is enough of it to go around. . . .

Again we contemplate the mystery of time. It does seem endless, and the mere thing itself stands out more sharply than ever as having nothing in particular to do with what has or has not been accomplished. . . . The accomplishment of newness in us and through us is more to be desired than time itself. This, then, is our great desire for the New Year-newness supplied by God. We leave everything behind. That makes for new things, new men, new judgments. The things that were ours this time last year can never be ours again, and we do not want them. Friends have drifted apart. The old ones we still possess are ours only when they, too, are new, having absorbed newness. The things we liked are altered. The things we thought

perfect we now make light of when they have not changed; the things-houses, people, doctrines-we once disliked we now love for the very element of newness we have discovered in them. . .

To assist in bringing this about, individuals sometimes make resolutions. But new ones are not needed; strength and courage are. We recall the gibe of the comedian, "Resolutions! yes, we make them, not to keep them but to break them, for we're only poor, weak mortals after all." But we are not. We have Christ, and in him is no weakness at all. For the New Year, then, let us have no new resolutions save the determination to use the strength that is ours. The church and the world and we will be better for it. It will hasten the completion of the newness whose light God has shed abroad in our hearts.

[From The Boston Herald]

The secretary of the American School Citizenship League has just received word that the French minister of public instruction is about to conduct throughout the schools of France the essay contest that was devised and is carried out by the American school league. This addition of another country to the important ones already aiding in the spread of training for citizenship among their school children greatly encourages the friends of the work everywhere, the secretary

says, and he further states:-

"One of the hopeful tendencies in the reconstruction period after the world war is the responsibility which educational leaders have taken to promote a world outlook for the establishment of a durable structure of the world order. During the peace conference educational thinkers pressed the view that the stability of the world depends primarily upon the aims and methods of the educational systems of the nations, and the definite proposition for the creation of an international bureau of education which should act as a central force and medium of exchange in all matters pertaining to education throughout the world was presented to the League of Nations Commission. This plan was supported by the department of superintendence of the National Education Association and the general education board of the United States, the Workers Educational Association and the National Union of Teachers of Great Britain and Ireland, the international council of women and conference of women suffragists of the allied countries and of the United States, and the meeting of delegates of allied associations for a society of nations.

"Although the international bureau of education is not yet organized, educational thinkers in all countries are formulating plans through which education may perform its full service in this critical period of world history. We have many evidences of this educational motive. There has recently been founded and endowed in London, through the generosity of Edmund Rothschild, an institut de France, whose purpose is to enable French students to study in England and incidentally to become acquainted with English manners and customs. The international university established at Brussels a few months ago, which is subsidized by the League of Nations, the international school at Copenhagen, the organization of the International Federation of University Women in London last summer, the University Union in Paris, and the Institute of International Education in the United States all indicate an intelligent desire of the intellectuals of the world to cooperate for peaceful progress.

'The world essay contest of the American School Citizenship League, just announced, which is open to the normal

and high school students in every country in the world, presents a concrete effort to stimulate a serious study of world relationships. No one can estimate the far-reaching effect of high schools throughout the world simultaneously studying the subject, 'The most effective method of securing cooperation as against competition between nations,' the title announced for the high school contest this year. The essay contest has been an annual affair in the United States for the last dozen years, and in most schools it is made part of the regular work, either in history, English, or civics. Esperience has shown that the contest not only promotes interest in the subject by the members of a class, but this interest has estended to the home and has stimulated the adoption by libraries of books on international relations necessary for the research work involved in the essay contest.

"The first prize in the high school contest last year was won by a British student. In previous years, prizes have been awarded to Belgian, Austrian, German, Australian, and Italian students. The American School Citizenship League is already assured of the introduction of the essay contest in the schools of the several countries for the coming year. Now comes the welcome news that the minister of public instruction in Paris is about to start the contest in the schools of France."

[From The New Statesman, as Quoted in Public Opinion, London, England]

Terrorism is the statesman's boomerang. It seems a splendidly effective weapon as it flies off on its mission, but it has a habit of coming home. It would be possible, we imagine, for a mathematician or physicist to put the truth of the matter in a formula or diagram. History is a long chronicle of the actions and reactions of terrorism and, though the facts are both confusing and contradictory, we may gather from them at least one conclusion—that, while the object of terrorism is order, its result is simply more terrorism, till terrorism is exhausted and either justice or ruin takes its place.

[From "The Twelve Apostles of American Newspapers" in Boston Evening Transcript]

It is impossible to get up a symposium even of all the newspaper men of the United States on the question of their favorite paper, or the paper most highly esteemed by them. but a symposium on that question has nevertheless been held. A vote has been taken by a member of the staff of the Augusta (Georgia) Chronicle, and reported upon at length by him in the columns of The Editor & Publisher, a periodical issued in New York in the interest of newspaper people. What he was after was information for his own benefit. as to the best paper editorially. Now to get his information, naturally, he applied to newspaper people, because they are the only sort that know a great many papers—know papers from one end of the country to the other. He sent around his questionnaire, and it said: "I want to know which newspapers are your favorites from a purely editorial point of view; not which papers are the biggest or carry the most advertising. or publish the finest features, but which have the best editorials." He obtained answers from men (in one case a woman) from all over the United States. . . . The Christian Science Monitor, it is now apparent, has got into this list; and the reason is no doubt the universality of its subjects, the thoroughness of its study of them, and the sort of abidingness and sincerity of the quality of its comment, which takes them out of the usual touch-and-go style of editorial comment.

Sincerity, after all, is the touchstone of merit in editorial writing. Ability, force, knowledge of facts, logic, "punch"

00000000 there should also be; but without sincerity all these are as sounding brass and a tinkling cymbal. An interesting circumstance in connection with these twelve favorite papers is that they are all old papers, with the exception of The Christian Science Monitor, and (as old papers go) the Kansas City Star,—the Star being a mere youngster of forty-one years of age, while the Monitor dates only from 1908.

[From Bulletin of the Massachusetts Audubon Society]

The law forbidding the sale or possession of the feathers button of native birds is very well observed in this state, at least so far as the stores dealing in millinery are concerned. This is the federal law, and the milliners live up to it. Now and then a representative of the society inspects the stock offered done for sale and rarely does he find cause for complaint. When ware such has occurred, the responsible store official has pleaded ignorance and has been quick to remove the cause. So far as our native birds are concerned, it would seem as if the storekeepers are really interested to obey the law.

[From an Address by Dr. Alexander C. Humphreys, President of Stevens Institute of Technology]

Mental thrift, in the first instance, is of far more importance to the world at large than material thrift. First, because this leads to right thinking and so gives us the basis for right doing. And right doing will necessarily lead to material thrift. I am, of course, not including that kind of "thrift" which designedly aims to accumulate selfishly at the expense of others. In the intellectual field the responsibility for straight and honest thinking should be greater than in any other one field. . . . The "Intellectual" who is originally honest in intention but who is not strong enough to change his expressed views as the truth opens up to him, becomes a direct and positive menace to society, because he is not even teaching what he believes. . . .

If the "Intellectual" carries a grave responsibility in connection with mental thrift, the business man and financier also carry their special responsibilities. The latter are charged with the responsibility of thinking straight and doing straight in their activities. They cannot all be leaders, but they can all think and do straight according to their several lights. . . . Many of those in control of our daily papers and other periodicals, instead of aiming to lead the masses to straight and honest thinking, are constantly aiming to anticipate the ignorant and undigested thoughts of their readers. . . . Mental thrift means straight, direct thinking to the truth—and then the holding on to that truth all the more firmly for its age, if it has successfully met the searching tests through its years.

[From The Intercollegiate Statesman]

We notice in papers received from Great Britain that the wet leaders "were exceedingly gratified" over the results of the vote in Scotland. As we see it, however, only very superficial thinking can give them much reason for gratification. Considering the fact that the liquor traffic has been thoroughly intrenched there down through the centuries, the significant thing is not that one hundred and forty-nine districts voted to remain as they were but that in eighteen districts the people voted for a decided change from the existing condition. There was nothing unusual about the fact that until a few years ago the Chicago River flowed into Lake Michigan, as it had been doing for hundreds of years. But when the farseeing engineers of the city, in order to protect

the health of two million people, reversed the current of the stream, making it flow out of the Lake and through the Illinois and Mississippi to the Gulf, that fact was full of meaning.

["Protestantism in Spain," from an Article by Tyler Dennett in the Methodist Centenary Bulletin as Quoted in Boston Evening Transcript]

Spanish Protestantism celebrated a year ago the end of half a century of religious toleration by a Congress of Religion in Madrid. At this time the great mass of Spaniards are thinking quite as earnestly about democracy and republican government as are the people of Britain, France, and Italy. The political and religious situations are closely connected, I found on the visit to Spain, with the Centenary European Deputation. The Protestants are identified with the Liberals. . . .

Before me lies one of the great daily newspapers of Spain, which I bought while in that country. On the front page is a two-column head over an official note which was sent to Germany. On the next page is a two-column advertisement inserted by the Bible Society, headed: "Wilson and the Bible." Below the headlines is a translation of his message to the American soldiers. The Bible Society reports that in the year just concluded more than 133,000 copies of the Bible and Bible parts were sold in Spain, an increase of more than 30,000 over the previous year.

[From "The Electron" by Robert Andrews Millikan]

After all, the evidence of our eyes is about the least reliable kind of evidence which we have. We are continually seeing things which do not exist, even though our habits are unimpeachable.

[From "The Pilgrim and His Pilgrimage" by the Rev. George A. Gordon, D.D.]

All power is invisible; the power by which the river runs and the sea rolls and the planet flies and the constellation moves and the whole stellar universe pursues its everlasting heavenly way; all power is invisible. . . . How do you know your friend? You never saw his mind; he never saw yours. . . . You take your friendship, first of all, on trust, primal, aboriginal, absolute trust.

Church Notices

BOSTON, MASS.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

CHURCH TENETS.-The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size $8\frac{1}{4}$ " x $10\frac{3}{4}$ ". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hear-

ing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to Intervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

Orders for Pacific Coast and Rocky Mountain States

In order to facilitate the filling of orders for the Pacific Coast states and to expedite delivery, orders and remittances from reading rooms and individuals in the five postal zone east of San Francisco, with the exception of orders and subscriptions for *The Christian Science Monitor*, *Journal*, *Sentincl*, *Quarterly*, and *Heralds*, should now be sent direct to The Christian Science Publishing Society, Pacific Coast Depot, 255 Geary Street, San Francisco, California.

The Pacific Coast Depot will continue to handle subscriptions and supply periodicals only to San Francisco and immediate vicinity.

The first five zones east of San Francisco include all of California, Oregon, Nevada, Washington, Idaho, Utah, Arizona, and approximately all points west of Billings, Montana: Cheyenne, Wyoming; Denver, Colorado; and Las Vegas. New Mexico, including these cities. The local post offices in the last four states mentioned will supply further information regarding the fifth zone limit.

The above notice does not apply to Canadian territory.

European Orders for Bibles

The arrangement of the Publishing Society, whereby the Christian Science reading rooms in Great Britain and Continental Europe have been accustomed to order Bibles directly from the Oxford University Press, London, sending payment for these orders to The Christian Science Publishing Society in Boston, has been discontinued, and these reading rooms are now requested to send their orders accompanied by remittance to the London office of The Christian Science Publishing Society.

The Oxford University Press will henceforth fill for the Publishing Society only those orders received through our London office. Address all such orders for Bibles to The Christian Science Publishing Society, Amberley House, Norfolk Street, London, England.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlet in Russian

There is now on sale a new Russian translation of "Christian Science: Its Advantage to Mankind" by Edward A. Kimball, with alternate pages in English. Price 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U. S. A.

dr. T

FT 3:

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading.

The business world to-day demands of newspapers better things than it has ever before required.

The news item reprinted below emphasizes this fact:

which TRUTH IN NEWS AS AN des of opport. AID IN ADVERTISING ain with such as ing drawn in, the inwind CHICAGO, Illinois-Newspaper adbroadest vertisements are believed by readers who will in direct proportion to the truth of news stories among which they are placed, according to Tracy Ellis of claim it? equa!1 course, to Jame Indianapolis, who addressed the Betdramatic ter Business Bureau of the Associated falle welcome Advertising Clubs of the World yesterday. me, like Confidence sells goods," he said. "The newspaper which makes a de-termined effort to build up great reader confidence in its news and el, from ner home ted firstof arg Jameso editorials will consequently through selling more adver profit advertising cism, a her art through come of amploy-Just as the public shops for quality in merchandise, so advertisers tells us. are selecting newspapers which stand high in reader confidence." ferred. tion's at woman

In connection with the above news item the comments of a reader of THE CHRISTIAN SCIENCE MONITOR when writing about his subscription are interesting and are as follows:

ural

h, in-

ONE is reminded of a saying of Robert Louis Stevenson,—that he hoped to "live far from the shadow of a newspaper." It is pleasant to remember that he reached a desired haven where he was at peace. But there are three at least who rejoice in a happier concept: that they may dwell in the clean, warm sunlight of The Christian Science Monitor. It has blessed each member of this household. We have been exceedingly grateful for the Children's Page—one of us in particular.

We do not know the editor, the business manager, the foreman of the composing room. We hope that they are the best Scientists ever. But Principle is the light the Monitor reflects, and that light shines brightly enough in and through its columns so that we do know they are not getting in front of it to any appreciable extent.

Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German.

Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

MINITE.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

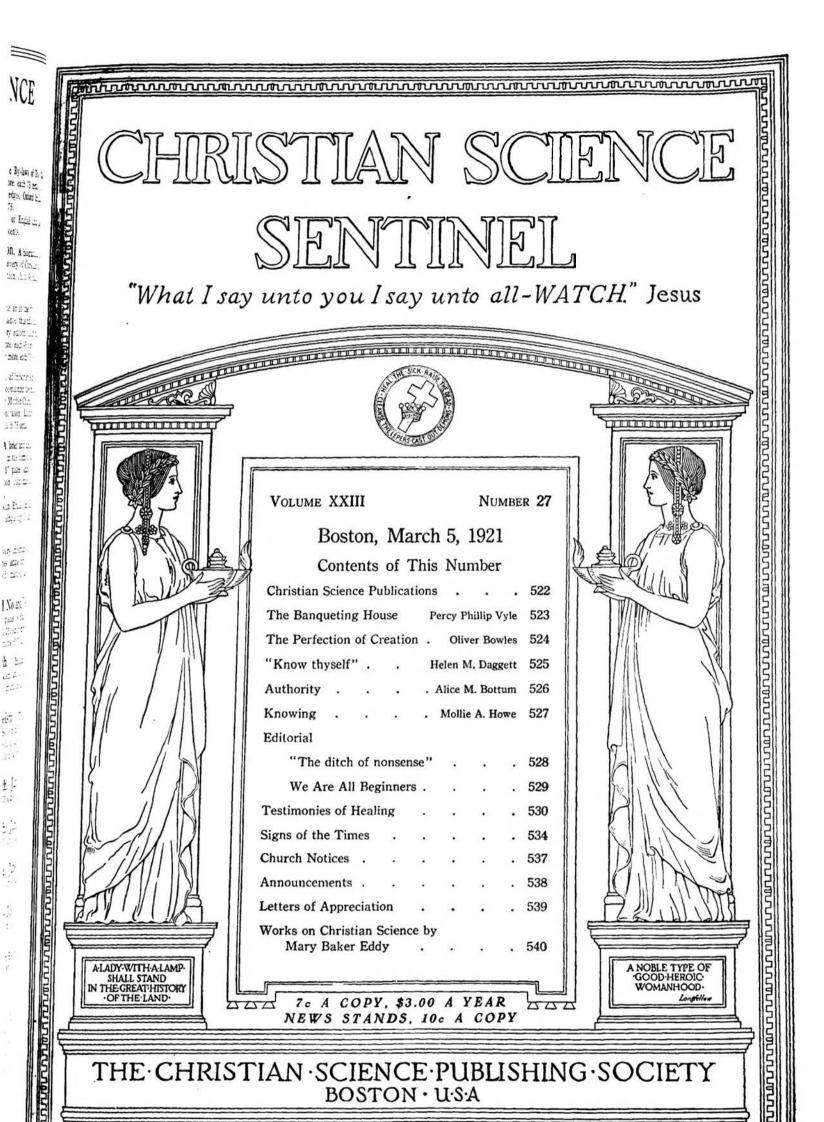

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, BOSTON 17, U.S.A.

NUMBER 27

The Banqueting House

PLENTEOUSNESS is a divine idea. Bounty is infinite. Continuous refreshment in the banqueting house of Spirit cannot diminish supply nor deprive another of anything. The multiplication of Mind's ideas is perpetually operating without fluctuation or deviation, without depletion of quantity and without variation in quality. Mortal sense is always face to face with lack in various phases. The seeking for material plenty is one of the most profound, yet unsatisfactory problems to which mankind applies itself. The urge to secure is coupled with the fear of dispossession. These twain are concomitant with the mortal thinking of all peoples and of all generations, but it is a travesty on the reality that whenever we enjoy the use of anything, this enjoyment is accompanied by the fear that an evil force will arise to snatch it from our grasp.

Christian Science maintains that infinity cannot be finite. that depletion is not a law, and that the spiritual man, the real man, does not lack. On the contrary, Christian Science demonstrates that multiplication and not subtraction is everywhere evident when physical reasoning is discarded. Biblical history is replete with confirmatory evidence of the truth of scientific reasoning. All will remember the narrative of manna in the wilderness and of water from the rock. When Elijah was commanded to dwell with the widow of Zarephath, the meal did not diminish, neither did the cruse of oil fail. The fourth chapter of II Kings bears further testimony to the multiplying of oil, in this case to enable a woman to pay her creditors, and of the feeding of one hundred men by Elisha with twenty loaves of barley and full ears of corn. "And he [Elisha] said, Give unto the people, that they may eat. And his servitor said, What, should I set this before an hundred men? He said again, Give the people, that they may eat: for thus saith the Lord, They shall eat, and shall leave thereof. So he set it before them, and they did eat, and left thereof, according to the word of the Lord."

The inviolability as well as the availability of the law of abundance is many times reiterated in the records of the activities of Christ Jesus. Everywhere he went multiplication testified to the plenty in the spiritual banqueting house. On several occasions Jesus lovingly disciplined the apostles for their fear of a bare table, whether of things to eat or of power to heal the sick. Mark relates the feeding of five thousand and how there remained twelve baskets full of the fragments. His eighth chapter speaks of the feeding of another multitude and that "they took up of the broken meat that was left seven baskets." Later, they sailed with but one loaf, and they were disquieted thereat. The positive apprehension of Jesus of the adequate supplies in the banqueting house brought forth the compassionate reproof: "When I brake the five loaves among five thousand, how many baskets full of fragments took ye up? They say unto him, Twelve. And when the seven among four thousand, how

many baskets full of fragments took ye up? And they said, Seven. And he said unto them, How is it that ye do not understand?"

Luke, describing the institution of the holy supper, relates the further questioning of the disciples, and we can well believe it was as compassionate as always. "And he said unto them, When I sent you without purse, and scrip, and shoes, lacked ye any thing? And they said, Nothing." It was by reason of his realization of the instant availability of the infinite source and the abundance of all things needful that Jesus' demonstrations were immediate, for, as Mrs. Eddy states in "Unity of Good" (p. 11), "Jesus required neither cycles of time nor thought in order to mature fitness for perfection and its possibilities."

It is through the medium of the writings of Mary Baker Eddy that we are enabled to get a glimpse of the real significance of the foregoing incidents in their relation to God, man, and the universe. Indeed it may be said that plenty, in the comprehensiveness of its dictionary meaning, is an essential point of Christian Science. Mrs. Eddy is insistent on the fact of the multiplicity of God's ideas, which, being infinite, continually furnish spiritual supplies for the banqueting house. She illuminatingly shows that it is not at all a hit-ormiss of obtaining an invitation to the banqueting house, but of our receptivity to the generous invitation: "Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat; yea, come, buy wine and milk without money and without price." In other words, be receptive to the truth that because of the allness of the creator. who made man in His own image and likeness, there can be, in reality, no place where bounty is not expressed or where plenteousness is not manifest. Christian Science stands firm for the answer to "How many baskets full of fragments took ye up?" and never sanctions the penurious thought as exemplified by the small loaves or a few fish. A banqueting house must signify an amplitude of all things necessary, but it is only as we translate material feasting with its gradual depletion of supplies into spiritual banqueting, a demonstration of the divine consciousness, that we get the outlook Mrs. Eddy has labored to help us attain. The attribute of abundance is not, as already indicated, by human mandate; for the so-called mortal mind cannot conceive of supply without depletion.

Abundance is spiritual and is in itself abundance, the seed within itself, the vitality of which is illustrated in the answer to the query, "How many baskets full of fragments took ye up?" This attribute of divine Mind should not be thought of or considered simply as a manifestation of things to eat. The banqueting house spoken of by Solomon in his Songs has a far more generously appointed table and is more warmly welcoming and satisfying than the narrow restrictions imposed by carnal sense. The bounteousness of Spirit's banqueting house is for all and includes all. It is all-embracing. Its bounty is manifested as improved health, happiness, harmony, love, capacity, intelligence, environment, conditions, and the many other positive qualities which supersede the negative and dis-

cordant, when we put into practice the understanding of spir- made, for, as the Bible declares, without the Logos, the Eon itual law or Word of God 'was not anything made that was made."

There is no question about it; no argument to the contrary. If you are reading the Christian Science Sentinel for the first time, naturally you want proof as to what Christian Science can do for you. First of all, you may want to be convinced that Christian Science is based on the Bible. The final chapter of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, contains one hundred pages appropriately entitled, "Fruitage," and the following quotation is used in introducing the chapter: "Let us get up early to the vineyards: let us see if the vine flourish, whether the tender grape appear, and the pomegranates bud forth." Since the day of the inclusion of these eighty-four testimonies in Science and Health, the overflowing of the banqueting house of divine consciousness has been testified to by millions of people orally or by signed statement. Herein are present-day examples of the availability of abundance in every conceivable phase from situations variously interpreted, but all invariably narrowing to the point of having metaphorically reached the last pinch of meal in the barrel, or the last drop of oil, whether the sentence is pronounced by materia medica regarding the physical structure or by mortal mind economics as to the state of a man's business. Such sentences are of the one evil that dearth is the master of bounty, and are reversed by the understanding that they are not of God, Spirit, Life, Truth, and Love. These demonstrations repeat, in small degree, those of the prophets and of Christ Jesus, and remind us of Mrs. Eddy's words in "Miscellaneous Writings" (p. 113), "We have nothing to fear when Love is at the helm of thought, but everything to enjoy on earth and in heaven." Then can we sing with understanding as did Solomon: "He brought me to the banqueting house, and his banner over me was love."

The Perfection of Creation

OLIVER BOWLES

It is worthy of note that two of the fundamentals of Christian Science are given the distinction in Bible phraseology of appearing as clear statements of fact followed by immediate repetition of the same statements in different words in order that the reader may labor under no misapprehension as to their exact meaning. The first of these statements occurs in Genesis 1:27, "So God created man in his own image." This direct statement permits of no wrong interpretation, and yet to emphasize its importance there occurs in the same sentence the words, "In the image of God created he him." On page 516 of "Science and Health with Key to the Scriptures" Mrs. Eddy points out the significance of the repetition in the passage, in the following words, "To emphasize this momentous thought, it is repeated that God made man in His own image, to reflect the divine Spirit."

The second statement is in John 1:3, "All things were made by him." This brief but sweeping utterance leaves room for no other creator in the universe, but again the inspired writer follows up with a statement conveying the same thought in a different form, "And without him was not any thing made that was made." John is often regarded as the most spiritually minded of the four gospel writers, and this third verse of the first chapter of his book surely is one of the foundation stones on which is based the superstructure of his interpretation of Jesus' life and works. It establishes forever the spiritual nature of the universe, for our Leader in interpreting the passage states (Science and Health, p. 335), "There is nothing in Spirit out of which matter could be

made, for, as the Bible declares, without the Logos, the Æon or Word of God, 'was not anything made that was made.'" Is it not significant that such repetitions for emphasis, which occur infrequently in Scripture in such direct and condensed form, should apply in the one instance to man and in the other to things, and thus include the entire creation?

The statements in these two passages are accepted as true by the great majority of professing Christians; in fact, it is difficult to see how any one can reject them without repudiating the Bible in its entirety. But the interpretation placed on them by orthodox religions is that mortal man with all his weakness, sin, disease, and inharmony, and the material world with its imperfections, decay, and disaster, are products of the divine creator. At this point the logic of orthodoxy fails completely, for the appearance of discord in such a creation is passed over as one of the inscrutable things which a man is not supposed to understand, or even to attempt to explain. Here is where Christian Science, in the clarity of its logic, comes to the rescue. Since the one perfect God made man in His own image, then man must be perfect. The logic is unanswerable, and no other conclusion can be reached without in some way modifying the Scriptural statements, which are unequivocal, and certainly, by virtue of their repetition, make it clear that no modification should be

To those uninstructed in Christian Science, the bare statement that man is perfect seems absurd, and commonly leads to ridicule. How can one visit the hospitals with their crippled and diseased, or the jails with their thieves and assassins, and yet call man perfect? To human logic it is foolishness, but the Bible plainly teaches that "the natural [carnal or mortal] man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." It is divine logic or spiritual discernment as taught in Christian Science that alone can reconcile the seeming incongruity, for it teaches that the man of God's creation is perfect, and that the inharmonies and imperfections pictured by mortal sense are essentially unreal, because they are not God-created. Human logic readily admits that the hideous visions of a nightmare, which seem sufficiently real to strike terror to the sleeper, and the delirium of the drunkard, are unreal, although they present all the evidence of reality to the disordered mind; and why should it seem unreasonable that the mortal or carnal mind, which even in its saner forms Paul has declared to be at enmity with God, should represent but another form of disorder which sees inharmony as a reality whereas it is only an illusion? The clear logic of the Bible leaves no other possible interpretation of inharmony, sin, disease, and death, except that they were never created, and are therefore false beliefs of mortal mind, having no substance or reality.

Though the proof of the perfection of creation is thus established by unassailable logic, any lingering doubt may be dispelled by the proof of demonstration. The mathematician deduces a law of numbers, and then proves to his students the correctness of the law by applying it to problem after problem, and obtaining a proper solution in every case. And so the honest investigator of the perfection of creation may apply the law, established by logic, to any phase of error, with the result that the error diminishes in proportion to his understanding and loyalty to Truth. When Jesus stepped forth from the tomb, did he not prove the unreality of death and his own innate perfection? And when he touched the eyes of the blind man, did he not prove that sight is spiritual and eternal, and that blindness is the illusion of ignorance about God? When the recognition of the real man's perfec-

tion cures disease, it proves the unreality of disease, just as the awakening of the dreamer convinces him of the illusion of his dream; and when all error is thus proved to be mythical, then nothing is left in the realm of reality but that which ance to the is perfect, and the perfection of creation is thereby established. Just as Jesus proved the perfection of creation by his works, so may we find convincing proof in our own experiences, for every spiritual healing of disease, sin, or limitation is a direct proof that man is overcoming the sense of the reality of error.

The proof of the perfection of creation is not therefore to be regarded as merely an academic problem worked out for the satisfaction of the student, like a problem in physics or astronomy. Its practical importance cannot be overestimated, for a clear recognition of the perfection of creation is essential to Christian Science healing. The proper solution of a problem proves the truth of the mathematical law applied, but the problem could never be solved without a knowledge of that mathematical law. And so in Christian Science practice, while a demonstration of healing proves the law of the perfection of creation, no healing work is possible without a clear perception of this fundamental law. Our Leader establishes the fact that an understanding of the perfection of man is essential in healing the sick, for she states (Science and Health, p. 476): "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the

"Know thyself"

HELEN M. DAGGETT

O those who have been studying Christian Science and I endeavoring to live what it teaches, comes a desire to share with others the blessings they have received. Because of this wholesome and right desire Mrs. Eddy provided ample opportunities for its expression, one way being in the Wednesday evening meetings when testimonies of healing are given in Christian Science churches all around the globe. Mrs. Eddy also established The Christian Science Journal and Sentinel, including in them certain pages to be given wholly to the testimonies sent in from grateful students from all parts of the world, so that others could receive in this way the assurance of the healing truth. These testimonies do not bring up mental pictures of dreaded troubles, but they do express the fact that when the writer was suffering he found relief and healing through the application of Christian

When the apostles left Jesus, to do as he bade them, "to preach the kingdom of God, and to heal the sick," they traveled from city to city, country to country, healing and teaching, and returned to give thanks, saying, "Lord, even the devils are subject unto us through thy name." They did not have the medium of the press to assist them at that time, their work being to preach by word of mouth, and then to prove their words by demonstration in healing the sick. Today the Christian Science churches established in so many cities and towns throughout the world are spreading the same teaching, through the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and the testimonies heard in the Wednesday evening meetings bear witness to this healing truth, healings of all manner of diseases. The Christian Science publications were also designed to carry this same message and bear the same testimony of the proof of the ever availability of divine Love. Teaching and healing must al-

ways be side by side, because if the word of God is expressed anywhere in thought, healing must necessarily follow.

Christian Scientists to-day are also called upon to go forth into the highways and byways and "preach the kingdom of God." One way of doing this is to bear testimony to the good they have received through this study. In considering this question, one may be tempted by the fear of not being able to express himself correctly or of being misunderstood because he may fall short of telling what his healing has really meant to him. It may seem difficult to find words adequate enough to cover his need of expression. Then does he realize that it is not words that count but works; for he who has had that wonderful uplift in thought after a demonstration of the allness of God begins to appreciate in a measure what the ever presence of Spirit really means. The fact comes home to him that the only reality anywhere is the power of Spirit, Principle, while all other arguments of seeming power are arguments and nothing more.

In Science and Health on page 571 we read, "Know thyself, and God will supply the wisdom and the occasion for a victory over evil." There is a wonderful realization of the ever presence of God when one truly does "know" himself. That means the knowing and the understanding of the inseparability of God and man. Truly to know one's self is to have the presence of Mind always at hand, always the guiding power in any transaction, any seeming trial, and in any pleasure. There is then no time given to wondering or doubt as to what is leading or prompting one to act, but the steady sureness of the omnipresent intelligence directing all to the glory of God.

There follows the assurance of the fact that whatever may be the appearance to the senses, the truth about one's self and his expression is that man is the child of God, and expresses only what Mind directs, and nothing more. There may be times when this expression seems to be the two-edged sword, or the overturning of the tables of the money changers, but when it is realized that it is not persons who are wielding this power, but Truth, there will follow the blessings.

Mrs. Eddy writes in "No and Yes" (p. 35): "When human struggles cease, and mortals yield lovingly to the purpose of divine Love, there will be no more sickness, sorrow, sin, and death." It behooves us all to ponder carefully and prayerfully this "purpose of divine Love." What can it mean other than the expression wholly and completely of Spirit, and not matter. As we understand and "know" man's true self we are appreciating in that degree the purpose of divine Love. In that proportion do we see the lessening of our experiences of the beliefs in sin, sorrow, and sickness. There can be no hesitancy, then, in expressing what this means to us, in telling others what our experiences have brought forth.

Webster gives a definition of purpose as "the object, effect, or result arrived at, intended, or attained." The object or result arrived at by divine Mind is the expression of itself, because, of course, Truth knows only truth and the only unfoldment of right thinking or right activity must be the operation of Truth. The only intention of good is to be good, of Love is to be loving, or of Mind is to be intelligent. At times erring human sense may try to say that the experiences that apparently seem to be necessary for man to go through are anything but loving, inasmuch as one may be called upon to do those things which appear the very farthest from his capabilities. The only doubt as to man's ability to perform anything comes from the testimony of mortal mind, which is only the supposititious counterfeit of divine Mind.

PF 31

Divine Mind already knows all, and man is the reflection of this Mind; therefore he can do only that which Mind has already intended, which Mind has, in reality, already done.

Let us have more faith that whatever may be our duty to do it is for the glory of God. Let us know ourselves so completely and constantly to be always one with God that there can never for an instant be a thought entertained of anything having place or power other than divine Love. Then shall we be ready to see and understand the "purpose of divine Love," and shall know ourselves as one with this purpose, and in fact, as part of it. True strength comes with this clear vision, and the ability to do every necessary thing is found to be ever present, because Love is ever present. Man reflects infinite capability, because he reflects God, and each one can fearlessly go forth proving under every circumstance his divine inheritance as the child of God. He can then look forward to every seeming condition as an opportunity to prove the ever presence of Mind, and in this way will he be learning also to "know" himself.

For man to know himself is to prove that there can never be a step to be taken where God has not been before him, and then will it be found too that he will be returning even as the disciples of Jesus telling of victories over all manner of discord and diseases. In Science and Health, on page 393, Mrs. Eddy gives us this command: "Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man."

Authority

ALICE M. BOTTUM

A SUPERFICIAL glance at the affairs of the world to-day might cause many people who are not accustomed to looking below the material surface of things to exclaim that indeed the times are out of joint. Wars and all the attendant evils left in the track of war, business depression, political uncertainty, graft and corruption in public life, intrigue within intrigue in high places give rise to the feeling that the old days of ease and certainty are over, that the old anchors no longer grapple and hold, that the former stability and clean-cut distinctions are no more. Men seem to hesitate and waver now about decisions over which there once was no question; they look for assurance to former standards and find a mist. The feeling sometimes comes that they are just standing, marking time, and waiting for the appearance of some authority by which they may be guided.

It has been shown clearly by many recent events that the meaning of the word "authority" is not so clear as is commonly supposed. It is derived from the Latin word auctoritas, of which the root auctor, when translated into English, means "creator." The dictionary defines authority as "that which is or may be appealed to in support of action." This definition is an exact covering of every case in which an individual may wish to invoke authority. Incidentally, it may here be remarked that since a word is the symbol of thought, the grasping of the meaning often clears up situations that have seemed hazy.

Matthew, writing of the Sermon on the Mount, uses this word. He says of Jesus that "he taught them as one having authority, and not as the scribes." Now this is rather an extraordinary statement. Without analysis the inference seems to be that the teachings of the scribes were not to be regarded as having much value. But Matthew was a Jew and was familiar with the high respect in which the scribes were held by his people. These learned men were not only writers and custodians of the national records, but were teachers and in-

terpreters of the Mosaic and traditional law. In fact, their position in one way was analogous to that of a justice of the supreme court. He does not make the law, but he does interpret it and he gives decisions on certain points out of the vast agglomeration of statute and common law. This was the position of the scribes. They knew the Jewish law and tradition, and their interpretations were valued as the decisions of men learned and just, who out of their large experience and seasoned judgment gave the truth as they saw it.

Therefore what did Matthew mean when he practically stated that these scribes, esteemed though they were, had no authority, in the face of the apparently overwhelming evidence to the contrary? He was speaking through his own deeper understanding of what constitutes authority. He knew that the store of knowledge of the scribes, although vast, was only the knowledge of material history and law, but that the lessons taught by Jesus to the people gathered about him on that hillside were absolute truth, because they were spiritual. No tinge of materiality entered into them. His authority was indeed absolute, in the absolute meaning of the Latin word auctor, "creator." He knew God was the great First Cause, the only creator, and he knew it better than any man before or since. Therefore when he spoke of the things of God he spoke "as one having authority."

This authority of Jesus was remarked several times in the writings of the apostles, and in every case it is spiritual authority that is made the subject of comment. Luke says that after Jesus, in the synagogue, healed the man of dementia, those who witnessed it "were all amazed, and spake among themselves, saying, What a word is this! for with authority and power he commandeth the unclean spirits, and they come out." No wonder the people were amazed. They were familiar with the authority of the legions of Tiberius, but an authority which could heal one of their own townsmen of a disease that they had all witnessed, this was real authority!

Another time Luke tells that "he called his twelve disciples together, and gave them power and authority over all devils, and to cure diseases." Now this was no mystic transfer of some supernatural power. Jesus always showed that he was a practical man. He did give his disciples something when he gave them this power and authority. And what he gave them was the knowledge of the authority by which they too could cast out devils and heal diseases. That this knowledge was not intended for a chosen few but for all men who would take advantage of it is clearly proved by history. For some time men and women performed what the grosser minded people of the Græco-Latin world of that time regarded as "miracles," but were really demonstrations of the utter futility of evil and the powerlessness of matter. It was not until the apostolic church developed into a hierarchy which shortly became an autocratic dictatorship, suppressing all individual thinking, that the healing power disappeared and was lost until the last century. But to-day, through the teachings of Christian Science as given to us by Mary Baker Eddy, we have this authority with us. And it follows the meaning quoted before: "That which is or may be appealed to in support of action." As Christian Scientists, then, we know there is only One to whom we can appeal in support of action: to God, Mind.

Is it a question of physical healing? Our authority there is not the medicine chest, air, exercise, manipulations, but our certain knowledge that God, being perfect, is not the author (auctor) of sickness, therefore it has no real existence and of course we cannot suffer from anything that does not exist. The minute we know this with absolute conviction, we

Knowing this to be impossible our demonstration is made. There is no circumstance, no matter how seemingly inharmonious, no discord so grave that it cannot be met and conquered if the right authority is invoked. But so long as we look to material remedies or wealth or fame or personal opinion or groups of individuals for help or guidance, we

are healed. If we are confronted with a sense of lack,

whether of money, happiness, success, loved ones, our au-

thority again is divine Mind, and we know that we inherit all

good and, in the very nature of things, cannot be deprived for

one instant of anything that is in any way necessary to us, be-

cause if we doubted this it would include the corollary

suggestion that in that instance God is not all-powerful.

may be sure we are not looking to the right authority. In the last analysis, there is only one authority and that is God, Mind, and the minute we look elsewhere for assistance in solving our problems, instead of demonstrating what we know of Truth, at once we are breaking the First Commandment. When we cease being fearful or self-righteous and stop personalizing evil and simply let divine Mind govern us

as our only authority, the healing truth will be perceived and we shall behold as the true selfhood the "new man" made in the image and likeness of God.

Knowing

MOLLIE A. HOWE

To the sincere student of Christian believe, or through frequently arises, either in his own experience, or through that of others: How am I to know which of two or more ways, each perhaps seeming to be good, is the right way, hence God's way, to pursue? One of the first requisites in solving any problem is to realize that omniscient Mind declares itself and affirms, "I know." It would be impossible from its very nature ever to say, "I do not know," nor could it express itself in any sense of doubt or uncertainty whatsoever. Hence to assert "I know" and then to proceed on that basis, meeting every suggestion of doubt and fear with a clear acknowledgment of God's allness, is to prove that there can be but one right activity for every step in human experience, and that just in proportion as we keep before us the spirit of Mrs. Eddy's words (Poems, p. 14):-

Shepherd, show me how to go O'er the hillside steep, How to gather, how to sow,-How to feed Thy sheep; I will listen for Thy voice, Lest my footsteps stray; I will follow and rejoice All the rugged way,

just in this proportion will the sense of doubt and indecision give place to certainty and decision, a conscious realization of the right step be made clear, and a joyous sense of fellowship with God be realized.

Among many experiences as proofs of the foregoing, I would like to relate one. While visiting a large city in the eastern part of the United States, I encountered a familiar face in a crowded street car one Wednesday evening when I was returning from a testimony meeting, but as many years had elapsed since I had last seen this friend, her name and identity were not at once recalled, and in the few minutes required in working this out my destination was reached and the opportunity of meeting her seemed gone. On my leaving the car, suggestions of regret and keen disappointment, coupled with self-condemnation for not at least having spoken to this old-time friend, came flooding in, and with them the reminder that as she was a resident of a far distant state, with changed

name and address from that I had previously known, the possibility of again seeing or knowing anything of her was, humanly speaking, indeed small. Then came the opportunity of replacing all these suggestions calling themselves impossibilities with the assurance that if it was right for us to meet, God made it right, and whatever was right was certainly possible, that the fact of our being in a city of some three million inhabitants could not in any way hinder the right way or obscure it.

The following day, while walking down a crowded street in an entirely different section of the city from that in which we had been on the car the night before, we met face to face, each expressing gratitude at the renewed opportunity of meeting. One of us felt that there must be something other than the ordinary sense of human friendship to have brought about this reunion in such an unusual fashion, after so many years of separation, and a question was asked which immediately brought to light the fact that both of us since we had last met had become students of Christian Science. There was deep gratitude that a measure of the truth that "I know" had replaced the "I do not know," for had this suggestion of "impossible" been listened to, it goes without saying, the result would have been accordingly.

Each problem solved in mathematics is a proof of the availability of the rule of mathematics, while a failure in the solution of a problem simply points to the fact of failure in availing one's self of the privilege of using the truth in mathematics. So there is no ground whatsoever for discouragement, but there is constant incentive to greater effort in mastering the science of numbers, in other words to mathematical knowing. The tendency of the human thought, however, too often is to turn to and acknowledge Principle in what seem to be the things of some moment; whereas in the matters of minor details one is inclined to be careless in his thinking, allowing free rein to the suggestion that would argue, It is hardly worth while to give metaphysical thought to this,-little realizing that one cannot afford to allow one suggestion to pass unheeded or to go unchallenged, any more than he could allow a single incorrect figure, however small,

to enter his mathematical problem. In Proverbs we read, "In all thy ways acknowledge him, and he shall direct thy paths." Paul recognized this necessity when in his second epistle to the Corinthians he wrote, "Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ," while Mrs. Eddy throughout her writings as well as in her example reminds us of the necessity for constantly being on guard, in other words, for continuously recognizing God and His idea as being all there really is, and consequently rejecting as nothingness any suggestion to the contrary, however apparently insignificant.

"If in one instance," Mrs. Eddy tells us in that wonderful chapter entitled "Obedience" in "Miscellaneous Writings" (p. 116), "obedience be lacking, you lose the scientific rule and its reward: namely, to be made 'ruler over many things," and this very alertness, this being consistent in the minutiæ of daily living, is after all the test of the real Christian Scientist, fitting him for the greater problems as no other method of procedure could.

"The ditch of nonsense"

It was once said of "the preacher" that he was the only wise man known to the world, and that his wisdom amounted to a confession of supreme ignorance. As a matter of fact that is scarcely a fair way of putting it. The preacher did emphatically rate all merely human knowledge and all purely material effort as vanity, but he did not regard this as everything or even as the main thing. Vanity, it must be remembered, meant to the preacher, not strutting in the sun, like a peacock, but just nothingness. The "lying vanities," then, of the Psalmist were the empty falsehoods of human existence, not the eternal truths of spiritual life. "Let us hear the conclusion of the whole matter," the preacher winds up the most terrible and sustained of all the many indictments of the material counterfeit of reality: "Fear God, and keep his commandments: for this is the whole duty of man. For God shall bring every work into judgment, with every secret thing, whether it be good, or whether it be evil." That. truly, is the conclusion of the whole matter. Truth and error, good and evil, shall be tested on the touchstone of Principle, God, and the error and the evil will be proved to be vanities, unrealities, whilst the truth and the good will be found indestructible.

This being so, it is evident that the world's one wise man, as Congreve is pleased to call him, would have settled matters, so far as that famous dramatist was concerned, by ruling him and all his works amongst the vanities. But this world, from a metaphysical point of view, is made up generally of big and little Congreves, with the result that only the dissenters from the Congrevian platitudes of material reality could hope to be regarded seriously in Jerusalem. To put it a little differently, when Mrs. Eddy wrote in "The First Church of Christ, Scientist, and Miscellany" (p. 242), "Christian Science is absolute; it is neither behind the point of perfection nor advancing towards it; it is at this point and must be practised therefrom," she put herself definitely on the side of the preacher, and swept all the vanities into "the ditch of nonsense." The dealers in vanities may plead to be allowed to indulge in the process of make-believe a little while longer: they are like the demoniacs amongst the tombs. Sooner or later they will be compelled to abandon the vanities, and meet the realities face to face. Mrs. Eddy emphatically gives no encouragement to the dawdlers. Of the successful, she says, on page 230 of "Miscellaneous Writings," "They spend no time in sheer idleness, in talking when they have nothing to say, in building aircastles or floating off on the wings of sense: all of which drop human life into the ditch of nonsense, and worse than waste its

Imagine a world in which nobody talked unless he had something which it was necessary or desirable to say; a world in which scandal, gossip, and slander died for want of an audience; a world in which when two or three were gathered to-

gether the time was spent in profitable and necessary discussion; a world in which, when men were alone, they thought not of themselves but of Principle, and made plans for the good of humanity instead of dreaming dreams of their own future success, power, and glorification. And men will do this in the proportion in which they come to know God. Principle, aright,—to understand divine metaphysics, and to demonstrate the truth of Christian Science. When, in the School for Scandal, Sir Peter Teazle, called away from Lady Sneerwell's party, excuses himself, dryly, to his hostess, by remarking that, though compelled to remove his body, he leaves his character behind him, the audience invariably explodes in laughter. Yet the satire is so fiercely deserved that the audience should recognize that the Sneerwells and the Candours, the Backbites and the Crabtrees, in dropping life into the ditch of nonsense, were themselves surrendering to all those suggestions of evil which make those guilty of the surrender servants to him they would obey.

Christ Jesus once said that men should give account in the judgment for every idle word they spoke. How much more then will they be held responsible for their malicious, slanderous, and lying utterances. The judgment of sin by Principle is an unending process. As men talk, or act, or think, their thoughts, acts, and words are tested on the touchstone of Truth. As a result, either they are stamped with the hall-mark of Truth, or dropped into the ditch of nonsense. There are tragedies enough, however, even if the chorus be the laughter of fools, to be found in that ditch. For remember that nonsense is vanity, that is nothingness, and of it Mrs. Eddy, defining her own words, has written, on pages 489-490 of Science and Health: "A wrong sense of God, man, and creation is non-sense, want of sense. Mortal belief would have the material senses sometimes good and sometimes bad. It assures mortals that there is real pleasure in sin; but the grand truths of Christian Science dispute this error."

It was this error which Christ Jesus fought against, in the mouths of the scribes and Pharisees, throughout his ministry. You find it recorded, in its most cruel and vicious degree, in that single saying of Caiaphas, which exposes the whole policy and philosophy of the high priest, and reveals his nature in one master stroke of character drawing. "Ye know nothing at all, nor consider that it is expedient for us. that one man should die for the people, and that the whole nation perish not." Caiaphas was the expression of sacerdotal autocracy. He wished to get rid of Jesus, with his uncomfortable insistence on Principle, from out of his path. He appealed, therefore, to the fears and selfishness of the hierarchy to take advantage of the ignorance and materiality of the common people, open to every lie of suggestion, to glut their hatred of Truth. Caiaphas was, of course, talking nonsense, and nonsense which, if it had not been the intention of Jesus to prove the indestructibility of life upon the cross, would have recoiled upon him sooner instead of later. As it was, Caiaphas seemed for the moment to be victorious. As if nonsense ever could prevail against Principle.

What prevailed, of course, was Love. Not the nonsensical, sensuous passion of this world which at its best fears for its object, and at its worst unites individuals in hatred of their neighbors, but the love which is of God, who is Himself Love, and which is reflected wherever real love shines in this world. Neither evil nor matter has any connection with Love, for God, Love, is Spirit, Principle. The work of the Christian Scientist is to learn more every day of Principle. The road of this learning is narrow, and the ditches of nonsense lie along its edges. In following it there is just one

With that the seeker is safe.

"Your dreamers may dream it The shadow of a dream. Your sages may deem it A bubble on the stream. Vet our kingdom draweth nigher With each dawn and every day Through the earthquake and the fire Love will find out the way.'

Pilate demanded. What was truth? and did not stay for an answer. To-day the world asks, What is love? and does not heed the reply. FREDERICK DIXON.

We Are All Beginners

In one sense, no one has yet done more than begin to un-भारतीत दा derstand and demonstrate Christian Science. Infinite Principle actually is infinite, and expresses itself without limit. Therefore the true discernment and proof of Principle must be the work of eternity and not merely of any limited period of time. The moment a man congratulates himself complacently on his own superior understanding of Christian Science, that moment is he standing still, satisfied with the mists of mortal belief. Human self-satisfaction is altogether a delusion, for the only true sufficiency is of God, as Paul says, and is experienced just in proportion as the mortal illusion of selfhood vanishes in the presence of the one I AM, spiritually reflected by the veritable man whose whole existence is quite apart from suppositional mortality. On page 3 of Science and Health, Mrs. Eddy points out that "the Divine Being must be reflected by man,-else man is not the image and likeness of the patient, tender, and true, the One 'altogether lovely;' but to understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire."

When a man feels over and over again "the times of refreshing" which "come from the presence of the Lord," he is bound to realize something of what it means to be continually an enthusiastic beginner in the understanding and practice of Principle. The unceasing freshness of right desire is. of course, what must turn one to the true fulfillment as eternally now. The accomplished fact which God knows is always the spiritual idea, which is the reality of man, and never any mortal sense of things. Immortal activity is the divine creation that is finished, though it ceaselessly unfolds because of its unlimited nature and source. Every student of Christian Science, whether he considers that he has been studying for a long or a short time, is simply beginning to comprehend the essence of this true creation. His experience is improved by this comprehension inasmuch as the limitations of supposed mortality give way to it.

The belief in mortal mind and in all mortality is always unsatisfactory. Becoming dissatisfied with mortal mind, a man must sooner or later turn away from its futility. All there is to turn to, then, is divine Principle as revealed through Christian Science. As this turning in the right direction goes on, the nothingness of mortal mind and its beliefs is demonstrated, while the allness of the divine Mind and its idea is proved to be the reality of existence. Mrs. Eddy says, on page 252 of Science and Health, "When false human beliefs learn even a little of their own falsity, they begin to disappear." Each one relying on Principle can rejoice in this beginning, for it indicates that he is indeed proving something of the goodness of good as truly invigorating, through replacing suppositional infirmities of body or of human motives with the strength of divine intelligence. This

compass to steer by, an understanding of Principle, Love. is the refreshing which continuously comes from the omnipresence of divine Love.

In the course of the turning to the divine Mind as the remedy for all human errors, there may seem to be stumblings, mistakes, and retraced steps. Any sense of difficulty in beginning or achievement arises, however, from the reluctance of mortal mind to yield to the truth, not from any obscurity in the truth itself. The divine Mind, with all that it includes, is unclouded. Joyous understanding of God, divine Mind, is the function of the real man. This must be proved by each one who turns to Christian Science for any sort of healing. "Precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little." Even a seeming mistake is corrected by more consecrated consideration of Principle's precepts. Relief from sin or suffering is instantaneous, once a man fully relies on the divine consciousness, and not mortal mind, for good. "This," as Isaiah tells us, "is the refreshing."

If a man thinks that, as a mortal, he has attained perfection, he needs to learn anew with humility that perfection is divine and immortal, not human. Daily and hourly he needs to turn to Truth afresh, and rejoice in being born again, in becoming as a little child, in order to prove the inexhaustible possibilities of the divine Mind. The genuine "I," the infinite I AM, with its manifestation, is perfect, of course, now and eternally. This is the only "I" there really is, and the acceptance of this one true selfhood annihilates the imperfection, the self-justification, and the self-condemnation of suppositional human living. Thus mortality, with all its belief of either human perfection or imperfection, is "swallowed up of life."

Immortal man, in the image and likeness of God, has neither beginning nor ending but coexists with Principle. To say that "we are all beginners" must refer, therefore, to mere mortals. Mortals, moreover, are beginning to improve their conditions just in proportion as they are dropping the belief of mortality in the presence of the immortal reality. Christian Science begins to improve each one's experience at exactly the point from which one begins to turn sincerely to Christian Science. That point may seem to be different for each one of us. As one goes on, the reasons for rejoicing are, first, that the true creator and the true creation are found to be perfect and harmonious now and always, and, second, that because of the understanding of this spiritual fact, seeming mortal experience is being improved through the reduction to nothingness of its worst phases. No matter how little progress a man may have seemed to make so far, he is not to be condemned but encouraged, for no one knows from what depths of evil and wretchedness he may have originally turned to the truth.

Each one, then, must begin with what is clear to him, and proceed courageously and persistently with the firm knowing that the divine Mind and its spiritual idea, which is the real man, are wholly harmonious. This is the beginning that takes one ever through the straight and narrow way of joy. To the "Students in the Board of Education, December, 1904," those who, after careful study and instruction, were to go forth as teachers and practitioners of Christian Science, Mrs. Eddy wrote a few sentences which should make us all glad to continue, as beginners, the demonstration of infinite Principle. These sentences appear on pages 253 and 254 of "The First Church of Christ, Scientist, and Miscellany": "We understand best that which begins in ourselves and by education brightens into birth. Dare to be faithful to God and man. Let the creature become one with his creator, and mysticism departs, heaven opens, right reigns, and you have begun to be a Christian Scientist." GUSTAVUS S. PAINE.

Testimonies of Healing

I am unspeakably grateful for the many blessings received through the study of Christian Science. It would be difficult to tell of all the benefits I have received, but I feel it right to give my testimony, hoping it may help some one.

I was wounded in France in 1915, when I received a bad puncture in the carotid artery. After a time I was moved to England, a surgical operation was performed, and the artery was tied, greatly retarding circulation on one side of the head. I drifted from one hospital to another, feeling very weak and wondering how I should get a living when I was released from the army. The doctors did not give me much encouragement, but told me I would have to be careful, and not undergo either mental or physical strain. In 1916 I was discharged as "totally disabled." Then followed a long period of sore trial: I was seldom free from headache; I tried to study shorthand and bookkeeping, but had to give it up and go away for a rest.

I finally decided to go on a farm and try to get better in this way. The farmer whom I went to was a Christian Scientist and I quickly learned to love the beautiful truth I read in his copy of Science and Health. The headaches left me and very soon I was working as hard as any one. I was healed of the desire for smoking during the first few months, and one by one erroneous conditions have been overcome. I now rejoice in perfect health and I have never been happier. Through Christian Science I found my present work, and day by day I am realizing more and more that good, God, is real, and error unreal. I have experienced great protection during the whole time I have been studying Christian Science and I am most grateful for the unselfish life of our beloved Leader, Mary Baker Eddy.

LANCELOT GEORGE WHITEHEAD, Canterbury, England.

After suffering for several years from neuritis, for which

doctors and specialists had said there was no cure, I was healed by reading the first chapter in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have had two wonderful experiences of protection and was healed of measles in one treatment, also of a pain in my left side, which I had had for many years, and of many other ailments. I am grateful for the reading rooms, lectures, and all the literature, also for the joy one receives in helping others. I am indeed grateful to God, and also to Mrs. Eddy for showing us the way.—(Miss) Pearl Geneva Snyder, Los Angeles, California.

I wish to try to express some of the gratitude I feel for Christian Science. Isaiah says, "I will mention the lovingkindnesses of the Lord." I feel that words are inadequate more than to mention the loving-kindness I have received since taking up the study of Christian Science. I have been healed of periodic neuralgia of the head and stomach of years' standing, and many minor ills. I was instantly healed of the lifelong habit of biting my nails, and in two treatments from a Christian Science practitioner a broken rib was healed.

As nearly every one writes of the healing power of Christian Science, I wish to tell of its protective power. Several years ago when I was a very young student of Christian Science and my husband had not taken up the study, our large grain elevator needed a new roof. A workman was employed and by night-time had finished one side of the roof. In the morning it was snowing and the wind was blowing so hard that he could not continue the work, and it looked as if

much of the grain would be ruined. I knew that there is nothing impossible with God and I read and reread the ninety-first psalm many times, especially the fifteenth verse. "He shall call upon me, and I will answer him: I will be with him in trouble; I will deliver him, and honour him." About half past three in the afternoon I looked out. The wind had gone down and there was a man on the roof sweeping of what little snow was on it. By night the bins were sufficiently covered so that not a grain of corn was injured, although the roof was not finished for some time.

Around our home we have a variety of fruit trees, among them several plum trees. We also have a garden. Five years ago my attention was called to the fact that the bugs were destroying the potato vines. I went to the garden and the condition of the vines was truly discouraging. While I was standing there, the thought came to me that God gave man dominion over all the earth and that I was not proving my dominion when an insect was destroying what I was trying to raise for the use of my family. In a few days I went back to the patch, and where there had been legions of insects, there was hardly one in sight. The plum trees had been infested with a small insect, and had not borne fruit for years. When I saw what Christian Science had done for the potatoes, I tried the same treatment for the plum trees. This year I had plums to give away. And although a neighbor across a sixteen-foot alley spends hours every day destroying the insects in her potato patch, my plants are free.

For years before I took up the study of Christian Science, I was very much prejudiced against Mrs. Eddy; now when I think of what she has done for all mankind, I feel like putting my fingers on my lips and bowing my head. I am truly grateful for the wonderful change Christian Science has made in my thought and in my disposition. I am grateful for the testimonies; there is always something comforting in them. I am especially thankful for one that made mention of the one hundred and twenty-first psalm, which has since been a daily comfort to me. My great desire is to live Christian Science.—(Mrs.) KATE HAWTHORNE, La Place, Illinois.

It gives me great pleasure to be able to express my gratitude for the many blessings which Christian Science has brought to me. I prayed to God in my hour of need and Christian Science came in answer to my prayer, bringing relief from sickness, and in addition a wonderful sense of peace. At the time I sought relief through its teachings I was suffering from a severe nervous trouble which materia medica had failed to cure. After I learned a little of the truth about God, my physical healing was instantaneous, but the mental healing came more slowly, and only as I learned more of the allness of God. After four years of earnest study and obedience to Principle, and with loving counsel from a kind practitioner, I am happy to say as did the psalmist, "0 Lord my God, I cried unto thee, and thou hast healed me.'

Two children have come into our home since I have been a student of Christian Science and both experiences were beautiful proofs of God's loving care. The children are intelligent beyond their years and are very receptive to the truth, in fact so much so that they have been free from the usual children's ailments. For all of these blessings I am very grateful, but transcending these is the spiritual awakening, without which we progress but slowly. There have been seemingly many dark hours, but the truth has always brought the light when sincerely sought. I would say to those whose blessings seem to be deferred, Remain steadfast and God will surely reward you.

healing power of Christian Science. I turned to Christian Science when I was in need of physical healing and this was received in six weeks through the reading of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I had been ill, with

telephone; the next morning the ehild went with me to Sun-

day school, the swelling and discoloration having all disap-

peared, and the scars were healing over. Monday morning

she was happy as usual, and out at play. She often played

around where the dog was, and has not shown the least fear

of him or of any other dog since. Two long scars remained

on her cheek for a year or more, but they, too, have en-

Science protects as well as heals. One morning when our son

was quite small he came home from school about the middle

of the forenoon, saying he was very sick. I told him to go

and lie down and I would come in and help him. I took my

Bible and "Science and Health with Key to the Scriptures"

by Mary Baker Eddy with me. I never knew what the dif-

ficulty was, but the suggestion that kept coming was of in-

fantile paralysis, so I treated him as we are taught to do in

Science and Health, and read half of the week's Lesson to

him. It then being about noon, I prepared lunch; he got up,

ate it, and went back to school at one o'clock well. I am in-

deed grateful for the pure thought of Mary Baker Eddy,

for all her writings, for the periodicals which she established,

I am most grateful for a wonderful healing I had of an in-

growing toenail, something over two years ago, through the

study of Christian Science. Although this healing was a

very slow one, I am nevertheless very grateful. I wish to

mention that until within about three months of the healing

I had a sense of fear about colored stockings and kept a piece

of cotton on the toe, but not until I stopped using the cot-

ton was I completely healed. Mrs. Eddy writes on page x

of the Preface to Science and Health: "The divine Principle

of healing is proved in the personal experience of any sincere

seeker of Truth. Its purpose is good, and its practice is

safer and more potent than that of any other sanitary

with me, and to Mrs. Eddy who brought this wonderful truth

I am grateful to the practitioner, who was very patient

It is with much gratitude that I give my testimony of the

the fulfillment of the promise given in the third chapter of Malachi, tenth verse: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

I am grateful for *The Christian Science Monitor*, also for the other periodicals that Mrs. Eddy founded and established and gave to the world, to help and to bless all who wish to avail themselves of the opportunities which this literature offers. I am not only grateful for the spiritual help that I have gained from reading the Christian Science literature but for the education that these periodicals, and especially *The Christian Science Monitor*, have afforded me.

I am truly grateful for all the good that I have received and am receiving, and I give my testimony for the glory of God and in gratitude for the benefits gained from Christian Science.—(Mrs.) FOLLETTE BROTHERTON, San Francisco, California.

In the fall of 1914 I was instantaneously healed of gallstones through the help of a Christian Science practitioner. This healing ended a period of twenty-five years of suffering and semi-invalidism. My wife telephoned for help, and the practitioner, to whom I had often scoffed at Christian Science, made this reply: "If your husband wants help he must come to the telephone himself and ask for it." I did so, although in the extremity of pain, and in ten minutes was sleeping as peacefully as I ever did in my life.

This experience wrought a transformation. I was changed. That trip to the telephone was made "the road to Damascus," and, like Paul, I saw "a great light." Those reading this who have had a similar experience will appreciate the avidity with which I read the Bible and Science and Health; how the upper altitudes alone were high enough for me, but a testing time inevitably came and I had to prove my understanding of the truth, but I know that my feet are now planted on solid ground, and that I am making progress.

My family and I have profited greatly through reading the literature of Christian Science. We are readers, and of necessity reading is our chief means of recreation. We find that the reading of the Bible, of Mrs. Eddy's writings, and of the Christian Science literature, is always followed by a sense of spiritual gain. Since the first of January of last year I have been healed of complications so grave to mortal estimate that materia medica allows of no recovery,—but God, who is my Life, healed me through His word. In many other instances I and members of my family have been confronted by ills that, to mortal sense, seemed insurmountable, but which when confronted by the truth were proved to be nothing. We have learned that God is good; that God and His idea is all there is, and that man has nothing to fear.—Ernest L. Bailey, Medina, New York.

In gratitude to God for His loving-kindness to all mankind, and because of the help and encouragement I have received from the testimonies in the Journal and Sentinel, I wish to add mine, hoping it may do as much for some one else who is reaching out for help and healing as those of others have done for me. From early girlhood I had been a member of a denominational church and was trying to know the way as taught in the Bible. Many passages in the Bible were very precious to me, but with that exception it was a sealed book. The many things I could not understand were put aside, with the thought that they were mysteries,

known only to God. A great sorrow came to me that utterly swept away my faith in a manlike God and a far-away place called heaven. Somehow I knew there was a God, "if haply they [I] might feel after him, and find him, though he be not far from every one of us: for in him we live, and move, and have our being." When in an effort to comfort me the ministers told me this sorrow was God's will, and that He would give me strength to bear it, I would shake my head and say, "God does not know it," and I began my search for a right understanding of God and heaven.

In the summer of 1906 I visited a certain large city. I told the friend who went with me that I was going to investigate Christian Science. The first Sunday I went to a Christian Science church, and after the service a copy of the Scatinel was handed to me. After reading the first article I knew I had found what I was seeking for, because it told of God as divine Love. I have been a constant reader of the Sentinel ever since, but it was about two years before I was willing to leave the old for the new. After purchasing "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and reading it daily, and having learned in some measure to know God as Life, Truth, and Love, ever present and all-powerful, every physical ill was destroyed, from some of which I never expected to be free, as they were accounted incurable. I did not know just when I was healed, but I do know that it was the understanding of God, as taught in Christian Science, that healed me of sin, sorrow, and sickness. I had found the pearl of great price.

For several years I had not been able to pray the Lord's Prayer and say, "Thy will be done in earth, as it is in heaven," but after learning in Christian Science that God's will is good, "Thy will be done in earth, as it is in heaven" with its spiritual interpretation: "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17), has been my daily prayer. I so clearly realized the truth contained in that passage that cancer of the liver in its last stages was instantaneously healed.

In my search I read everything I could find pertaining to immortality, and held to the affirmative truth. "The Lord is my shepherd; I shall not want," was my daily prayer, although I did not then know that it was prayer. As I look back I know that I was being divinely led to an understanding of the truth as taught in Christian Science. I am indeed grateful to Mary Baker Eddy, who dared to be faithful to God and to man, for this wonderful truth that has brought to me peace and joy. I am also grateful for the privilege of class instruction and to have been able to demonstrate this truth for myself and others.

(Mrs.) Sue C. McKemie, Gainesville, Texas.

In the summer of 1902 Christian Science healed me, in two treatments, of neuralgia of many years' standing. During the first few years after my healing, there would occasionally come suggestions of the old belief, but by promptly applying the truth, as Christian Science teaches us to do, they were overcome immediately, and I have been permanently healed.

Since then, through reading the textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I have been healed of various ailments, among which was a difficulty with one arm, which I could only raise a little way from my side. It seemed to be held as by a band on the upper arm. After I had been reading a while I discovered the seeming band had gone, and I could use that arm as readily as the other one. This healing has also been-perma-

nent. I have not used material remedies since my first healing in Christian Science. I find that I am better natured. I used to get very angry, but anger no longer holds me in bondage. Best of all, however, is the spiritual help, the consciousness that man is spiritual and is God's likeness.

The greatest joy I have ever known has been in helping others to find the truth in Christian Science. I am very thankful for all the channels through which the truth comes to us; for the textbook, and all the other writings of Mrs. Eddy, for the concordances; and also for the periodicals, which bring so much of good to us. Life to me without Christian Science would be dreary indeed. I hope this testimony may help some sufferer as I have been helped by reading those of others.

(Mrs.) REGINA C. YOUNT, Los Angeles, California.

4

I wish to express my gratitude for the wonderful help I have received from Christian Science through the knowledge of God's power to heal. I suffered for many years and was finally given up by the doctors. I myself felt that my case was hopeless when a Christian Scientist came to see me and asked permission to call a practitioner. In just two hours I was healed. That was eleven years ago and since then I have had many wonderful demonstrations. A broken bone was healed in a remarkably short time. I have also been healed of headaches. I am grateful for the Sentinel and other Christian Science literature, of which I am a constant reader. I am deeply grateful to God and to Mrs. Eddy for her beautiful revelation of the truth.

(Mrs.) ELLEN SMITH, Oatman, Arizona.

4

The much valued editorial, "Readiness to Write," which appeared in Der Herold for August, 1920, encourages me to express my gratitude for the numerous blessings which I have received through Christian Science. At the beginning of the year 1913 I was wonderfully led to Christian Science, not having previously heard of this religion. I was at that time taking a course in dressmaking in order to further improve myself in this line of work. The ability of our teacher made a wonderful impression on me, actuating me to remark one day, "You are working with a higher power than the human." After the session the teacher requested me to remain and gave me some Christian Science pamphlets to read. She was a Christian Scientist, and later recommended a kindly woman who explained Christian Science to me, and I was soon able to make practical application of what I understood of its teachings. Having passed through much trouble since childhood, it soon became clear to me that Christian Science is a divine protection against all evil, that it is the true way of Christianity.

I made wonderful progress in the understanding of God, and applied this understanding in my business to such an extent that all with whom I associated marveled at the results, and after a three months' course I myself was able to instruct classes in dressmaking successfully.

During this time I had hostilities to meet in the house where I was residing. I had spoken of this to the Christian Scientist and followed her loving advice. It cost me a great struggle, but the joy and peace of this victory were even greater. Never shall I forget what I experienced in my first demonstration. It consisted of obedience to Jesus' command: "Love your enemies, bless them that curse you." My seeming enemies as well as I myself were as beings transformed. Since then I have received many new proofs of ever present Love through my broadened understanding of the

truth. I have also been healed of chapped hands, and anger has been overcome.

4

In the summer of 1919 my business was in a very disturbed condition, on account of which my health was affected. As I was unable to help myself at this time, I requested the help of a Christian Science practitioner, and in three weeks I was again restored. Gradually I am becoming conscious of the divine government in every phase of my affairs. When occasional impediments seem to block the way, I have no fear, but turn my thoughts in safe paths, for we have the assurance, as we are so beautifully told in Isaiah: "Unto us a child is born, unto us a son is given: and the government shall be upon his shoulder: and his name shall be called Wonderful, Counsellor, The mighty God, The everlasting Father, The Prince of Peace." I thank God and am grateful to Mrs. Eddy for her work so rich with blessings, also to all the dear people who have shown me the way to the light .- (Miss) Louise Geiger, Ermatingen, Thurgau, Switzerland.

Christian Science has been a constant source of help to me for over ten years, and every day I have more cause to be grateful for it. It has cured me of nervous dyspepsia to which I had been subject since I was quite a child. The slightest excitement or extra exertion, especially after a meal, would bring on an attack, so that very often when I was supposed to be enjoying myself most I was in misery. This difficulty did not yield readily, for I felt quite well between the attacks and did not even ask for help, and when I was suffering I felt too lethargic to help myself, and was also skeptical as to the power of Christian Science to help me. A feeling of antagonism always tried to assert itself; the suffering sense wanted nothing other than to be let alone to wear itself out. But at last one day I mentioned it to a Christian Science practitioner who had given me much help in other ways. I had one treatment, and that was the end of it! The old symptoms returned perhaps twice or three times after that. at long intervals, but the mesmeric lethargy had gone and the symptoms were met and mastered within a few minutes in each instance, and that is a long time ago.

I have had many instantaneous healings of such things as bad headaches, toothache, influenza, and diphtheritic throat. Each healing of this kind has been a joy and encouragement, for it has proved that, just so far as one has learned the Science of spiritual healing correctly and applies the understanding gained, there is nothing to hinder progress. Physical healing for one's self becomes less frequent, however, for Christian Science is preventive, and one's desire is for greater spiritual knowledge.

I am grateful to be learning something of God and His creation, and to know my true self, which is taking away a great sense of responsibility. I had always been afraid that I should drift through life without making use of the talents with which, presumably, I had been endowed. Having a certain amount of ability, but with many disabilities to offset it, I was, from quite early years, full of self-condemnation and remorse for what at the time I felt I could not prevent. With many conflicting ambitions and a great weight of indolence and timidity, my life seemed a wilderness. Christian Science is changing all that. My life is happier and more purposeful.

Mrs. Eddy says in the Christian Science textbook, "Science and Health with Key to the Scriptures" (p. 506), "Spirit, God, gathers unformed thoughts into their proper channels, and unfolds these thoughts, even as He opens the petals of a holy purpose in order that the purpose may appear."—(Miss) Helena Cotton, Macclesfield, England.

Signs of the Times

["Expectation"-The Christian Science Monitor, Boston, U.S.A., Jan. 4, 1921]

In one of his lectures on Shakespeare delivered in London, a little over a century ago, Coleridge, under a sectional heading, "Expectation in preference to surprise," has this to say: "It is like the true reading of the passage: 'God said, Let there be light: and there was light;' not there was light. As the feeling with which we startle at a shooting star, compared with that of watching the sunrise at the preestablished moment, such and so low is surprise compared with expectation."

There is a great truth in this statement. Whether Coleridge's reading of the particular passage in Genesis to which he alludes commends itself or not, the fact remains that expectation must ever be "preferred" to surprise for the reason that expectation is the normal attitude of man, surprise having no place in real consciousness. One dictionary definition of expectation is "awaiting with confident anticipation." This attitude of awaiting with confident anticipation underlay all Jesus' teaching and was characteristic of all his works. The Christian, as Jesus conceived him, took no thought for what he should eat or what he should drink or what he should put on. Why? Because he recognized that the Father knew he had need of these things. The Christian, as Jesus revealed him, never resorted to drugs for the healing of the sick or to any material means for overcoming apparent obstacles, or for defending himself against evil happenings. His appeal was ever to Spirit, and his attitude was one of "confident anticipation" that this appeal would be and must necessarily be answered. "Father," said Jesus at the tomb of Lazarus, "I thank thee that thou hast heard me. And I knew that thou hearest me always," and to his disciples on another occasion, "Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them."

It is, indeed, impossible to imagine Jesus of Nazareth, the man who could instantaneously heal all manner of sickness, who could stop a storm at sea as readily as he could feed a multitude in a desert place or procure tribute money from a fish's mouth, being surprised at anything. To him there were no such things as shooting stars of chance blessings, but just the confident anticipation of blessing to be revealed at the scientific moment when such revelation was requisite. The multitude may have been surprised, may have marveled when the leper was cleansed; to them it was a shooting star indeed. To Jesus of Nazareth it was simply "the sunrise at the pre-established moment."

It is just this reign of expectation which any study of Christian Science at once begins to reestablish in human consciousness. It eliminates the belief in chance, and establishes the understanding of law. Man, as revealed in Christian Science, is seen to be what he is, in the Bible, declared to be, the image and likeness of God. God is seen to be Spirit, ever present and all-powerful. Matter is shown to be what Jesus proved it to be—nothing. God, in Christian Science, is further revealed as Life, as Truth, and Love, as divine Principle. In this reality of all things brought to light, law is revealed as supreme and final.

When, therefore, Jesus bade his disciples ask and they would receive; seek and they would find; knock and it would be opened to them, he added this by way of explanation, "For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened." In other words, asking involves receiving; seeking involves finding; knocking involves the door being opened.

Jesus was quite emphatic on this point. One of the most notable features in his teaching was his insistence that those who heard him and believed on the Christ could do the works that he did and even greater works. He told his disciples that if they asked anything in his name he would do it, meaning, it is clear, thereby, that any one who appealed to the Christ, or Truth, as he had revealed it, would achieve the object of their appeal in the manifestation of the truth. The Son, he declared to his disciples, could do nothing of himself but what he saw the Father do, but what things soever the Father did, these did the Son likewise. Or as Mrs. Eddy puts it on page 516 of Science and Health: "As the reflection of yourself appears in the mirror, so you, being spiritual, are the reflection of God. The substance, Life, intelligence, Truth, and Love, which constitute Deity, are reflected by His creation; and when we subordinate the false testimony of the corporeal senses to the facts of Science, we shall see this true likeness and reflection everywhere."

More and more, therefore, as these "facts of Science" are understood, does expectation tend to become the abiding state of consciousness, and more and more is the element of surprise eliminated. For Christian Science teaches that man in the image and likeness of God, Principle, is perfect, even as God, Principle, is perfect, and that in the presence of apparent discord a recognition of this great fact will restore harmony. Man is not sick, he is forever well. Man is not poor, in trouble, in doubt. He is forever abounding in all he needs, forever untroubled, forever clear in his outlook on all-wisdom, omniscience, Truth, God. To the student of Christian Science, who faithfully practices what he learns, the Sun of Righteousness is forever arising. As John Burroughs has expressed it:—

The stars come nightly to the sky;
The tidal wave unto the sea;
Nor time, nor space, nor deep nor high
Can keep my own away from me.

And what is "my own"? Paul answers that question with his usual completeness in his first epistle to the Corinthians. "For all things," he says, "are yours." And so the student of Christian Science has done with shooting stars. When faced with any problem, no matter how seemingly difficult, his attitude is one of expectation, "watching the sunrise at the preestablished moment," awaiting with confident anticipation the fulfillment of law.

[From a Letter in The Commercial, Pine Bluff, Arkansas]

Christian Scientists are threatened with dire penalties if doctors of the regular sort are not called in to attend the sick, according to a recent news letter quoted in *The Commercial*. Much to the satisfaction of the political doctor to whom it was addressed, it was specially directed against Christian Science parents, but it was calculated to strike terror and consternation into the hearts of all parents if they should use Christian Science for the healing of their children. The threats are groundless, for neither the law of God nor the state the attorney is in will permit such misuse of authority.

The fact that it is written to a political doctor calls strongly to mind the intolerance of a few doctors in politics. There is only a very small minority in politics; most doctors are too busy honestly ministering to sick folks to have time or desire for politics; but these few want "general supervision and control of all matters pertaining to the health of the citizens of the state." It is these few who constantly bombard legislatures for more law and more money with which to compel citizens to submit to state medicine. Medico-politicians do not seem to know that the very foundation of

s point. Oz: American law is laid deep. "In God we trust." For that his indicates Christ order S. He ellis me be wellone who the it wid : ation of tieıld do sır t what ine. 0 = 15 th: Asian 1. beingin Life, inter te tellere false tem

reason the Constitution allows no law to interfere with a man's conscience and say what he shall or shall not do for the healing of his body. The Constitution of the United States recognizes that "where the Spirit of the Lord is, there is liberty," law, order, and health. It affirms that man has a free, unmolested, and fundamental right to go to his Maker, "who healeth all thy diseases." The Declaration of Independence affirms the fundamental law, that the very life of a man is derived from God, his divine Principle, in these words: "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." The constitution of Arkansas recognizes the same divine Principle to be the source of fundamental law for man, since all men have certain inherent and inalienable rights from their creator; and for that reason "no human authority can in any case or manner whatsoever, control or interfere with the right of conscience.'

Thus the law maintains that the citizen has a prior right of conscience derived from his creator, with which no human law may interfere. The laws of Arkansas, recognizing the fallibility of material methods and beliefs, assure the citizen he has an inherent right to choose any method of healing he desires. For that just conclusion, and to keep the conscience of the individual free from human trammels, the law says, "The state board of health shall not regulate the practice of medicine or healing, nor interfere with the right of the citizen to employ the practitioner of his choice."

But aside from his inherent right to choose a mode of healing, the Christian Scientist has proof that Christian Science is the law of God made plain to human apprehension in "Science and Health with Key to the Scriptures" by Mary Baker Eddy. We read in this book (p. 1), "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." Now if there be one who does not know that Christian Science heals every disease with which humanity is afflicted, all he has to do is honestly to attend a Wednesday evening meeting in a Christian Science church, and all the testimony desired will be forthcoming from those who are living evidence of its healing powers. Or if he wants statistics, the board of health of the state from which the letter issued informs that during the influenza epidemic there were 68 fatalities per 1000 cases reported; under Christian Science treatment (not in the above report, but just as reliable nevertheless) there were less than 4, or to be exact, 3.36 fatalities per 1000 cases reported. That is, fatalities were 20 times greater under all schools of healing (Christian Science excepted) than under Christian Science treatment. No Christian Scientist is going to allow his child to suffer and languish with disease without spending every effort to heal his loved one. It is not the law of God, and it is foreign to the spirit of Americanism, to compel a parent to do violence to right and reason in the treatment of his child. Parents have an inherent right to employ Christian Science if they so desire.

["Fear or Faith?"-From The Evening World, New York City, N. Y.]

Commenting on the joint resolution for disarmament recommended by the House Committee on Foreign Affairs, the chairman of the committee expressed the opinion that the United States "should take the initiative, not in a spirit of fear, because we have nothing to fear, but in that spirit that has always animated America in her effort for betterment of humanity."

"Not in a spirit of fear!" That is the proper note. "We have nothing to fear!" Nothing could be truer. We need more of such expressions, and from responsible Republican spokesmen. This nation and all the nations of the earth need more than any other one thing to rid themselves of fear and put faith in its place. For all the ages, fear has been the drag on progress; faith has been the motive power. Only as faith has triumphed over fear has the world grown better. . . . After a year of intensive cultivation by politicians, fear is strongly intrenched. It will be a huge task to tear down and destroy the mass of misrepresentation and deceit in which fear has flourished. But it can be done. Faith wins in the long run, always. The world progresses, even though haltingly. Let us go forward in faith, and "not in a spirit of fear, because we have nothing to fear."

[From "How Did Mrs. Eddy Discover Christian Science?" by Dr. James L. Gordon, Pastor First Congregational Church, San Francisco, California)

I should say that the individual who affirmed that "Christian Science is not a religion," had not made a very thorough study of the subject of "comparative religions." . . . Mrs. Eddy had an experience which was unique, original, and full of God. Her book, "Science and Health with Key to the Scriptures," was founded on that experience. Her church was founded on her book. Her life may be divided into two parts. First, forty years in searching for a particular truth, and second, forty years in building up a Christian church. I say "Christian church," for Christian Science is merely passing through the same sort of opposition which stood in the way of the Baptists, the Methodists, and the Quakers in the early days of their existence. . . . Mrs. Eddy was fortunate in the selection of a name. The oldest thing in the world is religion. The newest thing in the world is science. The two greatest names in the world, to-day, are Christianity and Science.

["The Sign of the Times," by Oskar Seitz, Translated from the German]

When the Pharisees asked Jesus for a sign he said to them, "Ye can discern the face of the sky; but can ye not discern the signs of the times?" This answer contained a rebuke to the Pharisees as well as an admonition to us. We, too, should be able to discern correctly "the signs of the times." The words, "Judge not according to the appearance, but judge righteous judgment," show clearly that we should not judge according to the material evidence but recognize the things as they are according to their mental cause. In metaphysics we learn that every movement a man makes and every action is based on thought.

As the course of the celestial bodies reveals a law, known to comparatively few, so the events of the world's history reveal thoughts, and thought tendencies, which can be recognized and discerned correctly only by those who have learned to think metaphysically through, Christian Science. In the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, we read (p. 462): "Anatomy, when conceived of spiritually, is mental self-knowledge, and consists in the dissection of thoughts to discover their quality, quantity, and origin. Are thoughts divine or human? That is the important question. This branch of study is indispensable to the excision of error." And in the same paragraph she continues, "The Christian Scientist, through understanding mental anatomy, discerns and deals with the real cause of disease," not alone of every physical disease, but of every moral and political disease

The main events of recent times, which have fallen upon

N. 15 1. 17

so many unprepared minds with such great force every one knows: a war such as there has never been before, shaking the whole world; the bankruptcy of government systems; the failure of old established forms of religion; strikes all over the world; need, misery, hunger, epidemics. Only those who before the catastrophe observed the "signs of the times," and valued correctly the expressions of error,-error abusing and seeking human means and organizations,-were not astonished when it came to pass. Countless theories regarding existence are supposedly taking the place of faith in the one and only God. Health, strength, intelligence, and life are being made subject to food, air, exercises, chemicals, powders, and pills. The happiness of a man is being measured by the luxuries and pleasures he can afford. Sensuality is made into an idol and folly the purpose of living. Again and again we read in the Bible of the discord the Jews experienced whenever they turned from divine Principle to material gods. Starvation, pestilence, and slavery followed, and were healed only when they turned back to the one God. The example of great, God-inspired men showed them the way out of this misery. And from them we, too, can learn and raise ourselves and our fellow men out of this wreckage.

Harmony is a divine law, the effect of Truth, Spirit, God. Every inharmony, regardless of surroundings, vanishes as one gets nearer God through the understanding of the truth. Elias and the family of the widow to whom God had directed him had enough to eat during the famine in Israel. Daniel and his three friends were honored during the captivity in Babylon, and Daniel was made ruler even over the chief of the governors. The Christian Scientist is not afraid of the "signs of the times" nor does he fear the coming events. Christian Science shows him how to overcome every discord through right thinking. And he who does his work faithfully helps not only himself but all his fellow men. He lessens their burdens and through his example shows them the way to freedom. It is therefore the sacred duty of every Christian Scientist to protect his mental independence and to realize that he is not the defenseless victim of his surroundings, and that external conditions have no power over him. Christ has given to all power over every discordant condition.

In the twenty-fourth chapter of the gospel of Matthew we read this significant and very interesting record of an answer Jesus gave to his disciples when they asked him what would be the sign of his coming. The Master said: "For nation shall rise against nation, and kingdom against kingdom: and there shall be famines, and pestilences, and earthquakes, in divers places." "Immediately after the tribulation of those days shall the sun be darkened, and the moon shall not give her light, and the stars shall fall from heaven, and the powers of the heavens shall be shaken: and then shall appear the sign of the Son of man in heaven." The sign of the Son of man, the sign of eternity, is Christian Science.

[From Report of the Sessions of the Church Congress at Rochester, New York, in The Living Church]

The ministry of healing was described by one speaker as one phase of effort of our Savior Jesus Christ to achieve a great objective, in which his disciples shared. Early Christians formed an estimate of Jesus Christ on the basis of his ministry. From the close of the apostolic age it appears and disappears from time to time. It may be that the Holy Spirit is trying to reveal more and more.

To-day, is the gospel only for those who are sound in health? The sick have been neglected. Failure to notify

the clergy is a poor excuse for this neglect. The deacon is commissioned at ordination to search for the sick. . . . % the priest and the bishop have the deacon's obligation. The bishop is commissioned to heal the sick, as part of his pastoral office.

Another speaker said that we have a new knowledge of the life of Jesus Christ. He lifted the burden of disease. The weapon in the warfare against diseases of mind, body, and spirit is boundless faith in God. In the cure of mental and physical maladies and cases of demon possession, faith effects cures where all other methods fail.

[From Manufacturers Record, Baltimore, Maryland]

The economic value to the United States of prohibition has strongly impressed itself upon Colonel F. Vernon Willey of England, who recently made a study of this subject while in our country. The Pall Mall Gazette quotes Colonel Willey as having reached the following conclusions: "I have come away with two clear generally held opinions: (1) That, on the experience to date, if the measure were put to the vote it would be retained. (2) That its effect has undoubtedly been to increase general industrial efficiency.

"There is no doubt that the nation as a whole benefits enormously: (a) From the increased industrial efficiency. (b) From the general elevation of the community following the abolition of the saloon, (c) Increased material prosperity by the direction of expenditure into various commodities, better food, clothing, and housing, and so forth, instead of into liquor. On the grounds of the advantage which America will get from its increased industrial efficiency, and from the savings, or redirected spending into manufactured articles which give greater employment, and so intensify industrial development, it would seem that the advantage which the United States would appear to have over other countries which have not adopted prohibition justifies very close scrutiny of its economic aspects."

[Oliver M. Fisher, President of the Boston Boot and Shoe Club, as Quoted in The Boston Herald]

In this crisis I turn to religion as our only hope. A liberal religious faith must be the heart of a covenant of all business life to make it ring true. In this critical readjustment period, it is most essential to preserve the highest standard of business ethics in foreign trade, as in domestic commerce. Our whole commercial structure rests upon the sanctity of contracts, and they, in turn, upon solemn, moral, and religious obligations.

[Laymen Appeal for Prayer]

A group of representative Protestant laymen from all parts of the United States have issued through the press recently an appeal for prayer which reads in part as follows:

"The laymen who sign and issue this paper so do because of a deep conviction that only by spiritual forces may our civilization be saved from the unprecedented perils that beset it. The only way out is the way up. Our world will never get right with itself until it gets right with God. Only spiritual remedies can cure the present ills of mankind. We crave for ourselves and for our time a revival of the sense of the reality of God, and of our dependence upon Him, and of a spirit of loyalty to Him. So we entreat all spiritually minded persons, in whatever ways and at whatever times individual judgment may suggest, to engage, privately or publicly, in daily prayer, that the very gravity of present world conditions may drive us all to the eternal

and it is God who is our refuge, and who is the only Light in our darkness. In Him we shall find peace and good will, and ski see power for the task of remaking the world. 'All things, whatsover ye shall ask in prayer, believing, ye shall receive."

[From The Christian Science Monitor]

it dixes Mr. B. C. Spoor, Labor member of the British Parliad has ment for a mining constituency near Durham, has blamed dense the universities for not teaching their students properly, and in particular for not teaching them to think. Hard on the heels of his speech comes a gift from a reformer to establish in London University a professorial chair, the occupant of which shall teach that very thing. "The purpose of this foundation is that students may be taught, not what Aristotle or any one else thought about reasoning, but how to think clearly and reason correctly." The professor is to be chosen for his ability to think, reason, and teach, and not for his acquaintance with the opinions of logicians or philosophers. He is to proceed on the idea that the only way to acquire an art is to practice it under a competent instructor. Are there not some who have most naturally imagined that thinking was what people at the universities were chiefly doing, and to whom all this will come as a surprise?

[From an Introduction to a Christian Science Lecture in Valparaiso, Indiana, by the President of Valparaiso University]

The substitution of understanding for belief makes a rich mit I. : life and helps us to be closer to our Maker. "Happy is the man that findeth wisdom, and the man that getteth understanding."

The day for beliefs is past. We are entering upon an era, the greatest era of human experience, that of understanding. In all the great scientific theories that have been advanced, more and more we are beginning to realize that matter is only an expression of the human mind and that it exists only as an objectified belief of this mind. . . .

:110 To understand our Maker and His laws is to throw away belief and to know. Belief is an expression carrying an element of doubt. Understanding is an element carrying certainty. When we understand, we know how to do the right thing and to follow in the paths that the great Leader, Teacher, and Healer has shown us. A man becomes more in the image of his Maker when he realizes and understands the divine Principle as taught the world by the Savior.

[From the Second of a Series of Lectures on "The Church and Labor," by Rev. Norman Maclean, as Reported in the Glasgow (Scotland) Herald]

The church has to emphasize a message for each generation. The message to-day is that law must be supreme. The great law is that of truth. The workman who demands the maximum of pay for the minimum of work, who adopts a "ca' canny" policy, is contravening the law of truth, just as the financier who by cunning manipulations tries to get more than his share, is contravening the law of truth. The church must insist that men cease thinking of classes and begin thinking of humanity as a whole. Only when men sink their interests for the welfare of the whole can they rise to the Christian ideal. Above all, the church has to preach the absolute need of a new spirit. The only way to get rid of envy, jealousy, hatred, is through love. The law of love, the truth of brotherhood, is the remedy for all men's woes. The goal of a reconstructed civilization will be reached when we are guided not by self-interest but by cooperation.

Speaking of the last remaining yoke, the lecturer said that there is one grievous slavery still affecting the nation [Scotland], rich and poor alike, and that is slavery to alco-

hol. The fact that one hundred and fifty thousand citizens of Glasgow voted for the elimination or the reform of the trade was the brightest augury for the future. Deliverance has always come in the past not from the ranks of the victims, but from among those whose hearts were kindled with indignation at beholding human misery. The heart of the church has to be kindled into the flame of a new crusade. That the massed population of the great cities of the land should be left the prey of thirty public houses to the halfmile would be a scandal crying to heaven. The church would confer on the people the greatest of all boons, the lecturer averred, if it would lead the way in this. In this, as in all else, deliverance may seem to come slowly, the chariot wheels may seem to tarry, but the chariot is on the move and nothing under heaven can stop it.

[From Evansville (Indiana) Journal]

The monthly bulletin of the Indiana state board of health for September which has just been distributed, is a very interesting magazine. Besides vital statistics for the period, it publishes very interesting data and brings one to the conclusion that the officials of the state board are united in the opinion that the medical profession is helpless unless the people themselves keep their bodies in good condition. One of its paragraphs in reference to medicines is especially interesting and follows:-

"If medicines would cure the ills of mankind, it is plain that long ago disease itself would have been banished from the earth. The earth has been ransacked for drugs to cure. Everywhere we see emblazoned advertisements of medicines which the advertisement says will cure every disease, from corns and ingrowing toenails to the worst diseases; and yet sickness and disease grow apace with our civilization. The world has been fine combed from the equator to the poles for a something with which to bring health and prolong life; and lo and behold, like the bluebird, these blessings are in every household patiently waiting to be called."

Church Notices

+++

BOSTON, MASS.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken

for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size $8\frac{1}{4}$ " x $10\frac{3}{4}$ ". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to In-

tervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at \$100.00 each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

Orders for Pacific Coast and Rocky Mountain States

In order to facilitate the filling of orders for the Pacific Coast states and to expedite delivery, orders and remittances from reading rooms and individuals in the five postal zones east of San Francisco, with the exception of orders and subscriptions for *The Christian Science Monitor*, *Journal*, *Sentincl*, *Quarterly*, and *Heralds*, should now be sent direct to The Christian Science Publishing Society, Pacific Coast Depot, 255 Geary Street, San Francisco, California.

The Pacific Coast Depot will continue to handle subscriptions and supply periodicals only to San Francisco and immediate vicinity.

The first five zones east of San Francisco include all of California, Oregon, Nevada, Washington, Idaho, Utah, Arizona, and approximately all points west of Billings, Montana; Cheyenne, Wyoming; Denver, Colorado; and Las Vegas. New Mexico, including these cities. The local post offices in the last four states mentioned will supply further information regarding the fifth zone limit.

The above notice does not apply to Canadian territory.

European Orders for Bibles

The arrangement of the Publishing Society, whereby the Christian Science reading rooms in Great Britain and Continental Europe have been accustomed to order Bibles directly from the Oxford University Press, London, sending payment for these orders to The Christian Science Publishing Society in Boston, has been discontinued, and these reading rooms are now requested to send their orders accompanied by remittance to the London office of The Christian Science Publishing Society.

The Oxford University Press will henceforth fill for the Publishing Society only those orders received through our London office. Address all such orders for Bibles to The Christian Science Publishing Society, Amberley House, Norfolk Street, London, England.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlet in Russian

There is now on sale a new Russian translation of "Christian Science: Its Advantage to Mankind" by Edward A. Kimball, with alternate pages in English. Price 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U. S. A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

THE campaign which you are waging for the protection of the national parks is a wonderful example of what can be done by a newspaper for the public welfare. The articles are exceedingly well written and bring out points which should appeal to every member of Congress.

INCLOSED find 75 cents for one month's renewal of my subscription to THE CHRISTIAN SCIENCE MONITOR. You will never know the good it has done me and my home. As a result of reading it for the past three months the effects of an oil explosion have been overcome, which threatened to cost a loved one the loss of his right arm and possibly his life. Truly "Life is God," and cannot be destroyed by fire.

I GET much enjoyment and profit from reading The Christian Science Monitor. In my opinion it is the best paper in the world. I read several foreign papers, and find that the Monitor is the only newspaper published in this country, to my knowledge, which prints foreign news, not as the particular policy of the paper wants it given out, but as it actually is.

IN renewing our subscription to THE CHRISTIAN SCIENCE MONITOR, I want to tell you of its great help to me as a teacher. Every student who graduates from our school (about one hundred and fifty each year) is required to give an oration, and I find the Monitor an unfailing source in supplying subjects and giving students a foundation upon which to work. Appreciation is being expressed constantly in the home by different members of the family.

WORKS ON CHRISTIAN SCIENCE

Written by MARY BAKER EDDY, Discoverer and Founder

of Christian Science and Author of its Textbook

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only textbook on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each \$3.00; twelve or more, each \$2.75. Ooze leather, vest pocket size, single copy \$3.00; twelve or more, each \$2.75. Morocco, vest pocket size, single copy \$3.50; twelve or more, each \$3.25. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy \$4.00; twelve or more, each \$3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$5.00; twelve or more, each \$4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy \$6.00; twelve or more, each \$5.75. Large Type Edition, designed especially for the use of First Readers. Large Type (18-point) on Warren's heavy India Bible paper, bound in leather. Size 8 by 1034 inches. Single copy \$7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

FRENCH TRANSLATION. Alternate pages of English and French. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

GERMAN TRANSLATION. Alternate pages of English and German. Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science versus Pantheism, and the Messags of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more; each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston.

Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

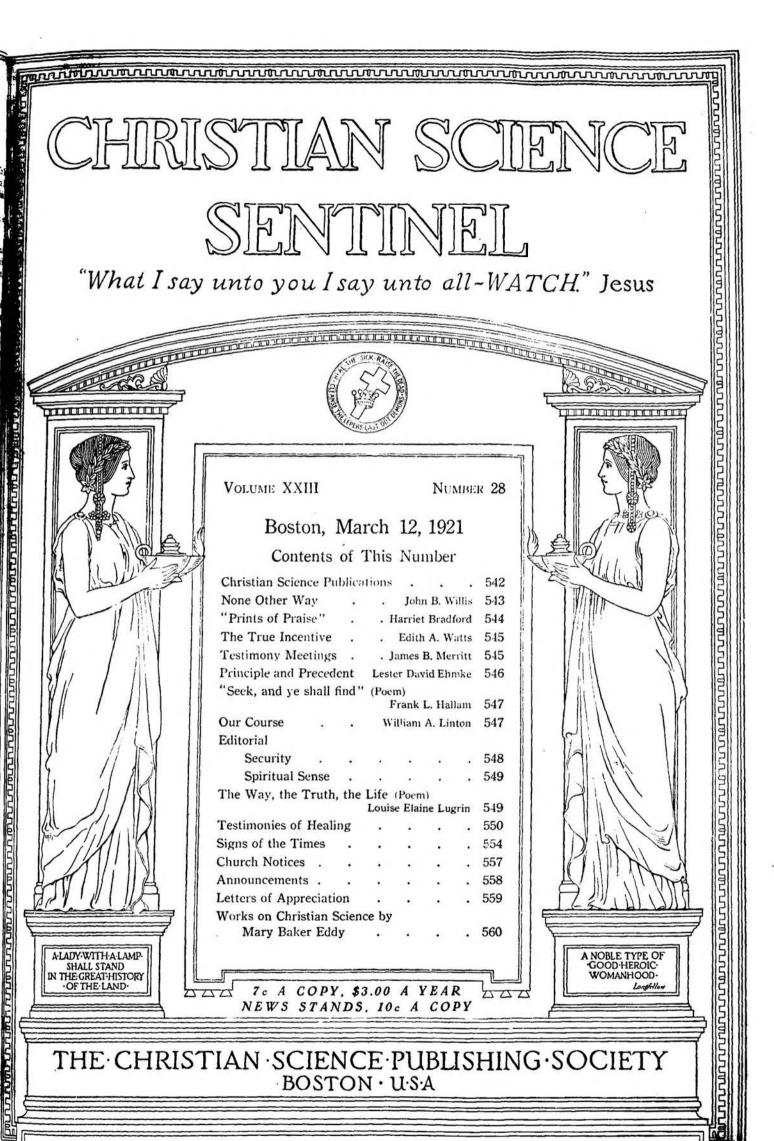

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, silt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

Christian Science Literature

"Science and Health with Key to the Scriptures" and all other published writings of Mary Baker Eddy are listed on the outside back cover page of this Sentinel.

Christian Science Sentinel

Established, 1898, by Mary Baker Eddy. Published weekly, containing articles, editorials, and special current information regarding the Christian Science movement, also testimonies of healing. Subscription price, payable in advance, postpaid, to all countries: One year, \$3.00; six months, \$1.50; three months, 75 cents; single copy, 7 cents.

The Christian Science Journal

Founded, 1883, by Mary Baker Eddy. This monthly magazine is an official organ of The First Church of Christ. Scientist, in Boston, Massachusetts. Contains articles, editorials, and testimonies of healing, a directory of Christian Science Churches, Societics, and Reading Rooms; also in the January, April, July, and October issues a list of Christian Science Practitioners and Nurses. Subscription price, payable in advance, postpaid to all countries: One year, \$3.00; six months, \$1.50; three months, 75 cents; single copy, 30 cents.

The Christian Science Quarterly

Founded, 1890. by Mary Baker Eddy. Published January, April, July, and October. Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. Printed in English, English-Dutch, and English-German. English edition published also in vest pocket size. Subscription price, payable in advance, postpaid, to all countries: One year, \$1.00; single copy, 25 cents.

The Christian Science Monitor

An International Daily Newspaper. Founded, 1908, by Mary Baker Eddy. Daily, except Sundays. Its own world-wide news service is supplemented by the service of the Associated Press and of the United Press Association. Complete in its departments; unique in its Home Forum page. Full page of editorials dealing truthfully and fearlessly with vital questions of the day. Subscription price, payable in advance, postpaid to all countries: One year, \$9.00; six months, \$4.50; three months, \$2.25; one month, 75 cents; single copy, 5 cents.

Le Héraut de Christian Science

Established, 1918. A periodical published monthly in French, with alternate pages in English, containing articles and editorials on Christian Science, and testimonies of healing. Subscription price, payable in advance, postpaid to all countries: One year, \$2.00; six months, \$1.00; three months 50 cents; single copy, 20 cents.

Der Herold der Christian Science

Authorized, 1903, by Mary Baker Eddy. A periodical published monthly in German, with alternate pages in English, containing articles and editorials on Christian Science, and testimonies of healing. Subscription price, payable in advance, postpaid to all countries: One year, \$2.00; six months, \$1.00; three months, 50 cents; single copy, 20 cents.

Subscriptions will begin with the next issue after the receipt of the order. Information regarding bound volumes of the weekly and monthly periodicals will be given upon request.

NUMBER 28

None Other Way

JOHN B. WILLIS

WE are living in an era of ever increasing liberality of conviction, when most men are disposed to recognize some values in well-nigh every phase of past and present belief. Much of the hard and fast dogmatism of the saints of all ages is now quite unhesitatingly, though reverently, passed by, and hence, in all probability, it is a bit disconcerting to so-called "free thought" to come upon the finalities of assertion which characterize Christian Science teaching, even as they characterized the teaching of Christ Jesus in the long ago. Here one finds no indulgence of a fluctuating attitude of mind, no spirit of hospitality to any and every vagary of opinion. On the contrary, he constantly meets with such a "determination of the whole matter" as will be judged either "irritatingly presumptuous" or else "the argument-ending dictum of immutable law." With the teachable and the aspiring, the Master always showed himself to be patiently uncritical. Even Thomas' hard-headed unbelief elicited only a very gentle rebuke. His disclosures of the ill-logic, the contradictory nature of current religious beliefs, were so considerate and tactful as to offend only the more bitterly prejudiced, and yet in his declarations of truth he habitually spoke as one having that indisputable "authority" which is and can be based only on a knowledge of the absolute. He knew, and he taught his disciples how they might come to know by subjecting every question and judgment to the determination of demonstrable Science. Herein he was uniquely great, and Christian Science affirms that herein, withal, we are to be "like him." We are to "see him as he is," by that knowing of the truth, as he knew it, in which faith becomes spiritual understanding.

When speaking to the willfully resisting Pharisees of the exaction of God's moral requirements, our Lord's words may seem severe. He said, "He that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber." He saw, as we must come to see, that the maintenance of the integrity of right involves its inflexible opposition to wrong; that the truth never has consented and never can consent to any least error whatsoever. This is the meaning of that divine intolerance which finds such frequent expression in the Old Testament. Every blessing of which Moses assured the obedient in his last great exhortation to Israel was matched by a no less specific curse upon the disobedient, and Joshua gave this fact a dramatic emphasis in the setting he arranged for these great pronouncements over against Ebal and Gerizim. Of these, "the blessings and cursings," it is said, "There was not a word of all that Moses commanded, which Joshua read not before all the congregation of Israel." So, too, Isaiah represents the call of the "anointed" as not only "to preach good tidings unto the meek" and "to proclaim the acceptable year of the Lord," but to proclaim also "the day of vengeance of our God"! Everywhere the prophetic utterance declares that "the besom of destruction" will follow and find all those

who harden their hearts and refuse to come to a knowledge of the truth. The punishment—that is, the destruction of wickedness, all error—is both unescapable and eternal, and this is seen to be in the very nature of the sovereignty of Truth. As a variation of the significance of any least integer of the multiplication table would effect inevitable chaos in the entire realm of mathematics, so any least consent to the imperfect or unideal would precipitate disaster in all God's kingdom. The immutability of good is an essential basis of all being, and it is this that renders a divine dogmatism both legitimate and natural.

All this enables one the better to understand Peter's words when, being "filled with the Holy Ghost," he said, "There is none other name under heaven given among men, whereby we must be saved." It is as though he had said, "Since there is but one cause and creator, there can be but one law, one gospel, and one order and means of salvation." Truth embraces the totality of the real, error the totality of the seeming; hence in the last analysis human redemption, transformation, restoration, salvation, whatever the name, can be effected only by the substitution of truth for error in consciousness. "This awakening," as Mrs. Eddy says, "is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick" (Science and Health, p. 230), and she recognizes the identity and continuity of this appearing to the spiritually aspiring when she says further, on page 333, "Throughout all generations both before and after the Christian era, the Christ, as the spiritual idea,-the reflection of God,-has come with some measure of power and grace to all prepared to receive Christ, Truth."

Here one gains the larger and truer meaning of Christian Science. If there is but one infinite truth, to know this truth and its manifestations, and to be governed thereby, must be the one religion which, as Jesus said, is "life eternal." One's thought of Christian Science, the Christlike knowledge of Truth, is thus freed from all bondage to local, limited, denominational concepts. We discern that the demonstrable understanding of God, divine Principle, is the one universal and essential fact of religion, of all true and righteous consciousness. Hence Mrs. Eddy's kindly estimate of the faith of Socrates (Science and Health, p. 215), hence the propriety of a like attitude of mind toward sincere seekers for Truth in every age and of every belief. How broadening this truer view of the compass and nature of Christian Science! How immediately and effectively it rebukes all conceit, all narrowing prejudices, and contributes to the growth of that casteeliminating sense of the brotherhood of man which is the world's great need.

One unvarying Truth, or Principle, and one law, the order of Truth's expression,—how much more clearly, in a way, these fundamentals have been discerned and made manifest by mathematicians and physicists than by the great body of professed Christians, and how incongruous and unfortunate for humanity this fact. Christ Jesus knew the one truth about God, and man, and the nature of being, and he proved

Converight, 1921, by The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Massachusetts. Entered at Boston post office as second-class matter. Acceptance for mailing at a special rate of postage provided for in section 1103, Act of October 3, 1917, authorized on July 11, 1918.

the verity of his knowledge, its adequacy to the destruction of every error, the healing of every sickness and sin, the solution of every human problem. Further, he illustrated the way in which this saving truth of God was to be adjusted and applied to human need. This is the significance of his everyday words and works, and is there, can there be any other way? Strange to say, professed Christians and sincere philanthropists have been exploiting many ways, ways so far removed from the Master's, withal, that on every hand in these darkened days it is being conceded that "the religion of Christ Jesus has not even been tried as yet!" Surely such a conclusion must bring a sad and serious thoughtfulness to every man who has hoped for the world's redemption.

As Christian Scientists it is ours to be true to the Christ, Truth, and to the Master's way of proving its sufficiency to meet the human need. For us to dishonor His way of sole reliance upon God, divine Truth, for the solution of our problems, is no less inexcusable than are our assured failures in so doing. As none others, we are called and pledged to be true to the law and order of the divine appearing of which our Leader has so impressively said, "Christ's Christianity is the chain of scientific being reappearing in all ages, maintaining its obvious correspondence with the Scriptures and uniting all periods in the design of God" (Science and Health, p. 271). To be a true follower of Christ Jesus is honestly to seek and endeavor to understand spiritual truth as he understood it, and thereby do his works, his way.

"Prints of Praise"

T is related that William Prynne, the English Puritan, had It is related that william Liyane, and Libeler, for terming his cheeks branded "S. L.," Seditious Libeler, for terming indulgence in certain amusements immoral. But refusing the interpretation attaching to the torture, Prynne replaced it with one of his own, Stigmata Laudis, "Prints of Praise," and no doubt had balm for his wounds therefrom. Now Prynne's views may have been right or they may have been wrong: at least they were sprung of the stanch morality of his Puritan heart, sincere if sometimes inflexible and shortsighted. At any rate, his view of the question has of itself no more consequence than has any human view except in so far as, transformed by spiritual understanding, it aligns itself with the fact of Principle. What is important, however, is Prynne's grasp of the fact that he could turn his mourning into praise. refuse to suffer as a result of persecution, and thus rout his would-be enemies. For, what was an enemy for if not to produce the fiction of suffering? Let the torturer wield his iron: let the letters stand out upon his cheek so clear that he who ran might read; yet their imputed significance could never be the real intent of the deed that provoked the torture. In other words, the human mind can never turn good into evil merely by calling it evil. If it could, the lie about any situation would be more powerful than the truth, and the absurdity of such a belief, carried to its logical conclusions in the daily round of living, even the man in the street, who is not overconcerned about logic, can recognize at a glance.

Now Prynne himself was perhaps not much bothered about logical thinking, but, good Puritan that he was, he was immensely concerned with the letter of the Scriptures, and consciously or otherwise, he had made his own the words of the psalmist, "Surely the wrath of man shall praise thee." The "wrath" of his day might brand Prynne a libeler, but to him, guileless of malicious intent and seeking to do good in the light of the Scriptures as he understood them, brands were but "prints of praise," an indication that he was glorifying God.

The friendlessness and isolation of the Puritans in the sixteenth and seventeenth centuries, their apparent ostracism and persecution, were not peculiar to their time. The disciples of Jesus and the apostles had the same experience, for which their Master had prepared them when he preached to the multitudes on the mount: "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven." And since the Puritans, every seeker for Truth has met the persecution of the one evil for Truth's idea wherever and however manifest. It was not, then, the experience of the Puritans that makes them unique; rather was it the way they faced it, the bleakness of their thought. Cold and keen, rigid and rigorous, was their adherence to the letter of the Scriptures. Without the light and warmth of the spiritual understanding which, three centuries later, Mary Baker Eddy turned upon the Bible in her book, "Science and Health with Key to the Scriptures," they knew not how to "rejoice, and be exceeding glad." They attempted to glory in the suffering attendant on persecution, instead of in the fact of the powerlessness of suffering to affect the man in God's image and likeness. In other words, they acknowledged enemies, and had them in abundance. They saw about them the world divided into themselves, on the road to the kingdom, and the others, who, because of mistaken doctrine and worldliness were cut off therefrom; and when a man sees his neighbor as out of the kingdom of heaven he is likely to see the opposite of good, and thus he makes for himself the only enemy there is. Had the Puritan been imbued with that love for his neighbor which is the requirement of the second great commandment of Christ Jesus, he would have demonstrated the truth of Mrs. Eddy's statement in "Miscellaneous Writings" (p. 9): "'Love thine enemies' is identical with 'Thou hast no enemies.' Wherein is this conclusion relative to those who have hated thee without a cause? Simply, in that those unfortunate individuals are virtually thy best friends. Primarily and ultimately, they are doing thee good far beyond the present sense which thou canst entertain of good."

Into his "present sense" of good the student of Christian Science may look for his answer to slander or persecution. If these seem to cause him suffering, his "present sense" of good needs expansion, needs to embrace more of that infinite good which is ever present and at hand. "Now," said Paul, "is the accepted time; behold, now is the day of salvation." and he and the other apostles gave ample proof in their ministry of the availability of spiritual security, following thereby their great Teacher, as Christian Scientists to-day are learning to follow him. Matthew records that, after the healing of the man with the withered hand, "then the Pharisees went out, and held a council against him, how they might destroy him. But when Jesus knew it, he withdrew himself from thence: and great multitudes followed him, and he healed them all." This withdrawing was more than a removal of Jesus and his disciples to some spot geographically distant. It was the uplifting of thought above the acceptance of the belief of enemy; hence the quiet and the success of his escape from the Pharisees, upon whom that belief seemed to have settled. But more than this, the completeness of his demonstration of the truth about enemy was attested by the fact that the multitudes of sick and sinful beliefs that followed him were replaced by the well and the whole, the replacement which is healing. Jesus came "out from among them" and was "separate," not by protest or argument but by proof of the eternal separateness of good from evil. From the mount of practice he preached, "Love your ene-

mies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." And in so far as the student of Christian Science follows Christ Jesus' example, understanding prayer, as he is taught in Christian Science, as the desire to know God, good, he will pray for, know good for or in place of, his so-called enemies, and he will cease to suffer from so-called persecution by translating it truly into "prints of praise."

The True Incentive

EDITH A. WATTS

HE influence of Christian Science upon the thinking of to-day has produced a revolutionary reaction concerning the controlling motives in human existence that is a saving grace to those who follow its divine leadings. Prior to the advent of Christian Science, the tendency of mortal mind was to regard evil as a great and powerful enemy, whose subtle suggestions were to be resisted, either for fear of the evil consequences attending their indulgence, or in a forlorn hope of material reward for such successful resistance. It was not so many years ago that a popular debate had for its subject the following: Which is the greater incentive to action, the fear of punishment or the hope of reward? Many and varied were the heated arguments advanced by each debater, urging the relative powers of the spur whose supremacy he had elected to advocate. Through the study of Christian Science we find that these so-called motives are the ignes latui, or false influences, which have ever betrayed human action into ignoble ends. And one of the first truths revealed to our astonished thought is the unreality of evil; that it does not exist to disturb or attract a man, binding upon him untold sorrows and suffering. At most it is a false belief to be destroyed by our awakening to its nothingness, through spiritual understanding. "Evil is nothing, no thing, mind, nor power." So writes Mrs. Eddy on page 330 of "Science and Health with Key to the Scriptures," and continues, "As manifested by mankind it stands for a lie, nothing claiming to be something,—for lust, dishonesty, selfishness, envy, hypocrisy, slander, hate, theft, adultery, murder, dementia, insanity, inanity, devil, hell, with all the etceteras that word includes."

Generations of combatants have, however, waged woeful warfare against these evil beliefs, and have either capitulated to error or made show of resistance, under the false stimulus of a pitiable hope or of a dread fear of punishment, while inwardly regretting the law, "Thou shalt not." This abstinence amounts to but small gain in the right direction. Of such a combatant, resisting on a human basis, we read on page 322 of Science and Health, "A man who likes to do wrong—finding pleasure in it and refraining from it only through fear of consequences—is neither a temperate man nor a reliable religionist." And then on page 279 of "Miscellaneous Writings" is sounded the keynote of the true incentive: "Why does not the certainty of individual punishment for sin prevent the wrong action? It is the love of God, and not the fear of evil, that is the incentive in Science."

By means of this constructive teaching, one emerges from the bondage of belief in sin, and resistance to it through false stimuli, to heaven-bestowed freedom. When an evil suggestion is overcome, not because one fears it as evil, and not from a base and selfish hope of material gain, but because there is an actual preference for the harmony of good rather than the discord of evil; when one deliberately chooses, in the hour of temptation, the way of God, good, rather than the way of error,—then that man has risen above the *ignes fatui* of mortal existence, and his spiritual progress is assured.

Love of God means love of man, likewise, for did not the beloved disciple indubitably link the love of God and man when he questioned, "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" To love God more than error is to keep in the atmosphere of good, because of definite preference for spiritual enjoyment; and to love our brother more than error is to keep in the atmosphere of good, for his spiritual enjoyment and profit as we meet on life's highway.

4

Love, then, not fear, is the true incentive,—love for God and man; the actual choice of good, rather than enforced abstinence from evil; so sincere a preference for the things of God that the siren voice of error is unheard. And it is through the teachings of Christian Science that this much desired state of consciousness can be obtained. Mrs. Eddy, holding aloft the torch of truth, explains further on in the paragraph previously quoted (Science and Health, p. 327): "Reason is the most active human faculty. Let that inform the sentiments and awaken the man's dormant sense of moral obligation, and by degrees he will learn the nothingness of the pleasures of human sense, and the grandeur and bliss of a spiritual sense, which silences the material or corporeal. Then he not only will be saved, but is saved."

Whatever the form of error's temptation, the true incentive to disengage one's self therefrom is the same, and always meets with the same sure success. Christian Science, in revealing this great truth, places additional significance upon Jesus' reading of the two commandments, when he said, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbour as thyself. On these two commandments hang all the law and the prophets." To one knowing such an all-absorbing love of God as is required in the fulfillment of this first commandment, error has no attraction, for the Soulfilled thought turns naturally to God for its Life, its Truth, its Love, and is satisfied therewith. Impelled by love for one's neighbor to be ever ready, mentally and spiritually, to minister to another's needs, the earnest student of Christian Science finds that whatever might unfit him for such service becomes distasteful, and he turns from it by his own predilection.

Progressing in the study of Christian Science, we learn that love is the incentive in healing sickness and sin, as well as in all the activities that are really right. Thus we find the secret of overcoming sinful beliefs to be the actual love of good, rather than the fear of evil or hope of material gain. Divine Love is the sovereign panacea, a sure cure for any or all of the errors mentioned in the Mosaic decalogue. And when the force of this divinely impelling power, with its quieting effects, its ennobling motives, and its sure success, has once been felt in the life of the individual, he knows that both the fear motive and the base desire for reward have been permanently displaced and replaced by the true incentive, which is born of God, even Love divine, and by means of which we are animated to do the healing work of Christian Science.

Testimony Meetings

JAMES B. MERRITT

GREAT is the blessing of the verbal testimony that is given every Wednesday evening and on Thanksgiving Day in hundreds of Christian Science churches all over the world. Probably no agency devised by the Discoverer and Founder of Christian Science, Mary Baker Eddy, aside from our daily, weekly, and monthly periodicals, has done so much to spread the gospel of the new salvation, or the new understanding of

salvation, as have the weekly testimony meetings. But if the salvation of the world depended wholly on the audible prayers of Christians and the audible testimonies of Christian Scientists the millennium might be placed beyond the very farthest limit of eternity. "The inaudible voice of Truth is, to the human mind, 'as when a lion roareth,'" (Science and Health, p. 559). This is the voice that is heard in the dark corners and hidden recesses of mortal mind where lurk the most venomous reptiles of fear, hatred, ignorance, superstition, prejudice; and one of the most insidious is prejudice. The still, small voice of Truth is to the beast louder than the thunders of Jove and all the mighty rumblings of the sea rolled into one, and it alone will seal the victory over the dragon and expose its nothingness.

I always go away from a Wednesday evening service full of gratitude for the audible testimonies that have brought out new thoughts and helped me to get a little better hold on good, but the influence that is to reach to earth's farthest bounds and do its fullest share in the healing of the world is the great flood of thanksgiving and praise that goes up from the hearts of the hundreds who have been silent and intelligent listeners to every good thought brought out in the reading of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in the audible testimonies. One of the most beautiful things about the silent testimony is that it is carried on simultaneously with the audible testimony, so that the entire service is truly healing for the waiting, needy human thought.

The office of the testimony meeting as designed by its Founder is best performed, and only fulfilled, when during the full half hour allotted for testimonies and experiences both the audible and mental expressions of Truth go on unceasingly, for the effectiveness of each is dependent on the faithfulness of the other. The spoken testimony should flow freely and spontaneously, each speaker following the advice given in that section of the by-laws of the Manual of The Mother Church relating to testimonies, and especially remembering that another section of these by-laws provides for a Board of Lectureship. Frequently what should be a simple, brief recital of blessings received and gratitude expressed is extended into a lengthy discourse, possibly tinctured with personality, and consuming time that rightfully belongs to some other, desirous of casting in just a mite for Truth.

The most potent word in the English language has but four letters. Love expresses the highest attribute of God, even the divine Principle itself, and all the orthographers in the world with all the letters of the alphabet could not coin another word to take its place. Let the expression of divine Love flow from every participant in every service of the church, and no duty can be left undone, no right of others be infringed, and the healing of every discordant condition of thought will come on the swift wings of the new Comforter.

Principle and Precedent

LESTER DAVID EHMKE

IT can truly be said that the mortal or carnal mind knows nothing of either absolute Principle or precedent. This so-called mind does, however, claim to understand precedent and, to be agreeable with the capricious notion of this mind, it will be admitted that it follows precedent faithfully. In fact, there is nothing else for it to do but imitate with its shallow understanding of that term whenever it feels the pressure of Truth prodding it on. On page 6 of her sermon entitled "The People's Idea of God" Mrs. Eddy writes,

"Periods and peoples are characterized by their highest or their lowest ideals, by their God and their devil."

Now Christian Science teaches that the man God created in His "own image and likeness" was "very good." If God is wholly good, then it must inevitably follow that man is likewise. Such a man as this could surely have no devil, but the galimatias of the serpent, alias mortal mind, gradually, according to the second account of creation given in the book of Genesis, gave man a devil to fear and worship. So it is that man finds himself trying to serve two masters. This is an undertaking never known to have been consummated; therefore a man may prefer to set Principle quietly and unblushingly aside and follow precedent. Thus in this marvelous day of enlightenment and toleration we'read and hear of individuals summoned before judges and juries for having been loyal to their highest understanding of Principle, to explain why they have not bowed down to the popular devil of vaccination, for instance. In the olden days people wore amulets to protect them from evils and to ward off disease. Can it be possible that a scar on one's arm to-day is a protection to others as well as to one's self, making one immune from disease? Or are mortals still engrossed with the belief that God made them to be sick and sinning, but to foil His designs they must seek out a preventive?

That being so, nevertheless it would not be so ridiculous if the matter ended there; but mortals feel it a sacred duty to insist that their fellow men join them in this all too unconscious vicious circle, and if opposition is met with, the cry of precedent and demand of compliance with the law are raised. History indeed repeats itself. It was demanded of Jesus why his disciples did not comply with the tradition of the elders and wash their hands before eating. After pointedly rebuking those self-constituted interpreters of law and order, the great Teacher turned to the multitude and said, "Hear, and understand: not that which goeth into the mouth defileth a man; but that which cometh out of the mouth, this defileth a man." What a profound statement! Could anything be stated more clearly? Paul, coming after Jesus' time, healed the sick and sinning because he, too, understood this law, namely, that all cause is mental and not material, for he wrote to the Galatians, "Neither circumcision availeth any thing, nor uncircumcision."

Notwithstanding all this, medical bureaucracy to-day contends in vain against scientific healing methods; it is striving to reverse the law of cause and effect by doctoring the body or effect and ignoring the mental cause. Being unable to accomplish this and so compete successfully with the incoming tide of Christian Science, it is bringing to bear on courts and juries the most powerful influences of prestige and argument that it can muster. But courts are recognizing more keenly each day the law of cause and effect and are conscientiously turning away from the specious pleas of the allegorical serpent or mind of mortals in order that the establishment of precedent may be in accordance with Principle. "To say that these tribunals have no jurisdiction over the carnal or mortal mind," writes Mary Baker Eddy in her textbook, "Science and Health with Key to the Scriptures" (p. 105), "would be to contradict precedent and to admit that the power of human law is restricted to matter, while mortal mind, evil, which is the real outlaw, defies justice and is recommended to mercy."

In spite of itself practice that is absolutely unscientific is bound to fail ultimately, and for this reason it can never shake off the awful specter of theorizing. Yesterday it was bleeding the poor body; to-day it is vaccinations, serums, operations, et cetera; and to-morrow it will be something

else, all of which are the product of mortal mind. Voltaire

said. "The art of medicine consists in amusing the patient

say rather that understanding of God always cures the dis-

ease, for Christian Science declares that the imperfections

of sin, disease, and death are unknown to God, divine Mind,

and He is the creator of all, therefore they must be classified

as unrealities which can exist only in the so-called mortal

mind. It is shocking to the medical schools to have the ills

of the flesh classed as unreal, but then these schools must

answer the question why they attempt to destroy disease.

Sin and sickness, it must be thoroughly understood, are both

caused by wrong, unwholesome thinking, and are healed by

correct, wholesome understanding of man's real and eternal

On page 138 of Science and Health Mrs. Eddy writes,

"Jesus established in the Christian era the precedent for all

Christianity, theology, and healing." Christian Science in

this hour has caught his scientific method, and again the

healing power of God's law is restoring to health and holiness

the sick and sinning. It restores and heals because it sci-

entifically destroys the procuring cause, which is none other

than erroneous or unreal images of thought expressed pri-

marily in fear. The moment that one grasps the truth of

being, which is contained in the first account of creation as

related in Genesis, that moment he begins to experience the

healing method. In Science and Health Mrs. Eddy concisely

sums up the whole process of healing, when she says (pp.

476-477): "Jesus beheld in Science the perfect man, who

appeared to him where sinning mortal man appears to

mortals. In this perfect man the Saviour saw God's own

while nature cures the disease." Christian Science would NE of the many fishermen who troll for salmon off the coast of southeastern Alaska had occasion to cross Chatham Straits during a very heavy fog and found it necessary to exercise every precaution in navigating his little craft that he might reach safely the protected harbor for which he had started. To one who has never attempted to navigate a vessel in a dense fog, it would be difficult to describe the many illusions that arise to tempt him to doubt the accuracy of the compass by which he is steering. And though the fisherman knew the course perfectly, having proved it by running over it in clear weather by the same compass, he had not been under way more than one half of the allotted time before huge banks of dense fog began to appear in the forms of wooded hills, valleys, and rocks. So real did these hills and rocks seem that the temptation was very great to disregard the compass, and turn in some other direction to avoid what seemed inevitable disaster. But he knew that to reach his destination he must hold to his course, for to attempt to steer in any given direction, except by compass, is humanly most unwise in a heavy fog, and would probably terminate in the wrecking of his little craft upon one of the submerged rocks or jagged rocky reefs that are legion along the Alaskan coast; and though at times he unconsciously braced himself for the shock of collision—for could not his eyes see the hills, yes, even the trees upon the hills?—he held true to his course as directed by an unseen, yet proved power. And after having run the allotted time, he suddenly emerged from the fog and found that he had already entered the mouth of the harbor,

wherein was safe anchorage. likeness, and this correct view of man healed the sick." For This, of course, is a very common experience in certain all mankind to follow this method of healing as a true precelocalities, and yet the Christian Scientist will see at once dent would veritably demonstrate the kingdom of heaven on how perfectly it typifies his own experience since beginning earth and bring the reign of divine Principle to a people his voyage in Christian Science, wherein his compass has weary of vain theories and life-quenching fear; it would irrebeen our textbook, "Science and Health with Key to the sistibly blot from the face of the earth discord of every name Scriptures" by Mary Baker Eddy, for he, too, has proved and nature. Man has already attained this goal, for divine that it points true, and though at times evil has seemed so real as to cause him to "brace himself"-for could not his eyes see the evil?-he has shaped his course as directed by our textbook, and knows that the seeming evils were "fog." Have not many of us been piloted into the harbor of peace and harmony, even after, according to physical sense, we were already a wreck upon some "reef" and our hope of ever reaching this harbor seemed forever gone? Surely this is what our beloved Leader means when she tells us (Science and Health, p. 96): "The breaking up of material beliefs may seem to be famine and pestilence, want and woe, sin, sickness, and death, which assume new phases until their nothingness appears. These disturbances will continue until the end of error, when all discord will be swallowed up in spiritual Truth. Mortal error will vanish in a moral chemicalization. This mental fermentation has begun, and will continue until all errors of belief yield to understanding. Belief is changeable, but spiritual understanding is changeless. As this consummation draws nearer, he who has shaped his course in accordance with divine Science will endure to the end." And again on page 458, "The Christian Scientist wisely shapes his course, and is honest and consistent in following the leadings of divine Mind." Mrs. Eddy knew that it is impossible by human means to steer a true course through the fogs of material sense to the harbor of peace. Our hearts turn to her in gratitude for having given again to the world the gospel of Christ Jesus, that enables those who will to shape their course in accordance with Truth, and prove the nothingness of evil and the allness of God, good.

Security

WHEN the psalmist wrote, "Be still, and know that I am God," he certainly gave to his readers a tolerably clear warning to keep politics out of religion. It is a warning, nevertheless, which a great body of those readers have been loath to take. The reason for this is, of course, perfectly clear. They imagine, like the fly in the adage, that it is they, and not Principle, who turn the wheels of the divine mill. Thus they substitute caucusing for demonstration, and are forever shouldering their way into the limelight to steady the ark. All this arises from a total misunderstanding of the relation of man to God, Principle. Its generation is to be found in the philosophy of matter, which represents the human being as an original thinker and actor, whereas he is nothing but the subjective condition of the human mind which orders all his thoughts and actions. It is this human mind whose passions, wrought up to a certain pitch, render an explosion, in the shape of a war, an inevitability, which some king or government yields to the mesmerism of declaring, thus rendering himself or themselves servants to the suggestion which is obeyed, just as, in the same way, it is the human mind which declares a specific drug a poison, so that the individual drinking it succumbs to the poison, owing to having previously placed himself beneath the law.

Without, apparently, grasping the scientific reason for his immunity from evil, the psalmist realized that that immunity had its foundations in obedience to God, Principle. The whole Book of the Psalms is filled, from one end to the other, with outpourings of gratitude for this fact and triumphant pride in it. Later there came Jesus Christ, with his simple explanation of the truth, giving to the fishermen of Galilee and the shepherds of Judea an explanation more elaborately wrought out in Paul's teaching of the law, "I find then a law, that, when I would do good, evil is present with me. For I delight in the law of God after the inward man: but I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members." Not one of Paul's readers in Rome understood what this meant as well as he did himself. Saul of Tarsus knew all about this supposititious law in his members, which made of him a persecutor and a relier upon force: Paul the apostle had discovered what law truly was, that love was law, and that the human laws of sin, disease, and death were nothing but counterfeits of love, the law of the inward man.

The kings of this earth had built fleets, and formed armies, to protect themselves against dangers, and to become dangers in themselves. The peoples of the earth had listened to generations of astrologers and diviners, priests and healers, offering them everything, from spells and incantations to herbs and reptile-powders, for the health of their bodies. But all the time one little nation had placed reliance, against all ills, upon God, Principle, until there arose amongst them a great prophet, the man whose wonderful knowledge of Principle fed multitudes, healed the sick, and raised the dead. When, however, his secret was sought, it proved to be

no reliance on the divining power of the human mind, but a realization of the fact that God, Principle, the omnipotent power, was Love. As Paul was one day to put it, in that wonderful letter to the Church in Corinth, "If I speak with the tongues of men and of angels, but have not love, I am become sounding brass, or a clanging cymbal," and so on throughout the whole of that unapproachable passage which, in the Revised Editions, ends, "But now abideth faith, hope, love, these three; and the greatest of these is love."

The King James translators used the word charity, going back to Wycliffe in preference to Tyndale and Cranmer. The intention, of course, was to avoid the implication of sensual affection, and to obtain more nearly the equivalent of the spiritual devotion of the Greek text. The revisers evidently felt that the alteration constituted the movement known as the fall from the frying pan into the fire. No word can take the place of the word love; it is the human sense of love which must be corrected. Words have exactly the meaning that the human mind attaches to them, and as only divine Mind is capable of grasping what spiritual love truly is, it is necessarily only as the human mind vanishes before the Mind that was in Christ Jesus that the metaphysical meaning of love, as expressed in the New Testament, can possibly be understood. "Love," as Mrs. Eddy so marvelously expresses it, on page 22 of Science and Health, "is not hasty to deliver us from temptation, for Love means that we shall be tried and purified."

Once a true understanding of Love is reached, and the attempt is begun honestly to interpret and to demonstrate this understanding, the individual is on the way to the conquest of himself and of his world. The human passions begin to lie stricken before him, materiality to fade into its native nothingness, and man to appear as the idea of infinite wisdom. Then comes the perception of the utter fatuity of any effort of the carnal mind to steady the ark, and why the only activity called for from the student of Christian Science. striving to walk in the footsteps of the Christ, is to "be still. and know that I am God." The twenty-third and the ninetyfirst psalms are the very pæans of this understanding. Of the man who knows and is demonstrating his knowledge of Love, it is truly said, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." Whilst, as Mrs. Eddy has pointed out, on page 578 of Science and Health, by substituting Love for the Lord, since God is Love, the meaning of the psalmist becomes clearer than ever in the words "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for [Love] is with me; [Love's] rod and [Love's] staff they comfort me."

This is the security which comes to the individual as he divorces more and more from his consciousness the old pagan sense of sensuous love, and grasps more and more fully the Christian sense of Love as taught in the New Testament and explained in Christian Science. As it becomes more and more apparent that there is no power but Mind, it must become more and more apparent that since divine Mind is and must be Love, there is no power but Love. It was Love that stilled the tempest and fed the hungry multitude, it was Love that healed the centurion's servant, and gave the widow of Nain back her son. But the understanding of this power of divine Mind comes only with the understanding of divine Science. "Security," Mrs. Eddy says, on page 232 of Science and Health, "for the claims of harmonious and eternal being is found only in divine Science." Centuries before this the prophet Isaiah had written, "And the work of righteousness shall be peace; and the effect of righteousness quietness and assurance for ever." FREDERICK DIXON.

Spiritual Sense

one from another by supposed human limits to their functions

is a concept of hypothetical mortal mind and not the fact of

being. Even psychologists and other investigators on a

physical basis are concluding that each of these senses is

closely related to the rest, and that they all merge into a

unity of perception. A man who is considered deaf, for in-

stance, may wonder whether he hears or feels the vibration

of especially loud noises. Smell and taste, likewise, are so

connected as sometimes to be indistinguishable. Other illus-

trations could be taken from the whole gamut of mortal sense

testimony. Nowadays it is frequently argued, moreover,

that there are many more than the so-called five senses.

Some college textbooks deal with such others as a sense of

motion and a sense of heat and cold, and maintain that these

should be classified as distinct divisions. Then again, exam-

ination of the concepts that are supposed to constitute heat,

light, sound, and so on, reveals that there must be other con-

cepts which have been thus far believed to be beyond the

perception of a man's classified senses. This all goes to show

the interrelation of the mortal senses from an ordinary hu-

Christian Science shows much more clearly that true,

spiritual sense is unified and unlimited. On page 209 of

"Science and Health with Key to the Scriptures" by Mary

Baker Eddy we read, "Spiritual sense is a conscious, con-

stant capacity to understand God." There is no halfway

position between the unlimited and the limited. Either spir-

itual sense is unlimited activity comprehending Principle or

it is forever finite. Finite sense as the product of infinite

Mind is impossible. Hence the true sense, which the mortal

senses would counterfeit, is one boundless understanding of

Truth. The seeming plurality of the human senses counter-

feits the limitlessness of the "conscious, constant capacity"

which is the true idea. What the human mind calls seeing,

hearing, and so on, are just that mind's limited interpreta-

tions of the infinite idea, which is the present reality even

while human belief denies it. By understanding this true

idea as one and infinite, a man proves that it is interpreted

to him in just the way that is requisite, whether he calls it

Why, indeed, should one hear a sound instead of seeing

12:02 CT. TEE:

sight or hearing or anything else. The true interpretation

of sight or hearing, however, must be infinitely broad.

the one true Mind as producing spiritual perception, spiritual understanding, one finds the limits of the human senses

giving way and proves for himself better hearing, keener vision, and more alert discernment of the truth in every way. From a human standpoint, any one of the senses is often supposed to enlarge its activity in compensation for another that

ual sense. Each one is entitled to demonstrate for himself

divided into arbitrary parts, by mortal belief, each part

seems defective. This, however, is only a makeshift imitation of the effective replacement of false limitations by spirit-

the satisfying reality of hearing, seeing, and all perception as idea attentive wholly to Mind. This demonstration reduces to nothingness whatever obstructions mortal mind may have

The words "sight" and "hearing," rightly used, are simply names for spiritual understanding. This understand-

ing is, in the last analysis, one and indivisible. If it could be

[549]

would necessarily be limited, and thus never could be completely satisfactory. The infinite manifestation of infinite Mind may, of course, be called by all sorts of names without

the slightest alteration of its nature. The expression of divine Mind is, moreover, thoroughly specific and tangible in its

replacement of the false, human concept. Yet each one turning to Principle must find his thought constantly broadening as he appreciates more of what infinite Mind, infinitely mani-

fest, must mean. There is nothing vague about the infinite expression of intelligence; but, as Mrs. Eddy says on page 487

of Science and Health: "There is more Christianity in seeing and hearing spiritually than materially. There is more Science in the perpetual exercise of the Mind-faculties than in their loss. Lost they cannot be, while Mind remains. The

apprehension of this gave sight to the blind and hearing to the deaf centuries ago, and it will repeat the wonder."

Spiritual understanding is no more difficult to realize when it is called by one name than when it is called by another.

Immortal Mind expresses itself as infinity of spiritual ac-This true activity cannot be rightly conceived to be like any limited, human sense of things. Spiritual sense is, in fact, absolutely differentiated from any suppositional counterfeit. The genuine faculty is boundlessly varied because of its boundless source. Nevertheless, the variety of Mind manifest is not what is humanly called variableness. Spiritual discernment remains intact in the divine consciousness, without increasing or diminishing, regardless of the beliefs of mortal mind. One's entire attention should be turned away from mortal sense testimony to the wholeness of infinite intelligence, expressed as spiritual understanding. In fixing one's attention on the reality, one is not restricted to any form of words for one's reasoning, but may use whatever terms indicate the spiritual idea clearly and specifically to one's self. The true understanding is much more than human phraseology. Every glimpse of this understanding necessarily consists of the unfoldment of just so much immortal discernment. With that unfoldment, the supposed limitations of the mortal senses are, to that extent, reduced to the nothingness which they, indeed, always have been, in spite of the hypothetical mortal mind's illusions. Thus one demonstrates the difference between spiritual sense and the

+ + +

GUSTAVUS S. PAINE.

suppositional human senses.

Testimonies of Healing

I have long delayed sending my testimony for publication in our periodicals, but now feel impelled to express my deepest thanks, in writing, for this spiritual truth, as revealed by our revered Leader, Mary Baker Eddy. I have depended on Christian Science for healing for a number of years, and among other healings experienced are those of severe nervous sick headaches, and stomach and bowel trouble of years' standing.

I would also mention the healing of a daughter. About nine years ago we were on our way from Oregon to Oklahoma and stopped in California for the summer. Our youngest daughter, then a growing girl, was taken ill, and I asked for Christian Science treatment, but the case did not seem to yield right away and she became seriously ill. Her father, who was not studying Science, wished a physician called to diagnose the case. We did so and after a thorough examination it was pronounced to be Bright's disease in its last stages and a badly affected heart. The verdict was that she could only live from three days to a week. Christian Science treatment was continued, and in about two weeks she was practically healed of this trouble. Later complications set in and it was several weeks before she was healed, but there has never been a return of the disease. I have always been deeply grateful for this healing, as it was a very helpful experience in gaining a better understanding of Christian Science, and not I alone but the nurse who was with me at this time said it was a wonderful help to her in proving God's power over every material law and condition. My heart overflows with thanks to all who have helped me gain an understanding of this truth that makes free.

I am thankful to God and grateful to our dear Leader for all the good that has come to me and my family and to all mankind through Christian Science. I am also thankful for all our literature, Mrs. Eddy's great gift to the world. My sincere desire is to be a true Christian Scientist.

(Mrs.) AGNES KENWORTHY, Muskogee, Oklahoma.

٠

Having been the recipient of so many blessings through Christian Science, and of so much benefit through reading the testimonies of others, I feel it my duty as well as my privilege to acknowledge publicly through the *Scntincl* my gratitude for these blessings.

With me it was purely a case of man's extremity being God's opportunity, as I did not come into Science until I had reached the point where human help was of no avail. Since then I have been the recipient of so many blessings that it would take a very lengthy testimony to enumerate them all. However, I should like to tell of a demonstration made with our little boy when he was but six months old. On June 29, 1919, after his midday nap, my wife went into the room to dress him and when she reached his crib found that a medium sized safety pin, used to pin up one of his stockings, was missing. The stocking not being torn, it was evident to her that the pin must have been opened before being removed from the stocking. This, coupled with the fact that it could not be found anywhere in the room and that when she picked the baby up he was crying as though swallowing with difficulty, made her feel certain that he had swallowed the open pin. My wife was not a Scientist at the time and, becoming very much alarmed, telephoned for a physician, who examined the baby as best he could without any apparatus and assured her that the baby had not swallowed the pin as he was apparently not suffering any pain or discomfort. To be absolutely sure, he took the baby to another

physician, where an examination was made with the fluoroscope.

After this examination, both physicians declared that the baby had not swallowed the pin, as they could not see any sign of it. After reaching home, my wife searched every nook and corner of the room and, not being able to find the pin, was still firmly of the opinion that the child must have swallowed it although she felt slightly relieved at the verdict of the physicians. In fact, we both felt quite doubtful as to whether the doctors were right in their decision, so without saying anything to my wife, I wrote to a practitioner who had helped me before and who lived in a city about three hundred miles away, requesting him to take the case and give the child absent treatment, which he did. The baby showed no signs of discomfort until a little more than two months later, when, while changing his clothes, my wife noticed signs of a little uneasiness and upon examining him closely found that the open safety pin was just inside his rectum with the blunt end downward; she was able to remove it very easily.

In addition to being very grateful that from the time he swallowed the pin until it passed, over two months later, he did not suffer any pain or discomfort, we have often thought how grateful we are that the doctors did not succeed in finding the pin through their examination, as we shudder to think of what they might have suggested as a remedy.

This was certainly a lovely demonstration and is only one of the many blessings received through which I have been convinced of the truth and efficacy of Christian Science. Words cannot express our gratitude to God, to Christ Jesus, and to our revered Leader, Mary Baker Eddy, for this practical and demonstrable truth. We also feel very grateful to the loving practitioner through whose spiritual understanding we have been helped.

HENRY D. SARGE, Pittsburgh, Pennsylvania.

I am so grateful to God for this wonderful healing as stated in my husband's testimony, and although I was not a Christian Scientist at the time I can truthfully say I am now very eager to learn of this great truth as taught by Jesus.

Recently I have taken up the study of Science in earnest and already have been able to make some beautiful demonstrations with my slight knowledge.

(Mrs.) STELLA M. SARGE.

.

As a child my young daughter was subject to severe attacks of croup. I was awakened one night to find her choking and gasping for breath. I was at first filled with fear, as it was midnight and the practitioner who always helped us lived in another town quite a distance away. The thought came to me to read the Lesson-Sermon, which I did, and got help from the account of Jesus raising Jairus' daughter, but I dared not go over to the bed. I read the lesson through once more, and when I again came to that reference the choking had ceased; by the time I got to the end of the lesson my little girl was peacefully asleep, and the fear seemed to fall from me like a mantle. I am most grateful to God for this proof of His goodness; also to our revered Leader, Mary Baker Eddy.

I live some miles in the country and do not have the privilege of attending the Christian Science services, and seldom meet a Christian Scientist, so I eagerly look forward to the arrival of *The Christian Science Journal*, Sentinel, and Quarterly, and am most grateful for these gifts of our revered Leader.—(Mrs.) ELIZABETH GREEN HANSEN, Oakdale, California.

الخلفة

It is now over nine years since I first took up the study of Christian Science. I had heard it discussed many times but always ridiculed what I thought it to be. However, I can honestly say it was the happiest day of my life when I began to understand the truth.

I had two friends staying with me; one was a student of Christian Science, the other was not. The conversation turned to love and when I went to bed that night I kept thinking of what had been said. The thought suddenly occurred to me, and I said aloud, "If these people love one another, why cannot I do the same?" I should like to say here that my life had been very unhappy and I felt that no one cared for me or understood me, but that night I decided to put Christian Science to the test and see if it would help me to alter. The next day I shall never forget, and I think my friends noticed the difference, for I felt so happy. I soon got a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and started studying.

I have had many physical healings for which I am deeply grateful, two of which stand out in my memory,—the healing of indigestion, from which I had suffered for years, also of my eyes. I had worn glasses for a year for astigmatism; the doctor told me that if my eyes were not better in a year I would have to have an operation, but thanks to Christian Science I have been quite healed and have had no trouble for nine years. But I can never express my gratitude for the spiritual uplift that Christian Science has given me. It is teaching me to be patient and loving, which I had never been before. My daily prayer is that I may so grow in grace as to be enabled to help others as I have been helped.—(Miss) M. LILLIAN C. NOAKES, Selsdon, Croydon, England.

I am glad that I can testify to the healing power of Truth. I suffered for twenty years from bowel trouble; also from a fissure, hemorrhoids, and an abscess. All material remedies, including an operation, had failed to cure me. I went to another city to be operated on, but was persuaded to try Christian Science. I had never heard of Christian Science, but was willing to learn, and I have not only been healed of the bowel trouble but of many other discordant conditions. Through my healing, my husband took up the study, and he was healed of a stomach trouble of forty years' standing, also of a lame back, on account of which he was using two canes to enable him to walk. In a week he was going all over the farm without any cane. I hope this may bring encouragement to some one who may be afflicted as we were. We praise God for Christian Science and are thankful to Mrs. Eddy for her discovery.

(Mrs.) Mary McMakin, Dixon, Missouri.

I am very grateful to God that through His loving guidance I was led to read "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I did not read Science and Health because I wanted to or because I desired to learn anything about Christian Science. In fact, I had been convinced by false rumors about it that it was nothing that I needed or wanted. However, at a time of great sorrow, anxiety, and nervous strain, when physicians had given the verdict that my mother had but three months at the most to live, she turned to Christian Science for help. As she was able at that time to read very little for herself, I read Science and Health to her, and although at the outset I did it merely as a duty and was confident that it could not help her or be of any interest to me, I soon discovered that I was reading it eagerly, with a great sense of peace and com-

fort, and that I was finding the religion that I had been groping for and so much needed. Besides this, I saw Christian Science doing for my mother what no material remedy or treatment had been able to accomplish.

Through the understanding gained by reading Science and Health I was able to lay aside glasses which I had worn for years for muscular trouble that specialists said even glasses or an operation could never wholly relieve. Christian Science has made me understand, enjoy, and use the Bible as I never could before. It has shown me that God is a loving Father-Mother, a help and a guide in all things. I am very grateful to have found a religion which is not merely something to be believed, but which is understandable, practical, and capable of proof, a religion which can be used in every detail of daily living.

(Miss) Alma Lutz, Boston, Massachusetts.

4

I have been interested in Christian Science for several years, and during that time have had many healings, one of which I should like to relate, with the hope that it may benefit some one, as I have been benefited so often in reading the testimonies in the Christian Science periodicals. During one winter I was stricken with severe attacks of tonsillitis and grip, at the same time, and my sufferings were intense. As the condition became more acute, my mother became alarmed, and sent for a physician, and I was in such distress that I made no objection to his coming, on my mother's account; but I did refuse to take the medicines he prescribed. I had been trying to help myself in Christian Science, but suddenly decided to call a practitioner, and began treatment. The fever was allayed quickly, and within half an hour I was able to rise from my bed, dress, and sit up most of the day. The next morning I ate heartily, whereas I had barely touched a morsel of food for a week. I was soon back at my work and felt perfectly well.

This is just one of the many proofs I have experienced in the healing work. I know beyond all doubt that Christian Science heals, and is a practical help at all times. My gratitude for the benefits I have received, spiritual as well as physical, is boundless, and there is also the deepest appreciation of the Christian Science publications. It is needless to say that I daily recognize more and more occasion for gratitude to God, the "giver of every good and perfect gift," and to Mrs. Eddy for her loving service to the world.

(Miss) MARGUERITE TAGGART, Chicago, Illinois.

4

While brooding over the ills of one I hold most dear, and seeming to see only discord, I picked up a copy of the Sentinel and began to read the article, "Loving chords." Before finishing the article all sense of discord, doubt, and discouragement gave way to thoughts of hope and courage, and my heart was so filled with gratitude for the light and encouragement that have come to me through reading the Sentinel that I desire to express my gratitude that others, too, may know.

Through the work of a practitioner I got a glimpse of the truth, the desire for which has continued to grow, and many and varied have been the benefits received from studying "Science and Health with Key to the Scriptures" by Mary Baker Eddy. At one time my little daughter was taken sick with yellow jaundice, but, my husband being opposed to what he thinks Christian Science to be, I did not feel free to call a practitioner, so began to work for her with what little understanding I had. My husband said he was going to get her some medicine, so seemingly the only thing I could say was for him to get it if he felt she needed it, but that I did not think it

necessary. No more was said, neither was any medicine bought, and in a little over a week she was as well as ever and able to go on a railroad journey of several hundred miles, during the worst of winter weather, with no ill effects. During the same winter, by holding steadfastly to the truth, I was healed of influenza. For these healings I am indeed very grateful, but more so for the great lessons of love, for I am indeed learning a little more each day to love my neighbor as myself.

Again I want to express my gratitude to God, who supplieth all our needs, and to Mrs. Eddy for her revelation of Truth as given in "Science and Health with Key to the Scriptures."

Mrs. George Burns, El Dorado, Kansas.

٠

I have long wished to express my gratitude through the Sentinel for all that Christian Science has done for me. I became interested in 1905. In February, 1906, I was suffering from the belief of gas poison, having inhaled it while working at the top of a four-story building. A Christian Science practitioner was called, who took me to my home about five miles away. My wife called in a doctor, in accordance with the laws of the state in which we then lived. He said to my wife, "If you have anything to say to him, say it quickly, for he will not be alive in twenty minutes; there is no one who can cure him." But I knew of One who could and He did. The practitioner stayed all night with me and I never thought once of looking back, but kept on praying. I have also been healed of the necessity for wearing glasses.

I am grateful to God and to our beloved Leader, Mary Baker Eddy, for all the good that has come to me and mine through the study of all her writings. I am also grateful for class instruction, and for membership in a branch Christian Science church.—H. A. Leach, Kalamazoo, Michigan.

With love and gratitude I testify to many blessings which have come to me through Christian Science, and will mention one in particular for the benefit of others. My daughter and I were living alone among the hills of Oscawana on the Hudson, and one very cold day in March I was taken ill very suddenly with pain in my throat and mouth. I was unable to take food or to articulate, and knowing of no one near upon whom to call for help, my daughter wrote to a friend in New York, who is a Christian Science practitioner. She arrived the next morning, and after two treatments a substance in size and appearance resembling a small peach stone was discharged from under my tongue, and to my great relief I was healed.

For this and other benefits I am exceedingly grateful, also to all the dear friends who have so kindly helped me on the upward way.

Mrs. O. W. Leonard, Laurel, Maryland.

4

Like others whose testimonies I have read in the Scntinel, I realize how much I have been helped by reading the testimonies in this periodical and now I desire to express my gratitude through the same channel.

Christian Science has brought innumerable benefits into my life. Among other things, I have been healed of nervous sick headaches, stomach trouble, the fear of colds and sore throat, the fear of chilblains, and a great fear of being alone at night. These have all been overcome by Christian Science and these are only some of the ways in which Christian Science has helped me. Of the many blessings received I am most grateful for the spiritual uplift and for the realization that God, divine Mind, is the source of supply. I can

say with the psalmist: "Surely he shall deliver thee from the snare of the fowler, and from the noisome pestilence. He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler."

MRS. C. A. SWALLOW, Calgary, Alberta, Canada.

4

Something over ten years ago I went from Oregon to California for the benefit of my health. I was suffering from tuberculosis of the lungs, with almost daily hemorrhages, catarrh, stomach trouble, a cough, and many other ailments. I could not breathe through my nose, and my left lung was practically gone. I had the best medical aid I could get, tried Chinese herb doctors for over a year, and had an operation on my nose, but all to no avail. I could not work, and after walking a few steps would have to rest. I could only sleep while under the influence of an opiate and could not take any nourishment but milk and soft boiled eggs. The doctors finally said they could not do anything more for me. I at last turned to Christian Science and was healed. My healing was not instantaneous, for it was several years before I was healed, but during those years when the healing work was going on I was helped to understand more of the truth. I am truly grateful for Christian Science, grateful to God, and to Mrs. Eddy, who revealed the truth to us.

EDWARD A. ASHMAN, Chehalis, Washington.

4

Several times I have attempted to write a testimony for publication, but my healings, the outcome of applied Christian Science, have been numerous and varied, consequently, where to begin and where to end the testimony has been some-

thing of a problem.

Almost immediately after reading "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I began to test its teachings; that is, I began to accept, without prejudice, the wonderful explanation therein set forth of God and His idea. Many small demonstrations resulted. As I have gone on with my study of this Science larger problems have been solved, bringing with them an increasing knowledge of God. Christian Science has given me an understanding of God such as I had never hoped to have. It has healed me of catarrh, colds, toothache, and bowel trouble. It has healed me of depression and unhappiness, and has helped me financially. All my life up to the time I began to read Science and Health, I was afraid, -afraid of something dreadful happening, and I was constantly worrying about something. Christian Science has healed me of fear in many forms. These are some of the reasons why I am grateful to Mrs. Eddy for revealing Christian Science to the world.

In closing I should like to say that the literature helps me constantly. The Christian Science Monitor gives me inspiration every time I read it, and an understanding of world conditions that could never be gained in any other way. Indeed God is good.

(Mrs.) Edna Deu Pree Nelson, Oakland, California.

٠

I am indeed grateful for all the blessings I have received in the way of health, peace, and happiness. Christian Science found me a very nervous and unhappy person. I had been under many physicians' care, including specialists, for practically ten years. I was subject to hysterical spells, continual colds, and sore throat, also great pain in my side which resulted in an operation, after which I seemed to grow worse and had to close up my home for two years. Four years ago I was under a specialist's care from September until June

and was told by him that he had done all he possibly could, unless he operated. This I greatly feared. It was then that I turned to Christian Science. I went to see my aunt who is a Christian Scientist, and by my reading the Lesson-Sermon, and through her understanding of God and man's relation to Him I was completely healed in two weeks' time.

Words cannot express my deep and sincere gratitude for what Christian Science means to me. For the first time in ten years I am keeping my own little home and doing all that is required of me. I am especially grateful for the protecting and loving care that God bestows upon us. In realizing that God is the source of supply, and is infinite good, Life, Truth, and Love, I have been able to help others.

I am sincerely grateful for this healing truth, which is for all mankind, and I am especially grateful for all the periodicals established by our dear Leader.—(Mrs.) JULIA LOUISE LOOMIS, Bridgeport, Connecticut.

4

I feel I ought to write a testimony of healing in gratitude to God for all that Christian Science has done and is doing for me, both mentally and physically. It is impossible to tell of all the benefits received since taking up Christian Science over seven years ago. I am so grateful for the physical healings, but much more so for the spiritual uplifting. Christian Science enables me to see my neighbor as the image of God, and this has helped me to overcome resentment to a great extent.

Some of my healings have been instantaneous, while some have taken a longer time, and so I wish to say to those struggling with some seemingly difficult problem, Do not be discouraged. Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 410): "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." In Christian Science we learn that one disease is no more real than another and so not any more difficult to cure. I have been healed of influenza, constipation, nervousness, insomnia, liver complaint, burns, dislocated spinal vertebræ, and of many other discordant conditions. I wish to express my gratitude to Mrs. Eddy, who so unselfishly spent her life to bless mankind; also for our literature and to the practitioners who have so lovingly helped me over rough places.

Mrs. Ernest L. Swenson, Lindsborg, Kansas.

I hereby wish to verify my wife's testimony. I, too, have been benefited by Christian Science. Our baby girl was healed by the aid of a practitioner, when seemingly near death's door, of complications that set in while cutting her teeth. I am grateful for Christian Science.

ERNEST L. SWENSON.

It is with a deep sense of gratitude for the many beautiful healings I have had mentally, physically, and financially, that I take this means of expressing in a very small way what the study and application of Christian Science have meant and are proving to me daily. Within the last year both the protective and healing power of this truth has been proved in my home.

Last February my eldest son was exposed to smallpox and contracted the disease. To conform with the law of our state, a physician was called and it was five days before the health officer and physician decided that it was smallpox, whereupon my two sons, my husband, and I were quarantined. Within five days after this, the disease was entirely healed and we were all released from quarantine, the placard being on the house only five days. No sign of this disease

touched any other member of the family—and neither vaccination nor any other method of protection was used, but the application of the truth.

Another beautiful proof of the power of God was had when my younger son and his father were in the driveway pitching a baseball. My son was not looking when his father threw the ball, and it hit him in the forehead just over the left eye, making a large indentation in the skull. He has never had any other help than through Christian Science and has always been able to apply it and make many demonstrations for himself, so when this happened he did not even call me to help him, but came into the house and started to make his own demonstration, and I firmly believe he would have completed it had I not been called into the house to answer the telephone, as I was out in the front yard and did not know that anything had happened. When I came in I found my son walking up and down the room, holding his hand over his face, and repeating the Lord's Prayer, also declaring his perfection as God's child. When I asked what seemed to be the matter and he took his hand down and I could see his face. I was momentarily shocked, but immediately started to declare the truth with him. At this time his father called to me from the back porch, where he had been trying to clear his thought, to call upon a practitioner to treat the boy, and I did so to quiet our fear. One treatment was given and in about fifteen minutes I was sitting down with my son in my lap, reading Science and Health to him, at his request.

The next morning there was hardly a trace of the injury and he went to school. Within a very short time his face was normal and no one could tell that anything had ever happened. The beautiful part of this demonstration to me was the faith of this child and the way he understandingly applied the truth, not even asking for help, or calling to me. I cannot say how grateful I was to know that even though we sometimes feel that our children are not studying enough or giving as much thought to this truth as we would wish them to, they have what they have and know what they know, and can and do use it in time of need, perhaps better than many of us who really study more.

Christian Science has met our every need for over eighteen years and I could tell of many more beautiful proofs and of many ways besides physical healing in which it has never failed when properly and earnestly applied, but I am most grateful of all for the absolute confidence and assurance I have that God does indeed heal all of our diseases and forgive all of our iniquities. I am grateful for all the loving help received, and for every channel which God has provided, through our Leader, Mrs. Eddy, whereby this priceless truth is reaching all mankind to-day,—for our periodicals, reading rooms, lectures and services, and for all of our Leader's works, which each student should be provided with, in order to drink of the fount through which this living water flows.

(Mrs.) IDA ALLYN, San Jose, California.

It is with a feeling of deep gratitude that I give this testimony of my healing through Christian Science. I was taken very ill with influenza in March, 1920. The fever was very high, and the internal pains very severe. With the help of a practitioner my healing was wonderful, and so quick that I was able to sit up on the third day, and on the fourth day I was quite well. I was also healed of measles about four years ago. This was also met very quickly with the help of the same practitioner. I am truly grateful for all that Christian Science has done for me and I thank God for all the blessings I have received.

(Miss) Laura Miles, Great Malvern, England.

Signs of the Times

["The Valley of Baca"-The Christian Science Monitor, Boston, U.S.A., January 13, 1921]

When Charles Dickens drew the character of Mark Tapley, who was always looking for a condition sufficiently dismal and uninviting to enable him to "come out strong," but who invariably found that his own kindly disposition changed every depressing circumstance in which he found himself into an agreeable one, he may have caught some glimpse of what the psalmist meant when he wrote, "Who passing through the valley of Baca make it a well," or, as the Revised Version gives it, "Passing through the valley of weeping they make it a place of springs." Human history abounds with instances of men and women who, when conditions seemed hopeless and every one around them had yielded to the mesmerism of depression, or even of despair, have manifested a faith and courage so sublime that it has saved the entire situation. Indeed, it may be said that the test of an individual's unselfishness is his ability to change the valley of Baca into a well, for this implies some understanding of what the Master meant when he said, "The water that I shall give him shall be in him a well of water springing up into everlasting life."

One of the great blessings which Christian Science is bringing to mankind is just this ability to transform the valley of weeping into a place of springs. The temptation, of course, always is to sit down in the valley, to pitch one's tent there and yield to the mesmeric suggestion of grief and loss. But the psalmist said that the man whose strength was in God would pass through the valley, and that in his passing he would make it a place of refreshment and inspiration. On pages 149 and 150 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy, the Discoverer and Founder of Christian Science, writes, "Remember, thou canst be brought into no condition, be it ever so severe, where Love has not been before thee and where its tender lesson is not awaiting thee." What a comforting thought is this! Whether the circumstance be what human sense terms trivial or overwhelming, he who has come into touch with Principle perpetually proves that every valley experience can be made a cause of rejoicing.

This, of course, is because such a one has the springs or well of water within himself. In other words, he knows the Christ, and because of this he is able to transform the valley of weeping into a place of joy not alone for himself but for others. How often has one sentence from the Bible or from the textbook of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, changed the valley of Baca into a well. Perhaps it may have been the valley of the shadow itself apparently enveloping some little child, and then through Christian Science treatment, which is simply the prayer of spiritual understanding, the dark dream has been dispelled, and with the morning light the springs of water have gushed forth, springs of joy and of gratitude to God, to Principle, the ever presence. It is not possible that any one who has passed through such an experience can ever forget it, for in those moments he touched reality and trod on holy ground.

All this, however, has nothing whatever to do with the human expedient known as making the best of things. The man who merely makes the best of human conditions probably accepts evil as real, and simply endures with what cheerfulness he may what to him is a very hard and real experience. Christian Science demonstration is not stoicism or endurance, either heroic, cheerful, or dismal. It is the wiping out in

some degree in human consciousness of the false sense which claims to be aware of something apart from and contrary to the nature of God. It is the replacing of fear with love. It is the dawning of reality replacing mortal thought, in the radiance of which one discerns the fact that evil with all its phenomena of sin, disease, and death is unreal, because the Mind which is God and which is wholly pure and good never could have conceived of nor created it. The very first perception of this fact has often changed the valley of Baca into a well. So-called incurable disease has frequently yielded instantly upon the realization that evil is no part of the divine knowledge or plan, and therefore is wholly illegitimate. The ability to exonerate God, as it were, from all participation in or responsibility for evil is in itself healing. Indeed, it seems as if a load had slipped off one's back when he perceives that evil has neither source, law, authority, nor power. This enables him to walk through the valley experiences with steadfast step, knowing that the springs of refreshment and healing are right there, and that their source is infinite Love. It is only the false sense of self, self-pity, and self-indulgence, which would linger weeping, and is unaware of the springs of heavenly inspiration all around. He who through his understanding that life, health, and substance are not in matter to be lost, passes through the valley experience with unfaltering step, is helping to free the whole creation.

Never in human history has the world been called upon to face the valley of Baca as it has in the past half dozen years; and how one has passed through it is determined wholly by his understanding of Principle. The world has always looked with wondering eyes on those who, like Paul, have "suffered the loss of all things" and yet can say, "I have all things and abound" (American Revised Version) because the secret source of joy and gladness is not perceivable by the unenlightened mortal mind. But to the man whose "life is hid with Christ in God" the source is plain and the healing springs are available. On page 596 of Science and Health Mrs. Eddy defines the term valley, thus: "VALLEY. Depression; meekness; darkness. 'Though I walk through the valley of the shadow of death, I will fear no evil.' (Psalm xxiii. 4.) Though the way is dark in mortal sense, divine Life and Love illumine it, destroy the unrest of mortal thought, the fear of death, and the supposed reality of error. Christian Science, contradicting sense, maketh the valley to bud and blossom as the rose."

[From The Kansas City (Kansas) Times]

That Christian Science as a matter of education has accomplished great things and that its teachings have gone far toward relieving sickness and unhappiness in the world, was the assertion of the Reverend G. Franklin Ream, pastor of the Washington Boulevard Methodist Church, Kansas City, Kansas, in an address last night. "Aches and pains and grouchy dispositions have been done away with when a little Christian Science teaching has been practiced," declared Mr. Ream.

[From The Pioneer]

Dr. Alexander Lambert, of New York, the leading medical authority on methods of curing drug addiction, said that the great public health problems of narcotism center now around the cocaine and heroin addicts, who constitute nearly four-fifths of all addicts. He said that heroin is an unmitigated curse and there is no medical need for it. Of all taking part in the discussion, Dr. Lambert was the only one to advocate going to the root of the heroin trouble by prohibit-

Ė.

ing utterly the traffic in this most destructive drug. It is encouraging to know that in this he has the support of the Committee on Narcotics of the American Medical Association.

The Journal of the American Medical Association in its issue of December 11 said: "Clinics conducted by the narcotic division of the Bureau of Internal Revenue, through which agency several thousand drug addicts were examined, revealed no evidence of an increase of the narcotic habit since prohibition went into effect."

[From The Times, London, England, as Quoted in The Living Age]

Opinions may differ as to the reason for the increased interest taken in late years, not only in academic circles, in the English language as it is spoken and written. The war may be named as one reason of this interest; the incursion of American words; the spread of popular education and the popular newspaper, both instruments awaiting the manipulating hand; the phonetic spelling movement, which is even more a cause than an effect of investigation. The fact remains. We have before us two tracts and a prospectus which give evidence of the attention which is being increasingly devoted to the English we actually use; to its present character, its future development, and the possibilities of beneficent interference with it. This awakening is very welcome.

[From The (Phoenix) Arizona Republican]

Reorganization of the Arizona Public School Protective League, a state-wide society formed for the purpose of keeping compulsory medical examination and treatment out of the schools, has recently been effected in Phoenix by members who were active two years ago in the crusade against compulsory vaccination of school children. . . .

A revival of the Protective League was considered necessary by local parents and others interested in keeping compulsory medical treatment out of the public schools, owing to the fact that legislation has been mentioned by officers of the state for a more widespread medical service in the schools.

[Interest in Disarmament]

In a recent editorial in The Christian Work there is an editorial entitled "The Sudden Interest in Disarmament" which reads in part as follows: "We say sudden because, while there has been spasmodic interest in the question during the years before the war, and quite an agitation to consider its possibility at the time of calling of the Hague conferences, there has never been anything like the widespread, popular, and spontaneous interest in it that has suddenly manifested itself. Neither is this interest confined to the United States. Every day there are reports of utterances by statesmen, extracts from editorials, and resolutions from conferences cabled from Great Britain. In our own country one great daily, The World of New York, is devoting a full page daily to the discussion of the question, while all papers and magazines are having something to say. The Church Peace Union has just established a strong commission to study the whole situation. Gen. Tasker H. Bliss and General Pershing have recently made most emphatic utterances against continuing the policy of increasing armaments.

World Friendship, the publication of the American Council of the "World Alliance for International Friendship Through the Churches," remarks: "It is one of the significant signs of the times how all the world has begun talking about disarmament."

"Our truest line of safety," says The Spectator (London, England), "is to do the handsome thing, the trusting deed,

the act of good faith-to prove by a beau geste that so far as we can bring it about we intend that the world shall be conducted through the association of nations. So far our hands are clean, for we have not laid down a single ship since the end of the war. Mr. Long has also said the right thing, though he did not, to our thinking, say enough. He pointed out that Great Britain once had a three-power standard, that she then dropped to a two-power standard, and that now she aspires to be no more than equal in strength to the navy of one other great power. . . . We are delighted to see that the Navy League, in a New Year's message to the nation, has had the insight and the courage entirely to recast its policy. . . . Now the Navy League declares that the only proper policy for Great Britain is to join with the United States in policing the seas and in framing a sane naval policy for the world."

[From "A Parish Minister's Declaration of Independence," by Willard L. Sperry, in The Atlantic Monthly]

Why does not the average man go to church? Being a teacher in a theological school as well as a parish minister, I sent out spies into the great and wicked world last year to get an answer to this question. Effectively disguised in mufti, they approached the average man and asked him for an honest answer. They came back to the camp and reported with surprising unanimity that, among other things, the average man was getting tired of going to church to worship God and being offered the trichina and Senegambia as a substitute. One average man said quite bluntly that fourteen Sundays at the height of the season had been wholly taken up in his church by the presentation of fourteen different denominational and social causes, and that he found his inclination to go to church suffering a sea change. Not that trichinosis and Senegambia were "dead hypotheses" to him. He took an interest in these and all other similar moral opportunities. But their name was legion; and any selection of them for the purposes of public worship was arbitrary. . . . Religion, as the average man saw it, was just the power to say "God," where the rest of the world said Nature, Justice, Duty, Peace, Social Service, Foreign Missions. And it seemed to him as he reflected upon it, that the church was missing its chance to help him say that thing. . .

The parish minister insists upon some restoration of his ancient liberty of prophesying, not because he is indifferent, or wishes his church to be indifferent, to any and all of these claims on time, thought, service, and money, but because he feels the danger of religious shortsightedness, and even of fanaticism, in the urgent clamor of these many voices. He believes that, if men can be helped to true and adequate . ideas of God, godly men, to whom the task comes immediately home, will dispose of trichinosis in due time, and will maintain all other valid causes outside the church and inside. But he fears that, if men lose the idea of God, and forget how to practice the presence of God, the trichinæ will multiply and the sects will indeed collapse, because the ruins will have been emptied for good and all, as the result of a fundamentally shortsighted conception both of the Christian church and of the parish ministry.

4

[From an Introduction to a Christian Science Lecture, in Jacksonville, Florida]

A few days ago the world paused in its labors to follow the Wise Men to the manger, to worship the Bethlehem babe. But even while repeating with its lips the words of the angelic host, "On earth peace, good will toward men," the world sadly knew, in its heart, that there is hardly a place where, to human sense, there is peace on earth or good will

to men. In the midst of this seeming discord, the aftermath of war, that darkens the whole world, Christian Science declares to earth continuously the message of the angels, assuring mankind that the remedy for every human ill is to be found in the Bible. And Christian Scientists are proving that the right understanding of God and man which Jesus came to teach and to demonstrate is the power that to-day heals the sick, reforms the sinner, and reveals the reign of peace.

Christian Scientists are gaining this understanding through the study of their textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. Even the humblest student of this Science is finding each day just the help he needs for whatever problem the day may bring. He is finding health, harmony, happiness, and peace, just in proportion as he can realize the omnipotence and omnipresence of God, who is Love. Gratitude for this newfound understanding creates a desire to share it with all the weary and heavy-laden of earth who need its gentle comfort.

[From a Letter in The Decorah (Iowa) Journal]

Time makes a lot of changes in our views. Instances: the luxury tax now in force makes one wonder, sometimes, just what luxury is. Take the bathtub. The State of Virginia laid a tax of \$30 a year on all bathtubs in 1843. But while pursuing the history of bathtubs, some other wonderings are raised. One wonder is, just how much does the medical fraternity know about what they are talking about when they have laws passed forbidding new methods of healing. The medical fraternity denounced the bathtub as dangerous, in 1842, the year the first one was built, and said they were bound to result in . . . the whole category of zymotic diseases. As a result of pressure by the medical fraternity the Philadelphia council in 1843 considered an ordinance prohibiting bathing between November 1 and March 15. And in 1845 Boston made bathing unlawful except on medical advice. Now, some seventy-five years later, bathing is not considered a serious calamity, and it is possible that many of the things the medical fraternity objects to so strenuously now may not be considered objectionable in another three-quarters of a century.

["Bible Criticism for the Plain Man," an Address by Canon Barnes, as Reported in a Letter by Albert Dawson, London, England]

The Religious Thought Society does useful work by giving quiet people an opportunity of hearing at small gatherings qualified speakers discuss important themes. "Gospel . Criticism for the Plain Man" was the title of an address on December 3 by Canon Barnes. While the processes of scholarship will, he said, never create faith . . . yet the results of sane Bible criticism are of importance to those who wish to have an intelligent foundation for their religious beliefs. If established results were generally accepted, eager partisans in current religious disputes would find some of their favorite weapons blunted, and thereby the cause of Christian reunion would be advanced. But no effective use can be made of this new knowledge until the plain man, the ordinary woman, the Christian in the pew, accepts it. These people must be helped to see that we now know Jesus and the content of his teaching with a new certainty, that the Lord's human and spiritual greatness are revealed as never before; while at the same time we can trace in the gospels the growth of that human element which is the source of most of our present unhappy divisions.

Dr. Garvie, Principal of New (Congregational) College, a cautious scholar, agreed with all that the Canon said, con-

tending that instead of religion being in any way impoverished by the results of modern scholarship, it was relieved of
accretions trying to faith. Unreasoning traditionalism was
responsible for a great amount of atheism and scepticism.
When modern methods of scholarship are applied, those
things that divide Christendom most are found not to belong
to the authentic message, the original revelation of Jesus
Christ, but are later developments. The Dean of St. Paul's
associated himself with the previous speakers. "Here," he
said, "you have three church dignitaries, with characters and
reputations to lose, who are willing to accept the conclusions
of modern criticism with regard to both the Old and the New
Testaments. Ten years ago it would have been impossible
for them to do that." It was an unmixed gain, he declared,
that at last their tongues were loosed.

[J. Lewis Paton in "Essays on Vocation"]

One might go so far as to say that the real reward of teaching is proportionate not to the amount of effort we put into it, but to the joy we take in doing it. The perfunctory teacher who goes about his duty in the same way as a postman goes his rounds, just "delivering the goods as per contract," without any music in his heart, and therefore without any of the finer touches which make toward perfection, may be a fine model of Stoic virtue, in fact the more the work is against the grain the more highly is he to be praised qua Stoic, but as a teacher he is naught. . . .

In any club for lads or girls, in any Sunday school or adult school he will find out whether he is working along the line of his natural endowment or no. If he is, each attempt corroborates his assurance. But it must not be assurance of self,-that may suffer some rude shocks,-but assurance of God; that will stand anything. Paul speaks of himself as "an apostle of Jesus Christ through the will of God." . . . The love of Christ constrains him, not his gratitude for Christ's love, nor his own joy in it, but Christ's love working as an irresistible force in and through all the powers and faculties of his life, God's will acting upon him by immediate contact. That was the fact of which he was sure. His sureness of it made him proof against all outward perils and hardships, and-still more wonderfulagainst all inward questionings and the scruples of selfdiffidence. .

To have this sense of vocation is to be immune to that haunting sense of unrest and discontent which is the disease of modern times. We have lost our confidence because we have put our faith in ourselves. The man who puts confidence in himself is easily upset. Any outward rebuff, or slight, or disappointment, disconcerts him. Any new opening may allure him. . . . Either God called me to this work or He didn't. If He called me, the responsibility is His. The ambassador has no meaning apart from the king who sends him. I have no meaning apart from Him who sent me.

[From The (Seattle, Washington) Post-Intelligencer]

The year 1920 was the healthiest since Manhattan Island was taken over from the Indians. This statement, made to-day by the New York health department, is backed by statistics showing fewer deaths and more births in the metropolis during the past year than in the one preceding. Furthermore, only 176 persons were sent to the workhouse during 1920 for intoxication, as compared with 429 in 1919, 664 in 1918, 1567 in 1917, 2361 in 1916 and 4926 in 1915. The inability of the government to enforce the Volstead Act with sufficient vigor to bar out all

imports of intoxicants or to suppress manufacture and sale of the stuff manufactured in this country attracts a great deal more popular attention than facts and figures showing a decline in the consumption of liquor. Nevertheless, statistics such as those made public to-day at New York, which could be duplicated by any other city in the country, conclusively prove that even "partial" prohibition pays.

[From "The Place of Woman in the Church," by Robert Leonard Tucker in The Biblical World]

To conceive of the place of woman in the church as static-incapable of change-is a dire calamity. . . . Nor can the animosity displayed against the church, not only among the literati but also among the socially radical and religiously unorthodox, be allayed till woman be given her rights. A church flouting by either practice or form of government the democracy she so loudly proclaims, commands no deep respect. Permanent fettering of woman but adds fire to the flame of distrust already burning. Much lost sympathy between the masses and the church could perhaps here be restored. Far more impressive would be the pronouncements of the Federal Council of Churches against social and industrial unrest, were there a larger representation of women on its committees. A church indifferent to woman representation cannot preach loudly of "liberty, equality, fraternity." Ideal society includes each member of the family group. The strength of the church is in most satisfactorily presenting this ideal to an imperfect world. It includes the whole family. It exists not for men alone as does the Y. M. C. A., nor for girls exclusively as the Girl Scouts, but equally for all. To keep woman in a place of second rating breaks its power with true democrats and serves to weaken its claim.

[From an Address of Rev. J. G. Barry, D.D., to the Churchwomen's Club of Columbia University, as Quoted in the Boston Evening Transcript]

"There is a common notion," said Dr. Barry in the college chapel, Wednesday, "that a consistent Christian must abandon all pleasant things, that he must think only about sin, sacrifice, and death, and that he must take over a long list of uninteresting occupations. The Christian religion thus appears sometimes as a kind of kill-joy. This presentation, largely false, has its element of truth. We must face the fact that religion, which is not a mere by-product of life, does demand time, attention, sacrifice. But is that any objection to it? Patriotism also demands energy, money, and in the last resort life itself. Sacrifice is natural in all public obligations. Those who follow music, art, or language know sacrifice. Is it unreasonable that religion, the highest pursuit, should make demands of which we shouldn't complain in a case of learning to play the fiddle? The searching demands of religion should commend it.

"It certainly is not true, however, that religion interferes with life's worthy aims and hearty enjoyment. A sect here and there may proscribe dancing and card playing in the name of 'giving up the world;' but money-grabbing and other forms of the worship of mammon that is the essence of worldliness may flourish where dancing and the theater are forbidden. If Christians are dyspeptic and depressing, something is the matter with their religion. Gayety remains an attribute of sanctity, even though large numbers have made religion a perfunctory thing or taken it as a last resort, life's pleasures failing.

"Religion is the supreme joy, that which makes life tolerable. This appears in the ancient association of Christianity with a great source of joy, beauty. If we were asked to

give some idea of heaven, many of us would describe it in terms of the intellect, in some form of service. But John looks into heaven and translates it purely in terms of beauty. . . . The overshadowing conception of duty that never gets beyond the sense of oughtness bores us and bears us hopelessly down. It is not so much that we ought to do God's will as it is that fullness of life comes through the action, because thus we are reaching God and He is reaching us. Religion is intended to impart joy not only to saying our prayers but to studying mathematics or raking up the lawn. . . . You cannot get joy out of any selection of the facts of life. Joy is the result of a union with God."

[From an Editorial in The Evening Gazette, Reno, Nevada]

The wave of interest in psycho-analysis that has been slowly moving over the United States for several years has developed to an actual tidal wave on crossing the Atlantic and descending upon England. Social conversation is interlarded with the professional jargon of psychology, and even school children chat about "complexes" and the Freudian "wish." Coincident to this fad, hypnotism is enjoying a revival, and recently a psychologist of importance was showing at the London zoological gardens that a lobster could be mesmerized. One of these shellfish by a few passes along its back was induced by the operator to stand on its head for five full minutes, which leads a London paper seriously to suggest that oysters may yet be hypnotized into opening their shells without the use of force.

A Lesson-Sermon is given twice a year in Christian Science churches, entitled "Ancient and Modern Necromancy, alias Mesmerism and Hypnotism, Denounced," that those who are interested in psychology might listen to with profit to themselves and advantage to their unfortunate subjects. One does not have to be a believer in Christian Science to benefit from the lecture, either. It simply inculcates good Even professional practicers of psycho-analysis, trained medical men, consider the hypnotic process dangerous for amateurs, as it involves the complete surrender of one's mind to the temporary control of another.

Church Notices

4 4 4

BOSTON, MASS.—The First Church of Christ, Scientist. Sunday services, 10:45 a.m. and 7:30 p.m.; Sunday school, 10.45 a.m.; Wednesday evening meeting, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading rooms: Little Building, corner of Tremont and Boylston Streets (fourth floor); open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. National Union Bank Building (seventh floor), 209 Washington Street, opposite old State House; open daily, except Sunday, from 9 a.m. to 5.30 p.m. Massachusetts Trust Company Building, 236 Huntington Avenue; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 7 p.m.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to EDWARD L. RIPLEY, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

*** * ***

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size 8½" x 10¾". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to In-

tervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at one hundred dollars each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

Orders for Pacific Coast and Rocky Mountain States

In order to facilitate the filling of orders for the Pacific Coast states and to expedite delivery, orders and remittances from reading rooms and individuals in the five postal zones east of San Francisco, with the exception of orders and subscriptions for *The Christian Science Monitor*, *Journal*, *Science*, *Quarterly*, and *Heralds*, should now be sent direct to The Christian Science Publishing Society, Pacific Coast Depot, 255 Geary Street, San Francisco, California.

The Pacific Coast Depot will continue to handle subscriptions and supply periodicals only to San Francisco and immediate vicinity.

The first five zones east of San Francisco include all of California, Oregon, Nevada, Washington, Idaho, Utah, Arizona, and approximately all points west of Billings, Montana: Cheyenne, Wyoming; Denver, Colorado; and Las Vegas. New Mexico, including these cities. The local post offices in the last four states mentioned will supply further information regarding the fifth zone limit.

The above notice does not apply to Canadian territory.

European Orders for Bibles

The arrangement of the Publishing Society, whereby the Christian Science reading rooms in Great Britain and Continental Europe have been accustomed to order Bibles directly from the Oxford University Press, London, sending payment for these orders to The Christian Science Publishing Society in Boston, has been discontinued, and these reading rooms are now requested to send their orders accompanied by remittance to the London office of The Christian Science Publishing Society.

The Oxford University Press will henceforth fill for the Publishing Society only those orders received through our London office. Address all such orders for Bibles to The Christian Science Publishing Society, Amberley House, Norfolk Street, London, England.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlet in Russian

There is now on sale a new Russian translation of "Christian Science: Its Advantage to Mankind" by Edward A. Kimball, with alternate pages in English. Price 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S. A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U.S.A.

[558]

Letters of Appreciation

Many letters of appreciation of The Christian Science Monitor and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading.

133.1 15 Within three or four weeks' time I expect to leave for soviet Russia, and, desiring to be able to receive the Monitor while there, I would appreciate any information from you as to the avenues that are open to me to satisfy my desire, in view of the nonexistence of postal communication yet between this country and soviet Russia. Indeed, I do not share the Monitor's attitude toward soviet Russia, but, like thousands of others who have by now learned to read between the lines of newspapers, I class the Monitor. . . . as the most valuable organ of information, regardless of its prejudices.

Second:

Of all the daily papers which come to our table The Christian Science Monitor is among the best. Its last page is equal if not superior to any, in its excellence of the subjects treated.

Third:

May I take this opportunity of expressing to you and your associates the deep appreciation of the Committee of —— for the splendid publicity which you have given to our work from time to time? It is indeed a pleasure to read a daily newspaper that opens its columns to all that is worth while, and the policy which is pursued by The Christian Science Monitor certainly commends itself to other newspapers seeking to serve the people as an avenue for intelligence and greater understanding of our common interests.

WORKS ON CHRISTIAN SCIENCE

Written by MARY BAKER EDDY, Discoverer and Founder

of Christian Science and Author of its Textbook

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only textbook on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each \$3.00; twelve or more, each \$2.75. Ooze leather, vest pocket size, single copy \$3.00; twelve or more, each \$2.75. Morocco, vest pocket size, single copy \$3.50; twelve or more, each \$3.25. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy \$4.00; twelve or more, each \$3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$5.00; twelve or more, each \$4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy \$6.00; twelve or more, each \$5.75. Large Type Edition, designed especially for the use of First Readers. Large Type (18-point) on Warren's heavy India Bible paper, bound in leather. Size 8 by 1034 inches. Single copy \$7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

FRENCH TRANSLATION. Alternate pages of English and French. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

GERMAN TRANSLATION. Alternate pages of English and German, Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in The Christian Science Journal from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in The Christian Science Journal and Sentinel, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy \$3.50; six or more, each \$3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy \$1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy \$2.00; six or more, each \$1.75.

German Translation. Alternate pages of English and German.

Cloth, single copy \$1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science: its fundamental idea and growth. Library edition, cloth, 95 pages, single copy \$1.00; six or more, each 75 cents.

Unity of Good. This book lays the ax at the root of error. elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy \$1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy \$1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, alias Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges,

single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point, American Braille, and English Braille systems of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Rudimental Divine Science and No and Yes. In one volume, French translation, with alternate pages of English, vest pocket size. Blue cloth, gray edges, single copy \$1.25; six or more, \$1.10; blue leather, gray edges, single copy \$2.00; six or more, \$1.75 each.

Messages to The Mother Church. volume, 94 pages, Christian Science versus Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy \$1.50; six or more, each \$1.15.

Christian Science versus Pantheism. Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more,

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

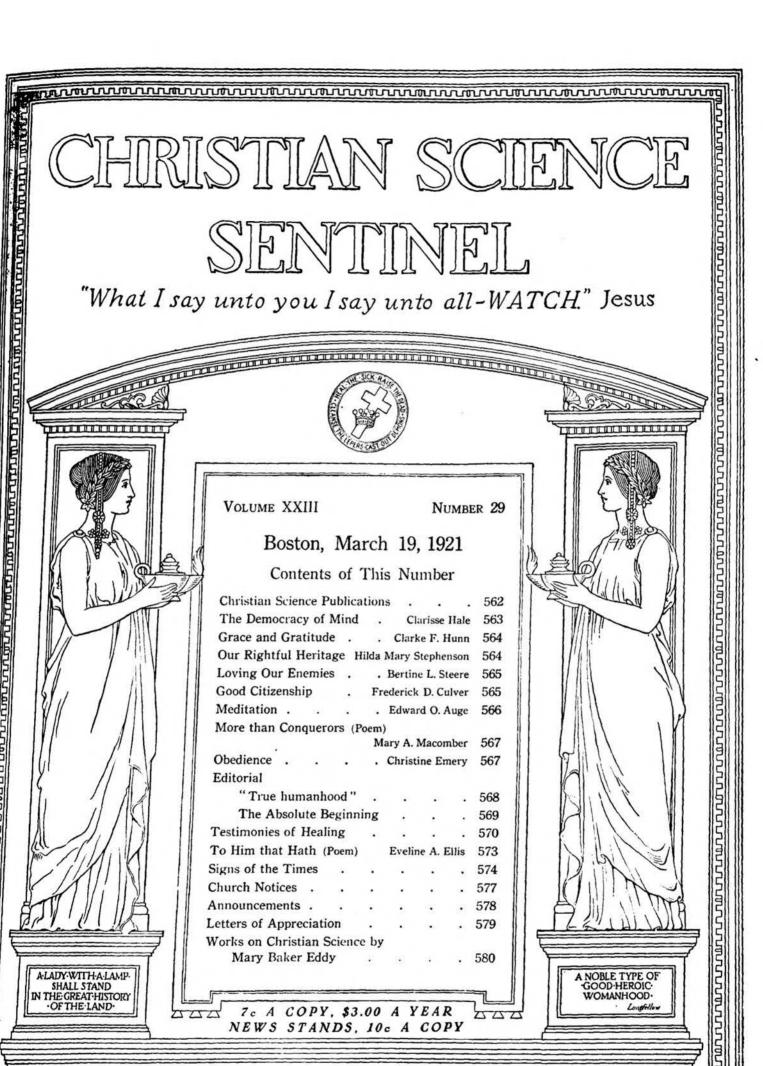

This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy \$1.50; six or more, each \$1.25. Published also in morocco, limp, round corners, pile edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign. Address orders and make checks payable to

Christian Science Literature

"Science and Health with Key to the Scriptures" and all other published writings of Mary Baker Eddy are listed on the outside back cover page of this Sentinel.

Christian Science Sentinel

Established, 1898, by Mary Baker Eddy. Published weekly, containing articles, editorials, and special current information regarding the Christian Science movement, also testimonies of healing. Subscription price, payable in advance, postpaid, to all countries: One year, \$3.00; six months, \$1.50; three months, 75 cents; single copy, 7 cents.

The Christian Science Journal

Founded, 1883, by Mary Baker Eddy. This monthly magazine is an official organ of The First Church of Christ, Scientist, in Boston, Massachusetts. Contains articles, editorials, and testimonies of healing, a directory of Christian Science Churches, Societies, and Reading Rooms; also in the January, April, July, and October issues a list of Christian Science Practitioners and Nurses. Subscription price, payable in advance, postpaid to all countries: One year, \$3.00; six months, \$1.50; three months, 75 cents; single copy, 30 cents.

The Christian Science Quarterly

Founded, 1890. by Mary Baker Eddy. Published January, April, July, and October. Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. Printed in English, English-Dutch, and English-German. English edition published also in vest pocket size. Subscription price, payable in advance, postpaid, to all countries: One year, \$1.00; single copy, 25 cents.

The Christian Science Monitor

An International Daily Newspaper. Founded, 1908, by Mary Baker Eddy. Daily, except Sundays. Its own world-wide news service is supplemented by the service of the Associated Press and of the United Press Association. Complete in its departments; unique in its Home Forum page. Full page of editorials dealing truthfully and fearlessly with vital questions of the day. Subscription price, payable in advance, postpaid to all countries: One year, \$9.00; six months, \$4.50; three months, \$2.25; one month, 75 cents; single copy, 5 cents.

Le Héraut de Christian Science

Established, 1918. A periodical published monthly in French, with alternate pages in English, containing articles and editorials on Christian Science, and testimonies of healing. Subscription price, payable in advance, postpaid to all countries: One year, \$2.00; six months, \$1.00; three months 50 cents; single copy, 20 cents.

Der Herold der Christian Science

Authorized, 1903, by Mary Baker Eddy. A periodical published monthly in German, with alternate pages in English, containing articles and editorials on Christian Science, and testimonies of healing. Subscription price, payable in advance, postpaid to all countries: One year, \$2.00; six months, \$1.00; three months, 50 cents; single copy, 20 cents.

Subscriptions will begin with the next issue after the receipt of the order. Information regarding bound volumes of the weekly and monthly periodicals will be given upon request.

NUMBER 29

The Democracy of Mind

CLARISSE HALE

NOW that so much is thought and talked of the world being made safe for democracy, it is interesting to analyze just what is meant by such an assertion and by what methods the task may be accomplished. Pure democracy is unknown to the governments of the world to-day, although it may be found, in very nearly the exact expression of the word, in some of the cantons of Switzerland, and in certain New England townships. All students of history know that the word democracy derives from the Greek and means "rule by the people." In its Greek form, democracy originated as long ago as 594 B.C., when Solon, known as the founder of Athenian democracy, drafted laws by which he established a new code of equality for the people. At one time democracy was defined as mob rule or rule by the masses, a definition that has not been able to stand the test of time because such a classification fails entirely to take into consideration intelligence, and implies a rule by mere numbers, that utterly disregards the power of right idea.

With the passing of years, which is in reality the unfoldment of eternity, any conception of government undergoes a change, and it is not until democracy is seen as government by the one Mind that opposition to government will cease. The establishment, without contravention, of the rule of Mind and its expression, to be effective must be accomplished not by the sword or any human agency but through education in its highest sense. The phrase, making the world safe for democracy, generally conveys to people the thought that through the unrivaled prestige of those nations most nearly approximating individual freedom, the ideal of democratic government may be assured of never being overthrown by an attack of autocracy in any form of limited human control. And this is undeniably true, for the nations most nearly exemplifying the democracy of Mind can never be destroyed; the truth that they express is the power of spiritual idea against which the aggression of so-called reactionary forces is entirely futile. The machinery of government may be needed, but when recognized as the activity of Principle, it can never tyrannize, it can never crush out liberty of thought and action, it can never be other than truly democratic.

In "The First Church of Christ, Scientist, and Miscellany," beginning on page 246, Mrs. Eddy gives a definition of pure democracy which is applicable for all times and circumstances, and which, seen in its metaphysical aspect and demonstrated, will prove the millennium at hand: "The Magna Charta of Christian Science means much, multum in parvo,—all-in-one and one-in-all. It stands for the inalienable, universal rights of men. Essentially democratic, its government is administered by the common consent of the governed, wherein and whereby man governed by his creator is self-governed. The church is the mouthpiece of Christian Science,—its law and gospel are according to Christ Jesus; its rules are health, holiness, and immortality,—equal rights

and privileges, equality of the sexes, rotation in office." This quotation is familiar to all Christian Scientists and is their ideal of democratic government—government "by the common consent of the governed," in other words, the consent of all those subject to the government. No one can be governed without his consent, a fact clearly recognized by Paul when he warned his hearers that they would be servants of that to which they yielded obedience, whether of sin or of righteousness. It is only the yielding obedience or consenting to the suggestions of error that allows the individual to be overwhelmed and controlled by the autocracy of sin and disease or false belief in any form. When recognizing the direction and guidance of Principle, manifested as the abundance of good, it can be said that one lives in the democracy of Mind.

History shows that the world has been making constant strides away from personal domination toward individual freedom or self-government whereby is acknowledged the freedom of the individual to be governed by Mind, to demonstrate the guidance of Principle in his course of conduct. Three outstanding historical documents marking the advent of a higher understanding of democracy are the Magna Charta, mentioned in the above quotation, the Declaration of Independence, and Lincoln's Gettysburg address. In comparing the Declaration of Independence with Christian Science, on page 106 of "Science and Health with Key to the Scriptures," Mrs. Eddy has this to say: "Like our nation, Christian Science has its Declaration of Independence. God has endowed man with inalienable rights, among which are selfgovernment, reason, and conscience. Man is properly selfgoverned only when he is guided rightly and governed by his Maker, divine Truth and Love. Man's rights are invaded when the divine order is interfered with, and the mental trespasser incurs the divine penalty due this crime." Throughout, the teachings of Christian Science emphasize the fact that man is influenced alone by God, Principle, and being amenable only to the law of God, the individual finds priestcraft, medical domination, human will-autocracy in any of its myriad appearances-of none effect.

The human will to rule or ruin in its autocratic determination to deprive man of the inalienable right to his own demonstration of the word of God is the antipode of true democracy which finds its practice summarized in the Sermon on the Mount. Christianity and the democracy of Mind are identical. Contrariwise, the apathetic phase of mortal mind that desires to be ruled and the phase of mortal mind that lusts to rule are equally expressions of the autocracy of the human mind. Woolsey in his "Political Science" says: "The extreme democratic spirit, like the despotic, is the substitution of will for law, and thus all constitutional limitations are so many curbs to its hasty action. But the will of the individual cannot be made the rule for others, unless he persuades them that he knows what is for their interest better than they do." Thus if one allows himself to be deceived into submitting to the control of the human will, either of his own or another's, the individual will surely

おからをおかけのののはないないがない

reap the harvest of autocracy in losing his ability to demonstrate Principle. The perception that one lives under the rule of Mind permits of no personal interference or domination but enables a man to recognize the absolute government of God expressed through every phase of experience.

Neither wars, revolutions, nor abortive attempts to overthrow governments will in and of themselves bring liberty to those in bondage, whereas the knowledge that man, the image of Mind, is governed by God, will make manifest in every way the freedom that has been the desideratum for which men have struggled throughout the ages. "That your faith should not stand in the wisdom of men, but in the power of God," then, is the method of Christian Science, by which democracy may be established for all mankind.

Grace and Gratitude

CLARKE F. HUNN

IN expressing the spiritual sense of the Lord's Prayer in the first chapter of the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy gives us a remarkable interpretation of the petition, "Give us this day our daily bread." In the parallel to this on page 17 she writes, "Give us grace for to-day; feed the famished affections." This commonest entreaty of mankind for sustenance, for strength in what we are wont to call the struggle for existence, is epitomized and illumined in this interpretation, which defies material belief with the definite implication that not only is the grace of God our daily bread, but it is indeed that food for which all mankind is starving. Moreover, since God is All and man is His true reflection, as we are taught and as we prove in Christian Science, then grace is not something to be vainly sought, or that is arbitrarily awarded to a chosen few. It is ours already, an attribute of Principle, reflected by man inevitably, impartially, and universally.

This daily bread of grace is perhaps best expressed to the thought of many Christian Scientists by the more common word "gratitude." Grace is defined as "the mercy of God," and our reflection of the infinite mercy is measured by our growth in understanding, the at-one-ment with the Father for which we daily strive. No word defines better than does gratitude the condition of thought that must initiate and accompany the unfoldment of omnipotent good, for it denotes no lip service nor empty tithe, but the humbling and inspiring turning to the one God in the growing understanding of divine sonship.

The phrase that instinctively rises to the lips of the student of Christian Science is ever, "I am so grateful!" Once uttered in glad spontaneity, however, it is a phrase to take with us into the quiet sanctuary of our prayers, for fervent reconsideration. There, as we count over again the blessings received and as we glimpse anew the untouched treasures whose Open sesame! is, "Son, thou art ever with me, and all that I have is thine;" as we strive for the clear vision of the inheritance of the children of God, the tremendous meaning of true gratitude dawns upon the thought. Gratitude becomes no longer a duty but a privilege, and the former somewhat overconfident, unthinking "I am so grateful" seeks a more reserved expression in the unvoiced prayer that the divine will be done. It becomes apparent that no belittling, downward-weighted thought or action can express this gratitude or dwell beside it. First must the tyranny of mortality be renounced, and the fact of man's spiritual origin and entity be earnestly realized.

True gratitude is not at all the spontaneous reflex of wellmeaning mortal mind that it is commonly considered, but rather the daily bread of grace, the manifest consciousness of the infinite mercy for which we hunger and thirst. The instantaneous healing power of gratitude is a common experience. In his beginnings of the study and practice of Christian Science one student was conscious more than once of a condition of thought that knew its effectiveness before the effect was apparent, and which was invariably so effective. This, at that time, novel experience was later seen as the clear sense of the already perfected, accompanied by a loving and trusting turning to the ever present perfecter of all things. This is the essence of gratitude, a coordination of faith, hope, and charity, with its certainty of blessing based on the consciousness of the divine sonship.

To be grateful only after healing is manifest is to express only a human trait that is barren of healing power. It is to ally one's self with the foolish virgins, returning with wellfilled lamps too late for the bridal feast. Rather should error's first appearing be the summons to the already grateful heart. God who heals all our infirmities has healed them already, for in truth they are not. "Beloved, now are we the sons of God," wrote John; and although we do not yet behold the true reflection, we know that man divinely formed is that true reflection, and that as the at-one-ment is attained we shall manifestly be like Him, "for we shall see him as he is." This, then, is the armor of our gratitude, which springs on guard at error's approach. "Stand porter at the door of thought," says Mrs. Eddy, on page 392 of our textbook. "Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously. When the condition is present which you say induces disease, whether it be air, exercise, heredity, contagion, or accident, then perform your office as porter and shut out these unhealthy thoughts and fears." It need hardly be emphasized that the "porter" is no effort of human will, no grim and desperate hostility to the claims of error. It is that impervious and imperturbable gratitude to God which is the consecration of the divine likeness.

Our Rightful Heritage

HILDA MARY STEPHENSON

WHEN one suffering from what has been pronounced by materia medica to be an incurable disease turns in his extremity to Christian Science for treatment and finds himself healed physically and uplifted mentally, he naturally wants to know something more of this Science. As he studies the Bible, the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and attends the church services, he finds that he has been brought into touch with the law of God, ever available and operative for good. He has simply been brought out of the wilderness of mortal seeming into a land flowing with milk and honey, where there are wells of water and palm trees; into a city of habitation and into his Father's house. In short, he has found his rightful heritage. He will find that it rests with him how firmly he establishes himself here and enjoys the bounty which his heritage includes. Every one who has had this experience knows that all that ever caused his suffering was that he had believed a lie whereas now he knows the truth. He had believed that life and intelligence are in matter, and that man is subject to material laws, whereas now he knows that God, Spirit, is the only Life and intelligence; that he lives and moves and has his being in God, and that as God's image and likeness the imperishable things of Spirit are his in unstinted measure. Right where he is, is liberty, for there "the Spirit of the Lord is."

age

Father, is the recognition of Christ, Truth, which has made him free. What a glorious heritage is ours to know that never for one instant can we be deprived of our Father's protection, of omnipotent Love, the only power, before which the phantoms of sense vanish. On page 304 of Science and Health Mrs. Eddy says, "This is the doctrine of Christian Science: that divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death." When the serpent would try to beguile us again into believing a lie about ourselves or others let us hold firmly to our heritage, that city wherein nothing entereth that defileth or maketh a lie. The prophet Micah tells us that "a man's enemies are the men of his own house." Let us, then, rather dwell in the house of the Lord-the consciousness of ever present Love, and abide in safety.

This recognition of his true heritage, his sonship with the

Loving Our Enemies

BERTINE L. STEERE

IN the twenty-second chapter of Matthew we read that Jesus said: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbour as thyself. On these two commandments hang all the law and the prophets." These verses, so full of good counsel, may always have meant a great deal to the reader; but just how to apply this counsel, to put it into practice with regard to one's self, may not always have seemed so clear. The world is coming to realize, as perhaps never before, the great need for the practical understanding, which in reality is the spiritual understanding, which puts these two commandments into practice. What we as individuals need, is to understand divine Love. We are told in the Bible that God is Love. Then if we are going to understand and know God, we must know and understand Him as Love; the Love that passeth all human

Too often are we prone to love those who love us, and to stop there. Now Jesus says, in the sixth chapter of Luke, "But I say unto you which hear, Love your enemies, do good to them which hate you, bless them that curse you, and pray for them which despitefully use you." Perhaps we may think that we have a friend who has turned out to be false, a neighbor who seems not to be our sense of a good and kind neighbor, or another Christian Scientist who to us seems not to be expressing frankness, kindliness, and love. Perhaps we may even feel that we have actually been treated unfairly and that consequently we have very good grounds for leaving that person severely alone. What are we to do in such a case? Are we to admit for an instant that such a reality exists? Can we afford to admit that a person exists apart from God? Mrs. Eddy answers this very plainly when she writes in "Miscellaneous Writings" (p. 8): "Who is thine enemy that thou shouldst love him? Is it a creature or a thing outside thine own creation?" And a little further on in the same article, she writes, "Even in belief you have but one (that, not in reality), and this one enemy is yourself-your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science."

Since all is Mind and its infinite manifestation, God and His idea, the idea of Mind must of necessity be reflecting this Mind, continually and eternally. In other words, where erring human sense would claim that there is any such thing

as an unkind neighbor or a false and unloving friend, we know that in reality the only neighbor, the only friend which we can possibly know is Mind's manifestation, which must be ever reflecting all harmony and love, all that is included in infinite Mind, infinite Love. Mrs. Eddy says in Science and Health (p. 476), "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

In this identical way it is our duty and privilege to behold in Science the perfect man of God's creation, the reflection of the One altogether lovely. We can refuse to admit the belief that an unkind, false, or sinning man can exist. In other words, we can refuse to see a false, sick, or sinning man, for no such man exists. Instead, we should be forever seeing the real man, the reflection of God, good. It is our God-given privilege to cast out any such spurious belief, with the divine understanding that no such belief exists. The fact is that all that exists is infinite Mind, and its infinite manifestation. And this Mind is changeless, eternal good. When this fact is clearly seen, any erring sense of fear of an enemy cannot be accepted, since if God is All-in-all, there can be nothing, outside of All, to fear. Likewise, any latent fear of mental malpractice, either ignorant or malicious, is cast out completely, by the very simple deduction that there can be no mortal mind to claim to us to be person, persons, or organization, thinking or planning evil, when infinite Mind and its idea is All-in-all.

Mrs. Eddy puts this very clearly, on page 103 of Science and Health, where she says: "In reality there is no mortal mind, and consequently no transference of mortal thought and will-power. Life and being are of God. In Christian Science, man can do no harm, for scientific thoughts are true thoughts, passing from God to man." If an individual is affirming and constantly striving to realize the truth about God and man in His likeness, that man in God's likeness is ever about his Father's business, doing good, expressing right activity always, and so forever glorifying God, he is replacing the belief in unloveliness, or unkindness, strife, jealousy, hatred, or war with the understanding of Principle. And if we are continually knowing the one Mind and its infinite manifestation, are we not then fulfilling the command of Jesus to "love the Lord thy God with all thy heart"? And if we are fulfilling this command, we are fulfilling also the next one, "Thou shalt love thy neighbour as thyself." For we are seeing neighbor not as material mortal man, but as the idea of the one Mind, the man of God's creating.

As Mrs. Eddy puts it on page 340 of Science and Health, "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself,' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Good Citizenship

FREDERICK D. CULVER

*HERE should be no diversity of opinion as to the requi-1 sites of civil and social conduct and our duty to organized society; but in human fallibility we find a wide divergence in beliefs of what may constitute the necessary qualities of good citizenship. Probably the pro-saloon sympathizers, in their attitude on the enforcement of the prohibition laws, best illustrate the point. For otherwise lawabiding citizens, who are real sticklers for the enforcement

:!

2

of the laws of the land generally, even including international, will too frequently aid and abet violation of all sumptuary laws.

At no time probably in national history of the United States has the public been called upon to defend and uphold the laws of the land as now; for, during this period of reconstruction or readjustment and governmental effort to restore normal conditions, it has been and is necessary to reconcile unrest and combat the saturnalia of crime that usually is incident to and the legacy of war, and which now obtains both here and abroad. Infraction of the spirit of the law is, on occasion, quite as reprehensible as perversion or defeat of its letter. Mrs. Eddy expressed herself vigorously in this connection. In the present chaotic state of flux that now embraces and seems to imperil social order throughout the world, the ray of hope and promise evidenced in a quickened spiritual sense permeating the whole social fabric is more marked and obvious than has ever been chronicled. Dogma and sectarianism have never before counted for so little. Principle, divine Love, is advancing the cause of Christian Science as never before. For the potency of a demonstrable faith that is a practical help in time of trouble is fast becoming recognized as meeting urgent human needs.

As a champion of good citizenship and defender of law and order, Mrs. Eddy was the peer of any predecessor in history exerting so wide an influence, and especially in the province of religion. The contrast is the more marked and refreshing as the bitter conflicts are contemplated that have obtained down through the centuries.

Purification of God's temple must be preceded by exposure of error before it can be destroyed. On page 448 of Science and Health Mrs. Eddy says: "Blindness and self-righteousness cling fast to iniquity. When the Publican's wail went out to the great heart of Love, it won his humble desire. Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured." And again on page 540 she says, "In moral chemicalization, when the symptoms of evil, illusion, are aggravated, we may think in our ignorance that the Lord hath wrought an evil; but we ought to know that God's law uncovers so-called sin and its effects, only that Truth may annihilate all sense of evil and all power of sin."

The optimism of true Christianity is the keystone of harmony and success, even more distinctly than pessimism is the lodestone of despair and failure. The quickening of an atrophied public conscience, since the war, augurs well for the future. When we read of men, social outcasts and under the ban of the law, redeeming themselves in some unselfish act of heroism and honor, or in war on the field of battle, it forcefully brings to mind the verity of the lines of Joaquin Miller:—

In men whom men condemn as ill
I find so much of goodness still;
In men whom men pronounce divine
I find so much of sin and blot,
I dare not draw the line
Between the two, where God has not.

Who can doubt the stabilizing of character resulting from the world's Armageddon? Concerning the some four million of the flower of American manhood that joined the colors, it is obvious on every hand that a new perspective of life has been inspired; that the old sense of selfishness and greed and living for one's self alone has and is being replaced by a desire for service—of extending aid to one's fellows, instead of seeking it. The new-born sense of civic responsibility is gradually replacing the old purpose of centralized personal

gain and aggrandizement with that of personal and community aid of fellow beings. "The rich in spirit help the poor in one grand brotherhood," says Mrs. Eddy (Science and Health, p. 518), "all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good."

Meditation

EDWARD O. AUGE

THE psalmist says: "Diessed is the mind the way of in the counsel of the ungodly, nor standeth in the way of HE psalmist says: "Blessed is the man that walketh not sinners, nor sitteth in the seat of the scornful. But his delight is in the law of the Lord; and in his law doth he meditate day and night." The true man is the man made in God's image and likeness, the perfect man, as stated in the first chapter of Genesis. Realizing but one cause and one effect, his meditation day and night is on the things unseen to mortal eyes but known to divine Mind as real, eternal, and substantial. The next verse of the psalm shows the reward of the Christianly scientific attitude of thought. "He shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper." The following verses of the psalm show the general trend of mortal thought, emanating from the man made of the dust of the ground, which is nothing but a supposititious counterfeit of God's man. His meditation day and night is on the ways of the material world, believing as real all the manifestations of error, which God never created. When a man begins to realize that it is what presents itself as his own false way of thinking which brings forth discord and unrest, and when he listens for the "still small voice" of Truth, he is awakening from the false belief that life can possibly be in matter, and begins to change his meditation from a material to a spiritual basis, and partakes of that perfect peace which is promised to him whose thoughts are stayed on God.

As thought is changed for the better, and the manifestations of love, humility, and gratitude present themselves to the right thinker, he may declare with the psalmist, "O how love I thy law! it is my meditation all the day." In "Science and Health with Key to the Scriptures" (p. 261) Mrs. Eddy says: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts." The sick man is sick because he meditates on sickness and clings to matter for his relief. The debtor remains in debt because he meditates day and night on lack and limitation which self-mesmerism is holding before his eyes as real. No mortal illusions such as mesmerism, sin, sickness, or limitation, can ever deceive the man who meditates upon God's law continually, for they are to him as fleeting shadows that will be entirely dispersed just as soon as the light of Truth is given a chance to shine fairly upon them, that their nothingness may be revealed.

"Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause," says Mrs. Eddy in Science and Health (p. 313). In no case of healing performed by the Master did he inquire about what the patient had been eating or drinking, what kind of atmosphere or contagion he had been exposed to, or any other condition which might have befallen him from a material standpoint, but his clear spiritual vision enabled him to read the thoughts of his fellow men and detect that their meditation day and night had not been upon God's law, but upon the false law of mortal sense, and this spiritual insight enabled the Master to re-

move the mental cause of disease, thus setting the sufferers

All through the Scriptures the secret of right meditation is revealed to the spiritually minded man, enabling him to demonstrate the Principle of being, a knowledge of which, when rightly applied, gives him the ability to prove the spiritual idea of Truth and Love. Christ Jesus said, "Search the scriptures; for in them ye think ye have eternal life." Is there any higher law for daily meditation than that contained in the Sermon on the Mount and given to suffering humanity by the best demonstrator of scientific Christianity the world has ever known? The Hebrew prophet Joshua said, referring to the Pentateuch, that portion of the Bible which Moses gave, "This book of the law shall not depart out of thy mouth; but thou shalt meditate therein day and night, that thou mayest observe to do according to all that is written therein: for then thou shalt make thy way prosperous, and then thou shalt have good success."

When Love rules every thought and divine intelligence directs every move, there can be no failure in any honest undertaking, nor can there be any manifestations of evil, such as sin, disease, or death, which when given half a chance will slip upon the unguarded thought. The man meditating constantly on false law wonders why he is sick, why his business is a failure, and why discordant conditions are surrounding him, while he sees his neighbor happy, healthy, prospering, and finding success wherever he goes. When a man's meditation enables him to understand how to dwell "in the secret place of the most High" he has risen above the testimony of false law and is able to face adverse conditions without fear. He knows and demonstrates his safety when in battle or on the firing line. He feels the perfect assurance that no plague shall come nigh his dwelling and in times of contagion he is not afraid to do his good Christian work in any emergency, knowing that there can be no bad results. Paul gives the rule for the overcoming of all mortal, discordant conditions. "Finally, brethren," he says in his letter to the Philippians, "whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

(Written for the Sentinel)

More than Conquerors

MARY A. MACOMBER

Wearying one, the struggle cease.

Let peace the troubled thought release.

The boisterous wind, the waters deep,

Are but the dream that comes with sleep.

God's peace His own encompasseth,

Peace all understanding passeth.

Awake! The dawn is in the skies!
Why tarry now in mortal lies?
Love leadeth thee in pastures green,
Love shieldeth thee from earth-blasts keen.
Goodness and mercy all thy life
Shall guard thee from the sensuous strife.

Now is light in which to go; Love triumphant thou mayst know. "Abide in me," no darkling sense Is here. Arise, go hence. Walking with God in paths apart, More than conqueror thou art.

Obedience

CHRISTINE EMERY

THROUGHOUT his earthly ministry Jesus constantly emphasized the necessity of work and obedience. "Occupy till I come," was not an idle precept with which he sought to impress his followers, for from earliest youth he recognized the dignity of labor and the imperative need of spiritual attainment. "Let us not be weary in well doing," said the apostle Paul.

In the fifth chapter of Luke we read, with the clearness of vision that comes to us when we study the words of the Bible aright, a story of simple fishermen, men of activities and environment quite foreign to those of modern times, and yet, so searching and eternal is the way of Truth, problems similar to theirs are recurring daily in the lives of present day disciples. These toilers had spent the night upon Lake Gennesaret, and wearied and discouraged by their season of fruitless effort they had brought their ships to land and when Jesus approached them they were busily washing their nets, thus indicating their unanimity of thought, which was apparently that as conditions were unfavorable it would be useless to continue their labor. But Jesus chose to remain entirely oblivious of this conclusion, for when he had spoken to the crowds that pressed about him, he turned to Simon, from whose ship he had addressed the multitude, and commanded him to launch out into the deep and let down their

With sympathetic understanding we can visualize the scene and hear Simon's answer as he retold the story of their weary night and their final submission to the seemingly dominant material conditions: "Master, we have toiled all the night, and have taken nothing," and a moment later we behold his positive refutation of material law and his instant and implicit reliance upon divine wisdom by the unquestioning obedience with which he concluded, "Nevertheless at thy word I will let down the net."

Reading further we find that when the boats were cast from the shore and the nets were lowered in the designated place, "they inclosed a great multitude of fishes," a phenomenal supply of blessing, far beyond their expectations and of so unlimited a measure that "they beckoned unto their partners, which were in the other ship, that they should come and help them;" and again the wisdom of the Lord was manifested, for so great was their united bounty that the ships began to sink.

In other words, so great were the benefactions that were being bestowed upon him that Simon Peter suddenly realized his own unworthiness, and in his cry, "Depart from me; for I am a sinful man, O Lord," he uttered his newly awakened and profound conviction of the superiority of spiritual possession over the greatest of material abundance. The reassuring words of Jesus, "Fear not; from henceforth thou shalt catch men," came as healing balm to his troubled heart, establishing so unquestionable a state of spiritual supremacy that straightway he and his companions brought their ships to land and joyously followed the behest of spiritual perception.

Had Peter disregarded the command of Jesus, if doubtful and vacillating response, surly attitude, or an arrogant sense of personal pride had entered into his thought, how different the outcome would have been. Because of his instant and loving obedience to the word of the Lord, and in his triumph over self, this humble fisherman has given us a potent and demonstrable concept of the truth, for God has taught us through him that obedience is the first law of service.

"True humanhood"

THE object of religion is to make the world good. Unfortunately, the pursuit of this object has revealed all the bigotry, hypocrisy, and cruelty inherent in the human mind. Madame de Maintenon summed up the effort, with unconscious sarcasm, when, in the midst of the license of the ancient régime, she declared that she had made religion the fashion. As a consequence, society has smiled cynically at the mere mention of goodness, and the great imaginative writers, in their creations from Tartuffe to Stiggins, have used hypocrisy as a foil for human passion. As a result, goodness has become suspect, and the excuses for evil have been many and generous. Now all this arises out of a mistaken idea of what constitutes good. Good is the atmosphere of God, and God is the term men in all ages and all countries have given to their highest conception of good. The eastern peoples, in the dawn of history, personified these conceptions in the form of personal deities, and, in the same way, personified their conceptions of evil as devils. Gradually, out of this welter of human superstition, there arose the Hebrew ideal of monotheism. A man could not hold that ideal and live in Padan-aram. And so Abram obeyed the promptings of Principle, and came out from the land of the idolators, and was separate.

The story of the Hebrew people, as recorded in the Bible, is the story of the gradual overwhelming of the human conception of God, good, by the spiritual conception of good as Principle. The necessity for this is made particularly clear, by Mrs. Eddy, on page 20 of "No and Yes": "When the term divine Principle is used to signify Deity it may seem distant or cold, until better apprehended. This Principle is Mind, substance, Life, Truth, Love. When understood, Principle is found to be the only term that fully conveys the ideas of God, one Mind, a perfect man, and divine Science. As the divine Principle is comprehended, God's omnipotence and omnipresence will dawn on mortals, and the notion of an everywhere-present body-or of an infinite Mind starting from a finite body, and returning to it-will disappear." There, as the preacher says, you have the conclusion of the whole matter. The Old Testament is the record, in allegory and in history, in poetry, drama, and philosophy, of the development of the idea of humanity as the image and likeness of God, manifesting good or evil in its alternating obedience or disobedience to God; whilst the New Testament is the preaching of good as Principle, and the proclaiming of man not as a material image of Spirit, but as the spiritual reflection of Principle.

The good man of the Old Testament was the patriarch, the judge, or the prophet, the human being who obeyed the commands of a tribal Jehovah, endowed with the passions of humanity; the good man of the New Testament was one who had conceived God as Principle, who realized that there was none good but this Principle, and who consequently under-

stood goodness as the fading away of the human mind before the Mind of Christ. In other words, a standard of perfection had been set up which was not human but divine, with the effect that although a man might have qualms about goodness in conditions when goodness was confused with bigotry, hypocrisy, and cruelty, he had no desire at all to be proclaimed unprincipled, or outside Principle. Thus goodness came to him, in a new and a true guise, not as a human conception of a supposed racial, temperamental, or social necessity, but as the scientific result of obedience to Principle. And, in this way, it became possible for him to rejoice unhesitatingly in goodness, through an understanding of what Mrs. Eddy means when she writes, on page 49 of "Unity of Good": "To me the reality and substance of being are good, and nothing else. Through the eternal reality of existence I reach, in thought, a glorified consciousness of the only living God and the genuine man. So long as I hold evil in consciousness, I cannot be wholly good." Once more, the conclusion of the whole matter.

The way then to peace, health, and holiness, is the total exclusion of evil, sensuality, and materiality, from conscious-The impossibility of this to the materialist lies in the fact that he believes in the reality of matter, and so cannot see the necessity, much less the possibility of its exclusion. That is exactly the frame of mind to which Christ Jesus was alluding when he said, "Ye are of your father the devil, and the lusts of your father ye will do." Only as a man realizes the nothingness of matter can he hope to begin to reduce this realization to demonstration by excluding matter from his calculations, and so from consciousness. And in the proportion in which he is successful in this, he will be good, in no hesitating semi-material sense, but with the overwhelming force of Spirit. Then he will begin to preach the gospel, as Christ Jesus preached it, with authority and not with mere verbiage, and to heal the sick not spasmodically, but, as Christ Jesus healed them, by multitudes and by a word. Thus he will reach, through the elimination of evil by a recognition of its nothingness, to "true humanhood," of which Mrs. Eddy writes, on page 49 of "Unity of Good," "The more I understand true humanhood, the more I see it to be sinless,—as ignorant of sin as is the perfect Maker."

Such an effort to attain real goodness means, of course, the sacrifice of all human appetites, predilections, and opinions. It is easy enough to realize what faced the rich young man when he was told to sell all he had and walk in the footsteps of the Christ. Every man, be he rich or be he poor in gold and silver, has great possessions—great visions of the senses, great loves or hatreds, passionate hopes and fears. Lazarus, probably, was as thoroughly envious of Dives as Dives was cruelly indifferent to Lazarus; Brutus imagined that he could overcome autocracy by taking Cæsar's life; even Francis of Assisi thought that men could be induced to love poverty by being poor. The Franciscan, the pauper, and the millionaire, equally with the autocrat and the revolutionary, have one and the same lesson to learn, the nothingness of matter, evil, and the allness of good, Principle. Men are not weaned from matter by asceticism; that rather impresses it upon them. They are weaned only by a scientific perception of the fact that, in believing in the reality of matter, they are being imposed upon by a mirage.

It is the obliteration, therefore, of materiality, of evil, in any and every form, from human consciousness that offers the only way of escape from the mirage of the material senses. In proportion to this obliteration of these works of the flesh must the fruits of the Spirit become manifest. It is materiality which causes every one of the pains and troubles

of the human being. He need not look abroad or at his neighbors for the cause of his disquietude, he will find it all within. But, until he recognizes this, he will never know the peace of God, good, that passeth all understanding.

FREDERICK DIXON.

The Absolute Beginning

When everything seems to have gone wrong, one can turn to Christian Science, begin at the true beginning, and find relief from the evils of mortality. In such a case, a man may well ask himself, "What do I really know?" If he thinks himself miserable and disillusioned, he may hesitate even to believe that God exists. How then can he turn to and rely on God until he is convinced at least of the possibility that there is a Supreme Being? Already such a man has found the evidence of the physical senses baffling and unsatisfactory. On that evidence, God is supposed to be the source of evil, the inexorable cause of brutal anguish that is intended in some way to bring about good. It is a curious fact that many ordinary religious concepts of the last few centuries have grown out of the poetic interpretation of Milton and Dante, rather than out of the Bible itself. Materialistic imagination, along with strictly inductive, empiric investigation, has evolved a hypothesis of a mysterious power producing good and evil in constant conflict. To reject all this baseless supposition and accept the actual Principle of being, a man needs, therefore, to consider what he truly knows, regardless of the material senses, regardless of what he may have been led to believe in any way, and regardless of his own preconceptions.

Depending on the human senses, a man encounters merely illusion after illusion. Every one is familiar with numerous optical illusions, such as the convergence of track rails in the distance, the mirage on the desert, and what looks like the flowing of a stream uphill when one suddenly approaches it at a particular angle. If the senses can be mistaken in these ways, how can one have any more confidence in the results of observation through a microscope? The investigator with the microscope tries, of course, to correct his data by allowing for other considerations. At the best, however, his knowledge is human supposition, which at any moment further study may entirely reverse.

In order to prove that God exists, it is not enough, therefore, to look at the material universe, either extensively or intensively, and then to conclude that there must be a cause for all these seeming wonders. Belief in a cause for illusions is not a sure basis. No man, moreover, can be required to accept what some one else tells him. A personal assurance that the love of God has been experienced by many as a healing and regenerating force may have little weight to one who thinks himself a confirmed skeptic and cynic. Each one is entitled to prove for himself to his own positive satisfaction that there is true Principle. Such proof cannot rest on any vague intuition or suffusing emotion. The absolute beginning for scientific reasoning is spiritually logical and sure.

The first step is, indeed, inductive. With all humility, a man must consider what he himself knows, quite apart from the physical senses. The one fundamental fact is that his own existence, his own conscious being, does not depend on mortal sense testimony. Though he may feel that he is cognizant of much that he wishes he were not aware of, the first point for him to consider is, not what he seems to be conscious of, but the fact that he is conscious in any sense of the word. Without any of the physical senses, his way of living might, of course, be altogether different from what it seems

to be now. Yet one knows that the obliteration of any of the mortal senses may leave a man alive. Here and now, one who is alive is conscious in one way or another. Even the man who is said to be unconscious is simply experiencing a somewhat different form of consciousness, and not total nonentity, as any physician would have to admit.

Thus, one is forced to admit, consciousness is a fact. Being conscious of his own existence, a man knows that consciousness actually is. Of this he is sure. There could not be any false and counterfeit belief about this without there being the truth first. The cause for truly being conscious must be divine consciousness itself, Mind. Divine consciousness, then, provably exists. In other words, what is actually is proved in this way to be the wholly unassailable basis of Christian Science. The word "is," it must be recognized, is a decidedly strong term. What really is must be all there is, and must include no element of destruction. Anything more than or opposite to what is, what exists, would have to be a supposition of nonexistence. Nothing more than the basic truth of divine consciousness and all that it includes can one prove for himself, regardless of the physical senses. All else that may seem to be depends merely on unreliable human sense testimony. Indestructible Mind is, therefore, the cause for immortal living. God is the intelligent name given to this divine consciousness.

This is reasoning by which each one turning to Christian Science may prove to his complete satisfaction that God exists. The proof is by no means limited to any one set form of words. It infinitely unfolds as the boundless expression of intelligence. The understanding of God is the absolute beginning. On page 275 of "Science and Health with Key to the Scriptures" by Mary Baker Eddy, we read: "To grasp the reality and order of being in its Science, you must begin by reckoning God as the divine Principle of all that really Conscious existence is all one really knows, and God, divine consciousness, is the Principle of true living. By understanding here and now with calm surety what it means to be able to know "I am conscious," one has a firm basis on which to reject any suggestions of fear, timidity, or doubt. It is good to be conscious, to be alive. The knowing of this is tremendous present understanding of Life. As Mrs. Eddy declares in "Unity of Good" (p. 48), "I believe that of which I am conscious through the understanding, however faintly able to demonstrate Truth and Love."

To rejoice that conscious spiritual living is indestructible, because it is produced by infinite and eternal Principle, is to know the basic truth which Christian Science teaches. It is not enough to apprehend this intellectually. Each one must accept and demonstrate for himself that "the absolute consciousness of harmony" is the only true consciousness. It is on page 11 of "Rudimental Divine Science" that Mrs. Eddy says: "Health is the consciousness of the unreality of pain and disease; or, rather, the absolute consciousness of harmony and of nothing else. In a moment you may awake from a night-dream; just so you can awake from the dream of sickness; but the demonstration of the Science of Mind-healing by no means rests on the strength of human belief. This demonstration is based on a true understanding of God and divine Science, which takes away every human belief, and, through the illumination of spiritual understanding, reveals the all-power and ever-presence of good, whence emanate health, harmony, and Life eternal." Thus the seeker for the truth can prove for himself that absolute Principle is. and is the rewarder of all who diligently rely on the divine Mind as the sole cause.

Testimonies of Healing

When Christian Science was first seriously brought to my attention I was practically down and out in consequence of at first reluctantly, then willingly, following after false gods. This state of affairs had been in the process of development for months, and on a day when the end of my rope was reached I was unexpectedly invited to spend the afternoon with a Christian Science friend. That evening I was lifted out of my trouble and ushered in upon a new era of existence

The visit opened with a discussion of the nature of God, whom I have come to discern in the aftermath of experiences as the supreme governing intelligence, Life, Truth, and Love,—and I wanted to talk about Him and nothing else. It closed with my carrying away with me a borrowed copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, having learned that she wrote of such a God. Hastening with the little book to my room in a hotel, I read fifty pages without stopping, so hungry was I for the truth it contained, and experienced a very perceptible transformation of thought.

At some moment during that reading, now over eight years ago, the spell of the liquor habit, which had me quite in its meshes, was broken. The healing was instantaneous and I realized that I had at last found something better than the effects of alcohol to allay a troubled and turbulent mind, something that brought, with satisfying spiritual draughts, that peace "which passeth all understanding." And then, with my mental state rehabilitated, there followed quick relief, through employment, from financial embarrassment. Several months later the craving for cigarettes vanished while I was reading the testimony of the healing of a drunkard through Christian Science.

Besides these, I have had many other blessings conferred upon me through the operation of spiritual law in my affairs, and among them have been the fulfillment of lifelong quests without exertion on my part, the pacification of a restless disposition, and the attainment of happiness. Only can I seem to express my gratitude for Mrs. Eddy's invaluable gift to mankind in these words: All that I am, such as I am, and all that I have, such as I have, I owe to restitution and progression through Christian Science.

FRED JOST, San Francisco, California.

4

My heart overflows with gratitude for all the good that has come to me through Christian Science. When I first heard of this teaching I was so impressed that I immediately purchased and studied the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had a serious skin trouble from which I had suffered for three or four years, but through the loving, untiring work of a Christian Science practitioner I was completely healed in a week and since that time have been joyful and happy again. Also, through reading all the Christian Science literature I have become as another person. Whereas formerly I used to worry constantly about the future, I am now free. for I know that our Father-Mother God will not desert us, and that His love for us is greater than that of those dearest to us.

I am heartily grateful for the kind gift packages which were distributed by the Christian Scientists to all the beginners here in Plauen. What happiness it is to know that our dear fellow men in a foreign country are so lovingly thinking of us and showing us their love. It is our earnest desire to be able very soon to hold church services here, so

that the wonderful teaching may be spread still further. I again express my gratitude for all the good which has come to me through The Mother Church in Boston.—(Miss) GRETE KUCHS, Bartmühle-Jocketa, Sachsen, Germany.

 ♦

 n, I inl

When at a public luncheon, I inhaled something that apparently closed my windpipe, and I could not breathe. I arose and went to another part of the room and endeavored to help myself metaphysically. This I was not successful in doing, due perhaps to fear. I was on the verge of losing consciousness when it occurred to me to walk to where a Christian Scientist was sitting at a table, a short distance away. I managed to make known to her my condition. The trouble was quickly overcome, and I was able to finish the duties which I had to perform at the meeting, with perhaps only one or two, other than the Scientist and myself, noticing the difficulty. This is the fourth time that Christian Science has come to my rescue in an extremity.

Words but faintly express the gratitude I feel for this great truth, and the blessings it is constantly bringing to mankind. It is indeed the revelation of God to this age through our beloved Leader, Mary Baker Eddy, and is a self-evident revival of the teachings of Christ Jesus.

G. A. McDonald, Memphis, Tennessee.

4

At the time of my first healing in Christian Science I was an active member of a denominational church. I knew that God had healed me, and immediately wanted to know how the healing was done. As I read "Science and Health with Key to the Scriptures" by Mary Baker Eddy the truth unfolded to my thought and satisfied a hungry heart. Christian Science is the truth that I had always longed for, but did not know where to find it. My first healing, which was of tumors, took place in five treatments, through the work of a practitioner. I have also been healed of pneumonia, influenza, a skin trouble, and recently was wonderfully sustained when my only child, a son in young manhood, was assassinated, passing away instantly.

During this last experience my first thought was of the relationship of God and man, and I instantly realized that man in the image and likeness of God could never be destroyed; that the son of God was the only son there was, and he could never be separated from the Father; that "outside the material sense of things, all is harmony" (Science and Health, p. 489). Every argument of the carnal mind presented itself to me. First came the thought of loss and separation, but I knew that in the one Mind we both lived and moved and had our being, and there could be no separation there; and that the son of Mind was safe in Mind. I knew the qualities that made him beloved by all were the loving qualities of divine Mind which he reflected and would continue to reflect throughout eternity. The thought of companionship and association presented itself; there, too, I had to know that Mind manifested is all that I ever had associated with or ever could associate with.

Since I began the study of Christian Science it has met all my needs, mentally and physically, for which I am grateful; but I am infinitely more grateful for a better understanding of the Bible and a clearer vision of God and generic man. I am grateful for every avenue that Mrs. Eddy has established to spread the truth, and especially for The Christian Science Monitor, whose work is to publish all over the world the good news that Principle governs.

(Mrs.) PEARL L. PARKER, Reno, Nevada.

I wish to express my deep gratitude for a knowledge of the teachings of Christian Science. For more than eight years I have been a sincere student, and during this time I have received countless blessings. I came to the truth through the healing of relatives, and through divine Mind's guidance many problems have been overcome. When in the settlement of my husband's estate I consulted a practitioner regarding that which to human sense seemed unjust, I was told to rely on God's law, and to allow God to govern the situation, and in two years' time everything was satisfactorily settled. Four years ago I sprained my ankle, and it seemed impossible to take a single step on account of the pain, but I declared the truth and was thus enabled to walk to a practitioner, a short distance away, who gave me a treatment, after which all pain was overcome, and later a slight nervousness. In a few days I was about the house as usual, entirely healed.

On page 584 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we find the following definition: "DEATH. An illusion, the lie of life in matter; the unreal and untrue; the opposite of Life." I thank God for the overcoming of grief and that I could carry the burden to the all-sustaining, infinite One. Many times during this trial a sweet message of Love came to my thought through the following words from one of our hymns (No. 241): "Earth has no sorrow but Love can remove." The beautiful words of "Mother's Evening Prayer" by Mrs. Eddy (Poems, p. 4) also brought comfort, peace, and joy. There are so many things to be thankful for if we but recall our blessings. I am truly grateful to Mrs. Eddy for having given to humanity "Science and Health with Key to the Scriptures." I am also grateful for the Christian Science periodicals, for church privileges, and to the practitioner through whose loving encouragement I have been enabled to remain steadfast. My greatest desire is to grow in spiritual understanding and to demonstrate this in my daily life.—(Mrs.) Ella Heywood Smith, San Jose,

I am very grateful for all that Christian Science means to me, and I feel particularly grateful for the knowledge that Love can and does overcome hatred, envy, malice, revenge, sin, and all the et ceteras of mortal mind. About five years ago I had a very clear proof of this. A friend had a horse which was considered to be very vicious. It would kick and bite so that four or five men were unable to control it when harnessing it to a vehicle. In fact the only way they could overcome it was by using an instrument of torture, known as a "twitch." This seemed to have the effect of attracting the horse's attention to the pain to such an extent that it would not kick and fight for the time being. I have seen it stand and defy four or five men on more than one occasion. I several times asked the owner if he would let me harness the horse, but each time he refused, saying that the horse would kill me if I attempted such a thing.

Things seemed to go from bad to worse, however, and several of the men threatened to leave if the horse was kept any longer. They had tried all the physical force they could, but without success. It was at this stage that the owner asked me to give the horse Christian Science treatment, if I thought it would do it any good. Although I had several months before only been a scholar in a Christian Science Sunday school, still I was ready to help when called upon.

A few days after commencing treatment, so convinced was I that the horse expressed nothing but love that I decided to prove that it was healed. I went into the stall where it was and stood beside its head, a thing I had been warned by the owner never to do. With the constant realization of the

omnipresence of Love, and that every activity and movement of that horse's being was governed and controlled by divine Love only, I remained quite still for a few minutes. The horse drew back its ears, showed a certain sign which I had been told always meant danger, and practically touching me with its nose sniffed at me from my feet up. When it reached my face, fear seemed too great, and I withdrew a pace or two. A few seconds later I stepped forward again, but was obliged to withdraw. Then the thought came to me, "I have trusted God with my life before and I can trust Him again." I went forward as before, but this time did not move from my place. After a few minutes the horse put its nose into my hand and putting out its tongue licked it. I then held out the other hand and it licked that, and so on alternately. When it was driven shortly afterwards it was quiet as the other horses, and this time there were no complaints.

I am very grateful to Christian Science for unfolding to me what man is, and his relationship to God and His spiritual creation.

JOHN HENRY ALEXANDER, Manchester, England.

For many years I had suffered from nervousness and bowel trouble. I had been under the care of many doctors, and within the last two years seemed to get worse. I was both physically and mentally ill when in December, 1919, a dear neighbor and friend talked to me about Christian Science. Although I did not understand what she said, I always felt better after she had talked to me and had told me about God and His love. This dear woman fed me, not with material but with spiritual food, and just as a mother would lead a baby she led me to my heavenly Father. In three weeks' time I was healed, and was a changed woman. The road has not always been smooth, but I knew that God was working with me and that He would bring me into the light if I would trust in Him; this I have learned to do and He has never failed me.

I have been able to overcome sorrow and to bring comfort to one very near and dear to me. For all this I am indeed very thankful, and would like to state that Christian Science will and does heal under all circumstances if we trust in God and keep His commandments. I am very grateful to God and to Mrs. Eddy for this wonderful truth and to the practitioners who have helped me. I hope my testimony will help some struggling one as those of others have helped me.—(Mrs.) Nellie Seater, Washington, District of Columbia.

Some years ago, while still a member of a denominational church, I began attending the Christian Science church services. I found the reading of the Lesson-Sermon instructive, and acceptable with one exception. Each Sunday as the Reader announced that he would read from "Science and Health with Key to the Scriptures" by Mary Baker Eddy, I was very much stirred up. I invariably said to myself, "Why give out the name of the author?" I thought it over a great deal, and thought the services would be all right if only Mrs. Eddy's name were omitted. This opposition in thought to the use of Mrs. Eddy's name grew stronger as the weeks went by, until it finally seemed almost unbearable, and I thought would have to give up going to church.

While I was thinking it over, trying to determine what I should do, the thought came to me that although it seemed so distasteful to me, and might seem so to some others, in reality there could be no harm in such an announcement, and that perhaps my dislike for it might be a personal

prejudice of my own. With this thought I felt somewhat relieved and decided to continue my attendance at church, which I did, still thinking, however, how much better it would be to omit all mention of Mrs. Eddy's name. During this time I was reading the textbook and was much interested in it. But this one question was the perplexing one at that time.

Some weeks later, at one of the Sunday services, when the usual announcement was made, it fell upon my ears with a decided welcome, much to my surprise, and I at once said to myself, "I am healed." Almost unconsciously I began at once to recall other things against which I had formerly been prejudiced, and it seemed impossible to arouse a prejudiced thought. This healing was thorough and convincing. From that time on the services have always been inspiring and beautiful. I have since had many healings, which have brought me a great deal of comfort. Before coming into Christian Science my thought of God was much confused; I thought of Him as the author of evil as well as of good. I was greatly unburdened through the healing of this false view of God; and, of course, other beliefs, resulting from such a false premise, were cast out with it. Physically I have been healed of constipation, fever, and colds.

I am deeply grateful to God for the truth, made plain and practical to the world through the life and teachings of our revered Leader, Mary Baker Eddy.

FRANCIS T. SMITH, Bridgeport, Connecticut.

٠

I want to express my gratitude to God for all His lovingkindness to me, and also to Mrs. Eddy for the Science of Christianity which she gave to the world when the world most needed it.

When the problem of finding the right occupation presented itself, one plan after another failed, and I thought if I went to a new place I might do better, so decided to visit relatives in a distant state. The relatives knew very little about Christian Science and being doctors and missionaries they had their own beliefs about health laws and religion; nevertheless sickness reigned in their home. Shortly after my young son and I arrived a member of the family was taken ill with influenza. One by one they all came down with it and finally my little son. He was in bed only one day, and, although he had a high fever, by morning his temperature was normal. The doctors were astonished and felt sure that by noon the fever would return, and laid down the usual laws, but my son and I knew only one Lawmaker and one law. We held persistently to the truth, and Truth was the victor.

I had been trying to find employment and not meeting with success. I was finally led to a practitioner and through her loving help I was enabled to work out my problem. I found employment back in my own state, and not far from my home. I had to wait a month for the position, and had only a little money, but divine Love met all my needs, and money was sent for me to buy my railway tickets.

Everything was new to me, but I knew that Mind could not make any mistakes or forget, neither could man, who is Mind's idea, and the work went on very smoothly. I find in my work as housekeeper that by knowing that this is a "heaven-protected home" (Hymnal, No. 39), and by refusing to listen to error, that those working under me express more kindness and do better work. So my prayer is for greater understanding that I may do better work, and so let my light shine that I may thereby glorify my Father-Mother God.

I am very grateful for the reading rooms, for our churches, periodicals, and the patient, loving practitioners.

No matter how lonely or discouraged we may become, each one of these channels is open and waiting to save and heal. I am very grateful for all that Christian Science has done and is doing for me.

(Mrs.) CLARA JUDSON, Hobart Mills, California.

I have been reading the testimonies in the Christian Science Sentinel for several years, and having received great benefit from them have often thought that I should give thanks to God by testifying to the many blessings which I have received through Christian Science. Although for many years a member of a denominational church, in which I held an office for several years, I prayed and looked for a God who did not send sickness and sorrow to His children. I looked for a God of love as the Bible teaches us, a God who heals sickness and forgives sin, but failed to find Him.

About fifteen years ago, when I had a nervous breakdown and all material remedies had failed, while on my way home from a visit I called on a Christian Science practitioner in a near-by town, and I never shall forget how kindly he told me that God is Love. The same day I purchased "Science and Health with Key to the Scriptures" by Mrs. Eddy, went home and read it through. After reading a few days I began to improve, and in a few months, with a few treatments from the practitioner, I was healed of the nervous trouble. I also was healed of stomach trouble. Before I came to Christian Science I had great fear of food, but now, thanks to God, I can eat anything that is set before me and enjoy it. Attacks of the grip and very many other discordant conditions have been overcome. I would not part with the knowledge gained through reading the Bible, in connection with Science and Health, for any price.

Three years ago I withdrew from our former church and my wife and I joined The Mother Church in Boston, for which we feel very grateful, and it is our daily prayer that we may be called worthy Christian Scientists. I have now found the God I had long been looking for, a God of love, a God who heals sickness and forgives sin. It would be impossible to enumerate the many blessings and healings which I have received during the past years, and words are inadequate to express my thankfulness to God, my gratitude to Mrs. Eddy, and to the kind friends who have helped me. I enjoy reading the Bible, Mrs. Eddy's writings, and all the Christian Science literature, and try each day to gain a better understanding.—John Klar, Dysart, Iowa.

4

About six years ago I became afflicted with what five attending physicians unanimously agreed was neuralgia of the face. Their treatment of this malady was somewhat identical, consisting mainly of the use of opiates, although one or two suggested surgical operations on the diseased portions as permanent remedies, necessitating my removal to a hospital. I was unable to swallow food without the use of a tube, which of course restricted me to liquids only. After two of these supposedly final operations, there was no relief, and my husband, fairly indignant with the results, wrote to a doctor then in attendance for his opinion as to my condition.

In a written reply, the doctor said in part: "Your favor received and note what you say relative to pain Mrs. R. is having. . . . I am quite positive it is not medicine she requires, but Christian Science or some other mental treatment beyond my power, that will rejuvenate her general nervous system and get her back to herself again. . . . I would suggest that she be put under the care of some good Christian Science practitioner, who I believe would make her en-

tirely well." This advice, which was surprising, has since had my hearty approval, although the doctor's misconception of Christian Science is now evident, in that he felt that it was some hypnotic influence I was in need of, when Christian Science, the remedy recommended, is quite the opposite.

Christian Science treatment was asked for after everything else had failed, and partial relief was immediate. Through the consistent reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible, and the use of *The Christian Science Quarterly*, I have come to be grateful to God in ways never previously experienced. With the aid of a practitioner, my health has gradually been restored. That "God is All-in-all" (Unity of Good, p. 3) is being daily demonstrated to me in many ways.

(Mrs.) CAROLINE A. ROEHL, Wallace, Idaho.

I wish to add my testimony to the many I have received help from through the *Christian Science Sentinel*. It has been nearly two years since I began to study Christian Science and I am grateful for "Science and Health with Key to the Scriptures" by Mrs. Eddy. My first healing was of headaches that I had been subject to for twenty-five years, also extreme nervousness and neuralgia. I knew that this healing, which was accomplished in three months, was through the power of God.

I am grateful for the uncovering of many faults of character, such as pride, self-will, and self-condemnation; also the condemnation of others, which I hope to overcome through the truth. I have learned to appreciate the wonderful life work of Mrs. Eddy, and the work of the practitioners, who are always so ready to help in time of need. I hope I may be able to express my gratitude by daily deeds, and thus learn more of the truth that makes free, and be enabled to help others. I hope this may help some one, as I have been helped many times by reading the testimonies in the Sentinel.

(Mrs.) INA SPEARS, Hoquiam, Washington.

in or man, in

With thanks to God and gratitude to our dear Leader, Mary Baker Eddy, also to those who so lovingly brought Christian Science to me, I write this testimony. In the spring of 1917 I was a physical wreck, having suffered from bronchial asthma in an aggravated form for the greater part of a year. At the time I began treatment I was also suffering from pleurisy and pneumonia. In half an hour from the time I asked for treatment the pleurisy pain left and I was able to prepare dinner for my family, whereas up to that time I could not walk across the room. This was up to that time I could not walk across the room. on a Saturday morning. After resting that night for the first time in two months, I decided on Sunday morning that I would like to go to the Christian Science services, not having attended before. I walked seventeen blocks to the church, returned and attended to my family of three small children, with no after effects, except for good. I repeated the walk in a drizzling rain the next day to purchase a copy of "Science and Health with Key to the Scriptures" by Mary Baker Eddy. The third day I made a journey of two hundred miles, with the children, without fatigue. Although the complete healing was slow, I was so grateful for this

We were seemingly tried during the next year with every "ill that flesh is heir to" and had to overcome great fear. In that time double pneumonia and pneumonia swelling, scarlet fever, influenza, blood poisoning, and boils were beautifully overcome through the power of Truth and the loving help of a practitioner. Through all this we had only three present

treatments. The birth of our last baby was a beautiful demonstration of the protection of divine Love. The child manifested only harmony, after having been pronounced abnormal in every way.

I am so grateful that I can say I am completely healed and that the healing has been permanent. I hope that this may help others as the testimonies in the Sentinel and Journal have helped me, both of which periodicals mean so much to us. We have also found that Christian Science is not only for mental and physical healing, but can be relied upon for every need. We found in the care of a small garden that we were blessed with an abundance. Although many discouraging remarks were made in regard to it, we held fast to the truth as stated by Mrs. Eddy in Science and Health (p. 191), "By its own volition, not a blade of grass springs up, not a spray buds within the vale, not a leaf unfolds its fair outlines, not a flower starts from its cloistered cell." We knew that under divine protection neither flood nor drought could affect the growth. We also overcame destruction by insects, through the truth.

For all these blessings we are grateful, but for the spiritual uplift and the knowledge that "God is present everywhere," we are most grateful.—(Mrs.) Edna Patterson McClelland, Centralia, Illinois.

4

Words can only express in a very small measure what Christian Science means to me and mine. There is no material price that can pay for what it has done and is doing each day for each one of us, for not a day goes by that God's allness is not proved in some way. When Christian Science first came to my home my baby was quite ill. She refused to eat and just lay listless without caring to move or to be moved. A neighbor who was a Christian Scientist had been talking to me of Christian Science whenever an opportunity presented itself, but I did not comprehend what she said until she gave me some Christian Science literature to read and I asked some questions about what I read, the answers to which revealed the truth to me. Baby was taking medicine at the time, but when I went home the medicine was thrown away and I endeavored to realize the truth that had been revealed to me. I have never had occasion to regret my step, for baby has doubled in weight and growth in six months' time, yes, even more than double, and is so happy and lively that it is almost impossible to believe she was ever sick.

I have since been healed of internal rupture. I spent only one day in bed and am as strong and even stronger than before. I certainly am grateful, and the only way I can repay for what I have received is by living the truth more and more each day and being willing to help whenever opportunity is mine to do so. I am hoping this may help others as I have been helped by reading the testimonies.

(Mrs.) Myrtle Marden, Fillmore, California.

Signs of the Times

["The English Bible from Bede to Tyndale," by Frederick Dixon— Reprinted by request, from *The Christian Science Monitor*, Boston, U.S.A., Nov. 24, 1909]

England, in a famous sentence, has been termed the country of a book, and, allowing for the perhaps inevitable looseness of an epigram, the phrase is as descriptive as it is picturesque. English prose, with all its melody, its thunder, and its rhythm, found its earliest expression in the English Bible and it found it in the Bible because it found there the inspiration of all that was most enduring and noblest in the national character. "To the Bible," wrote Matthew Arnold, "men will return; and why? Because they cannot do without it; because happiness is our being, end, and aim, and happiness belongs to righteousness, and righteousness is revealed in the Bible." The Bible, as we have it, is not, of course, the work of an individual or a generation. It is rather like an English oak, bursting from its tiny acorn, and adding, century by century, to its girth, its majesty, and its might.

The acorn was the rude Anglo-Saxon verse into which Cædmon wrought the story of the Hebrew and Greek Scriptures, as preserved in the Vulgate of Jerome. For the English Bible, like English history, had its genesis in the songs of the people. Cædmon was a herd employed in the great Abbey which the Lady Hild had built on the edge of the wild moor where the dark cliffs plunge down into the northern sea at Whitby. So deficient was he in sense of song that when the harp was passed to him at the monastic board, he would rise and go out to tend his cattle in the stables. One night, after he had done this, a voice spoke to him as he slept, saying, "Sing, Cædmon, some song to me," and he answered, "I cannot sing; for this cause left I the feast." Then said the voice, "You shall sing to me." Once more Cædmon answered, "What shall I sing?" And the voice said, "The beginning of created things." After that Cædmon did sing. He sang of the creation and all the history of Israel; he sang of the birth of Jesus, and of the resurrection and ascension. What he sang may be read to-day in the West Saxon version which has come down to us. It is not yet the English Bible, but it is the introduction.

What Cædmon did for the Angles of Northumbria, Ealdhelm did for the West Saxons. Ealdhelm was the first bishop of Sherborne in the day when Ine cut the great Wessex diocese of Winchester in two. He is credited with having made the first translation of the Psalter, just as one of his successors in the Sherborne see, Asser, is credited with the invention of the organ. Finding that the people cared little for his sermons, Ealdhelm dressed as a minstrel, took his stand daily on the bridge at Malmesbury, and there sang the gospels to the peasants as they entered the town.

It was not, however, only the peasants who needed this simple theology. The church was filled with sacerdotes idiotæ, as Bede terms them, by which he meant priests who knew no Latin. For these the great scholar had already translated the Lord's Prayer into the vernacular, and he now determined to give them something of greater length. His choice fell on the gospel of John, and so it came about that the Fourth Gospel was the first book in the Bible known to have been translated into English; an incident not without significance in view of the fact that this book has since become the storm center of the canon. Many partial translations were made after this by the Anglo-Saxon church, translations full of promise for the future. Of these the most famous are the interlinear versions of the Old Latin text of

the second century, preserved in what are known as the Lindisfarne gospels, and the eighth century gloss, now in the Bodleian, endorsed with the note, "Let him that makes use of me pray for Owun who glossed this for Farmen priest at Harewood."

Meantime a momentous change was taking place within the church. As early as 664, the Whitby conference had decided the struggle for supremacy between Celtic and Latin Christianity. The Norman conquest completed the victory of the latter. The language of the church became Latin, as the language of the court had become French, and Anglo-Saxon sank to the vernacular of the villages. The Bible, if it may be permitted to put it so, ceased to be the book of the people before it had become so. It became the quarry from which the schoolmen hacked syllogisms, instead of causing to flow the water of life. The change from all this was wrought in the noontide of scholasticism, by the greatest of the schoolmen, Wycliffe himself.

It has been truly said that the schoolmen are as extinct as the dodo, but it must not be forgotten that it was the very subtleties of scholastic philosophy which, in an age of intellectual torpor, raised up the scholars who made Oxford, the second school of the church, the menace of the papacy. Ockham had already raised the standard of revolt, when Wycliffe came upon the scene. In the rapid change of the political kaleidoscope, the scholastic doctor developed into "the first Protestant." The syllogistic Latin was flung aside for the tongue in which Chaucer was soon to speak; and with the assistance of Hereford, the first English Bible was given to the world.

It was somewhere about the year 1382 that the first copies of this book began to filter through the country. It appeared anonymously, for the simple reason that the grip of the Church had already so tightened on popular liberties that an episcopal license was necessary to legalize the translation, and it was certain that none would have been forthcoming. Wycliffe, it is supposed, himself translated the New Testament at Lutterworth, while Hereford completed that of the Old Testament, as far as Baruch, at Oxford. Anyway there is, in the Bodleian, a manuscript which breaks suddenly off in the middle of a verse in Baruch, with a note to the effect that Hereford's translation ends here. It is believed that this was the moment at which the sentence of excommunication fell upon that scholar, but who completed his work is pure surmise. This is the real Wycliffe Bible of which some thirty copies are known still to exist; and it must not be confounded with the revision of 1388, by Purvey, of which some one hundred and forty copies are in existence.

It would be difficult to exaggerate the effect of this book upon the national conscience: as Mr. Hoare has so truly said, "Il n'y a que le premier pas qui coûte." The country was aflame with Lollardy. Copies of the translation sold for thirty pounds, of our money, and it is said that a load of hay was given for a loan of it for an hour. The tide rose rapidly. The Carmelite Stokes fled from Oxford. "You cannot travel anywhere in England," wrote one of the bitterest of Wycliffe's enemies, "but of every two men you meet one will be a Lollard." At last the crown and the church struck in concert. At the price of the extinction of the intellectual life of the university, Lollardy was driven under the surface at Oxford, only to blaze out with irresistible vehemence in the reformation. Wycliffe himself was left untouched. Fighter as he was, Archbishop Courtenay shrank from closing with the terrible schoolman, who flouted "The Council of the Earthquake," held in the famous precincts of Blackfriars. on a spot subsequently occupied by Shakespeare's theater,

and to-day the site of the offices of *The Times*. To the last he never quailed. "I am confident," he said, "that in the end the truth must prevail." He felt, to apply to his book the words of his own translation of Luke, "Thou shalt go bifor the face of the lord: to make redi his weies, to zeue science of helthe to his puple: in to remissioun of hir synnes."

For a century subsequent to the suppression of Lollardy at Oxford, the intellectual life of the country lay in a state of stupor. It was a period of war abroad and civil strife at home. It was the day of Agincourt and La Pucelle, but it was also the day when the roses were picked in the Temple gardens, and the crown was found under a hawthorn bush on Bosworth field. Gradually through the mist of battle came the dawn of the Renaissance. Columbus discovered the new world. Vasca da Gama rounded the Cape of Good Hope, and Magellan passed through the straits which bear his name. The Gutenburg presses were creaking busily at Mentz, and Caxton had hung up his red pole in the almonry at Westminster. Luther had nailed his theses to the cathedral doors at Wittenberg. Grocyn had come to teach Greek at Oxford, while Erasmus had been installed as Lady Margaret lecturer at Cambridge. He remained there long enough to add one more to the world's innumerable warnings on the futility of persecution. The teaching of Wycliffe, he wrote later to Pope Adrian, from Bale, had been only temporarily crushed, it had not been extinguished: that is the only effect force ever has. How true this estimate was the event proved. Two years later Tyndale's New Testament was published.

The story of the Tyndale Bible is one of the most dramatic in the history of the world. It was in 1523 that the poor scholar came to London to endeavor to interest the Catholic hierarchy in his project for translating the Bible. His reputation had preceded him. It was known that he had made his native Gloucestershire too hot to hold him by his bold defiance of a certain pillar of papacy to the effect that, "If God spare my life, ere many years I will cause a boy that driveth the plow shall know more of the Scriptures than thou dost." The see of London was at that moment held by Tunstall, an able scholar, but a fierce opponent of the Lutheran heresy. Tyndale's appeal to him fell on deaf ears. Neither the clownish priest nor his revolutionary opinions were calculated to appeal to the courtly prelate. "I understood," Tyndale wrote later, "that not only was there no room in my Lord of London's palace to translate the New Testament, but also that there was no place to do it in all England."

From London he fled to Hamburg. Possibly he visited Luther at Wittenberg, joining the throng of pilgrims who at the sight of the towers and spires of the town soaring over the Elbe, halted to thank God that from here, as from Jerusalem of old, the light of evangelical truth had spread to the utmost parts of the earth. At any rate, in the spring of 1525 he was at Coln. In the famous presses of Peter Quentel, in that town, the sheets of the first three thousand copies of the New Testament were printed, as far as the gospel of Mark. At this moment there appeared on the scene one Johann Cochlaeus, known as the scourge of Luther. There was nothing for it but to decamp. Bearing his precious burden, as Æneas bore "father Anchises" from the ruins of Troy, Tyndale made for Worms, and here, in the presses of Schöffer, the first octavo edition of three thousand copies was completed. With the opening of the ports in the following February the work of smuggling the edition into England began. Hidden in bales of merchandise of every description the Tyndale testament came pouring into the country. So tireless, however, were the efforts of Wolsey's spies that of the first eighteen thousand copies,—one fragment of this quarto and two incomplete copies of the octavo have alone survived. The fragment contains the translation of the first twenty-two chapters of the gospel of Matthew. Absolutely unique, it consists of eight of the actual sheets printed by Peter Quentel, in 1525, and is one of the treasures of the library of the British Museum.

The profits acquired by Tyndale in this manner were immediately employed in furthering new schemes of translation. With indefatigable energy he had, in the midst of his other labors, taught himself Hebrew, and in 1530 the result was seen in the publication of his version of the Pentateuch. In the following year there appeared his translation of Jonah; and three years later the revised edition of the Pentateuch and New Testament, the latter of which, with its thousands of corrections, has always been regarded as the masterpiece of his genius. It was a copy of this edition, superbly printed and decorated, which he presented to Anne Boleyn. After much wandering, it has at last found a safe resting place in the British Museum, where it may be seen, with the words Anna Angliæ Regina faintly decipherable upon its edges, a memorial of the policy which placed that unhappy queen upon the throne.

This revision was scarcely circulated before Tyndale was immersed in further translations. He was not destined, however, to complete his dream of translating the whole Bible. In 1535 he was enticed out of his house in Antwerp, and carried a prisoner to Vilvorde castle. Here, in the dark and cold of his dungeon, his last work, the translation of the Old Testament, from Joshua to Chronicles inclusive, was accomplished. On October 6, 1536, he was strangled, and burned at the stake. The malice of his enemies had triumphed over what, in his translation of Corinthians, he had termed "oure erthy mancion wherein we now dwell," but it was unable to undo his work. Fifty thousand missionaries, in the shape of copies of his Testament, were already bringing true his prophecy, that the boy who guided the plow should know the Scriptures.

In spite of its limitations, the Tyndale version is the greatest individual achievement in what has been so happily described as the evolution of the English Bible. He was not, it is true, the first to conceive and carry out the idea of a vernacular translation; the honors of the pioneer must always rest with Wycliffe. Nor did he, like Coverdale, complete the translation of the whole canon. Still, after generations of scholars have lavished their genius on the work, the fact remains that, of the books he translated, eighty per cent of his Old Testament and ninety per cent of his New Testament are contained in the English Bible of to-day. The Wycliffe Bible was after all a medieval book, a translation of the Vulgate, and so a translation of a translation into a language which has not yet found its own vigor and mellowness. The translation of Coverdale was again a translation of translations, based, as it was, on the old Latin and German versions. The translation of Tyndale was a translation from original Hebrew and Greek documents into the language in which, in a few years, Shakespeare and Marlowe, Spenser and Jonson were to speak to the world.

One of the medieval ecclesiastics had raged at Wycliffe for turning the jewel of the church into the common sport of the people. Sir Thomas More brought a similar complaint against Tyndale for his abandonment of the old ecclesiastic words, but posterity has not sustained his objection. One of the greatest masters of prose in our own time has summed up the majesty of his translation in the words, "Of the trans-

lation itself, though since that time it has been many times revised and altered, we may say that it is substantially the Bible with which we are familiar. The peculiar genius—if such a word may be permitted—which breathes through it—the mingled tenderness and majesty—the Saxon simplicity—the preternatural grandeur—unequaled, unapproached, in the attempted improvements of modern scholars—all are here, and bear the impress of the mind of one man—William Tyndale."

[From an Editorial in Yucaipa (California) News Reprinted in San Jacinto (California) Register]

The district attorney of Los Angeles County has started a crusade against Christian Science parents who do not call in a licensed medical practitioner for their children when ill. He is a fine man, a capable district attorney, and looks the part, but we very much fear that he is overzealous in the cause of the medicine man. Until the medical fraternity can establish an infallible means of cure; in fact, until some one system of healing can prove to the world that it never fails to effect a cure for the ills of suffering humanity, then the individual should have the inalienable right to choose his own brand of healing.

To any one who has ears to hear testimony and eyes to see the "before and after taking" patient, Christian Science has definitely established its position as a system of healing; and it may also be mentioned in passing, by one who does not subscribe to all the doctrines of that church, Christian Science has also proved, through the living example of its adherents, its power to produce Christian character. The attack on this body of people will not harm the church. No religion has ever been crushed through persecution. It is only when the church becomes rich and powerful that it waxes fat and indolent and loses its hold on the people and its power for good.

A sinister note in the district attorney's attitude is the evidence of renewed activity on the part of the medical trust in the state. Having succeeded in disbarring the chiropractors from practice in the state, and using a few isolated cases of smallpox to start a campaign for wholesale vaccination of school children, they are now apparently attempting to further kill off competition by hampering the Christian Science practitioners. When medical men fail (and how often they do fail!) where will suffering humanity turn except to some form of drugless healing? More and more people each year are turning away from the medicine man with his drugs and his mania for surgery, and embracing some other form of healing, certainly less destructive. The activities of the medical trust will be curbed by the people if the physicians themselves do not use better judgment, and the law-enforcing officers of the state would do better to give their undivided attention to the obvious, rampant crime in their own districts rather than begin a campaign against a group of people so upright as the Christian Scientists.

[From a Synopsis in Le Journal de Genève of the Book "Volonté et Conscience, Essai de Monisme spiritualiste" (Will and Conscience, Essay of Spiritual Monism) by Perceval Frutiger, M.A., which received from the University of Geneva, Switzerland, the Amiel Prize]

Spirit is the only true reality. The true foundation of all things is not matter, it is Spirit. There is nothing in the universe that can be either inert or dead. . . . Spirit is not only the true foundation, it must be said that Spirit is the only foundation of reality. Spiritual teaching must be a monism. This is an essential point. All forms of dualism are inane. What sense is there in the classic dualism of Spirit and matter? It is the dualism of the non-dimensional and dimen-

sional, of the active and inert. Now, matter is not dimension, for dimension is not a quality which can be found objectively in bodies. As with all perceptible qualities, which do not belong to matter itself but are the outcome of our perception of it, and therefore are wholly subjective, so it is with dimension. Neither is matter inert, if by matter one means the things that exist, for all existence is a will to be, which implies energy and activity.

Thus vanishes the phantom of a matter which would be opposed to Spirit. . . . Matter and external necessity are not intrinsic realities; they are not even negative realities. Behind what we term matter and external necessity, there is the same reality that we have recognized as being the substance of all things,—Spirit and liberty.

[From "Old Age," in The Atlantic Monthly]

I have even made a list of evils that I want to attack, which I have never before felt the courage to do. The only one of these here in place is the current idea of old age itself. We have too commonly accepted the antiquated Scriptural allotment of threescore and ten as applicable now. But the man of the future will be ashamed and feel guilty if he cannot plan a decade or two more of activity; and he will not permit himself to fall into a thanatopsis mode of mind, or retire to his memories, or to the chimney corner. . . . It is ours to complete the drama and add a new and higher story to the life of man; for as yet we do not know what full maturity really is, and its last, culminating chapter is yet to be written.

["Doctors and Alcohol"-From The Pioneer]

The ballot of members of the Queensland (Australia) branch of the British Medical Association on the liquor referendum questions submitted to the people resulted as follows:

For	Prohibition	104
For	Continuance	32
For	State Control	22
he me	dical men of Victoria (Australia) expr	essed

The medical men of Victoria (Australia) expressed their opinion as follows:

For	Proh	ibi	tion.			٠					•		×		•	203
For	Cont	ini	ance		٠			•			•					44
	lined															

[Foster Watson, D.Lit., in The Hibbert Journal]

The great hope of the future of education, on the social side, is not the development of men and women who will merely set out to make a better social order than the past, but the development of individuals who will themselves be that order.

[From an Address by Alfred Noyes, as Quoted in Public Opinion, London, England]

Our intellectuals, of that particular kind that I have been describing, have stultified their own science by implying that the greater can be produced from the less. Again and again you will find that implication behind their work. They have whittled away the whole universe by explaining every stage of it as a product of something lower. Man from the ape, the ape from the fish, the fish from the protoplasm, and, finally, the solemn discussion as to whether the gulf between the protoplasm and nothing at all may not one day be bridged by that very science which depends upon the axiom that the greater cannot be produced by the less. . . .

How many of our writers to-day understand the passions, but absolutely fail to understand the affections! How sel-

dom to-day are love, honor, truth, associated with the great words "for ever." How many acute minds have tried recently to prove that all these things are scraps of paper to the progressive individual? Yet it remains true that if you take away the vital secret, take it away forever from humanity, deny an ultimate goal to our struggles, there is nothing left to us that has the slightest meaning. It is no use talking about progress, if it is all going to fizzle out with the life of the race on this planet.

[Sydney Olivier, K.C.M.G., C.B., in The Contemporary Review]

Are the delegates "visionaries" when they appeal to the strength of those forces whose names proceed out of the mouth of God? Or do they perceive a fact?

What was noticeable in the Assembly of the League was the strong conviction of the majority of the delegates of the power of these highest human qualities, of the validity of appeal to the behests of the spiritual life to solve problems of the animal life which the primitive methods of animal life never solved in simpler ages, and the attempt to solve which by those primitive methods, in our more complex and more terribly weaponed world, can only threaten it with progressive destruction.

[From an Editorial in The San Francisco (California) Journal of Commerce]

It is worth while to emphasize the opinion that prohibition was not made possible by an appeal to the "holier than thou" spirit which often lurks behind the long face. It took far more than that to put it over. . . . It took countless centuries to evolve that it is morally justifiable to prohibit the individual from indulging in practices which are injurious to himself and to society. Especially slow was this reform to overcome the handicaps of appetite and confirmed habit. The same ideas which lie back of the laws against suicide and indulgence in poisonous drugs have been the real support of the movement against the liquor traffic. Had not the evidences of the direct harmfulness of overindulgence in liquor been so great and convincing, prohibition would not have been able to win on the plea of theoretical virtue alone.

There is very small danger of the erection of a legal religious Sabbath enforced by "Blue Laws." One reason is because no one can show that such an institution would be a social benefit or its opposite, a social injury. The dogmatically religious argument becomes weaker as modernized thought advances. No branch of speculative philosophy has undergone a greater revolution in the past fifty years than has religion. Dominant thought in the intellectual world has moved forward and occupied entirely new ground in the whole field of religion. Religion has not grown weaker. It has burst its bonds and has grown stronger and wiser, and is equipped with a deeper understanding. The old fetishes have lost their charm, and new allegiances have been created to broader and sounder ideals. Decreasingly fewer people now govern their actions by fiat as to what constitutes the word of God. It is not that there is less respect for men's ideal of the word of God, but there is a new conception of what that term means. This is based upon an acceptance of Truth, which is arrived at only by experience. That which is not true is not converted into truth by being falsely labeled with a fancied religious authority. Therefore, we are in no real danger of religious "Blue Laws." But that does not mean the destruction of the highest and soundest ideal behind the day of rest. . .

The soundest safeguard against the rest day being "desecrated" by scandalous follies, questionable sports, and amusements of an improper character, is to elevate the public taste above such diversions, so that they will not be indulged in, either on Sunday or any other day. That Sunday is a "holy day" is an idea which was created in days when blood atonement, slavery, and polygamy had the same religious sanction. It has lasted a little longer in social evolution, but its sands have nearly run. All days are "holy," as much as any day can be, and no action which is unfit for Sunday is fit for any day. But it is a valued convenience to group the elevating spiritual ministrations upon an agreed day, and it is a highly necessary industrial requirement to have a day of rest from toil. This consideration will save Sunday from destruction.

[Distinguished Physicians Admit that Religion Is the Remedy for Fear]

The New York Globe is quoted as follows: "Speaking with a conviction born of long experience, a New York medical writer extols religion as one of the best of all cures for the morbid fears so common among the nervous. . . .

"'If a man or a woman,' he said, 'is convinced that there is a Providence that oversees human life as well as the universe, in whom "we live, and move, and have our being," and of whose infinite knowledge and power we can have no doubt, the unreasonableness of dreads comes home to him.' And recalling the fact that many other veteran physicians see in religious faith a wonderful remedy for dreads, he quotes a distinguished English physician, as writing to an anxiety-beset friend: 'In my experience the only solution of all our difficulties is to maintain a humble, childlike faith and a confident trust in the perfect love of God.'"

[The End of All Disease Predicted]

At a recent meeting in Boston, Massachusetts, as reported in *The Sunday Herald*, Dr. Lee Frankel, vice-president of the Metropolitan Life Insurance Company, said that in the not far distant future so-called incurable disease would disappear and that it would become normal for people to live a hundred years.

Church Notices

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to Charles E. Jarvis, Clerk, 236 Huntington Avenue, Boston 17, Massachusetts.

From the Church Treasurer

PER CAPITA TAX.—The annual per capita tax for which the Manual provides is due from members of The Mother Church June 1, but may be paid at any time during the year. The per capita tax of those who unite with the church in November is reckoned from the preceding June, for that is the beginning of the church year. If a remittance for church dues exceeds the amount required to balance one's account, the surplus will be credited for the current year, unless otherwise directed by the sender.

Please remit by postal or express money order, bank

draft, or check. Do not send paper money through the mail unless registered.

Please advise promptly of any change in name or address. Per capita taxes and contributions to the Real Estate Fund and to The Christian Science Benevolent Association Fund should be sent to Edward L. Ripley, Treasurer, 236 Huntington Avenue, Boston 17, Massachusetts.

Admission to Membership in The Mother Church

The next admission of candidates will take place on June 3, 1921, as provided in Article XIII, Section 2, of the By-laws of The Mother Church. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Friday, May 20, 1921. Consideration of any applications received after that date will be deferred until the November 4, 1921, admission.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to November 5, 1920, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

Charles E. Jarvis, Clerk,

236 Huntington Avenue, Back Bay, Boston 17, Mass.

Announcements

From The Christian Science Publishing Society

Notice

Several hundred copies of the proceedings in the Supreme Judicial Court of Massachusetts, in the case between the Board of Trustees of The Christian Science Publishing Society and the Board of Directors of The Mother Church, as published in *The Christian Science Monitor*, were run off at the time of their publication in the *Monitor*.

These extra copies will be bound in simple and substantial book form, of about 1200 pages, with board covers, size 81/4" x 103/4". The book will contain the verbatim report of the hearings on the Bill in Equity, as transcribed from the notes of the official stenographer, including the arguments of counsel before the Special Master and the final arguments before the Full Bench of the Supreme Judicial Court of Massachusetts. It will also include the decision of the court when given. It will include, as well, the Master's Report, the hearing on extension of time for exceptions, the arguments on exceptions to the Master's Report, the hearing on Motion to Intervene, the Attorney General's arguments on Motion to Intervene, and the official report of the hearings in the Contempt Citation Proceedings. The book will also contain the principal pleadings, including the pleadings in the case of Dittemore vs. Dickey et als., and the Plan of Properties and List of Deeds. The testimony and the exhibits which appear as part of the testimony will be indexed.

These copies will be sold at one hundred dollars each, and the orders will be entered for future delivery in the order of their receipt accompanied by remittance for this amount.

Orders for Pacific Coast and Rocky Mountain States

In order to facilitate the filling of orders for the Pacific Coast states and to expedite delivery, orders and remittances from reading rooms and individuals in the five postal zones east of San Francisco, with the exception of orders and sub-

scriptions for *The Christian Science Monitor*, *Journal*, *Sentinel*, *Quarterly*, and *Heralds*, should now be sent direct to The Christian Science Publishing Society, Pacific Coast Depot, 255 Geary Street, San Francisco, California.

The Pacific Coast Depot will continue to handle subscriptions and supply periodicals only to San Francisco and immediate vicinity.

The first five zones east of San Francisco include all of California, Oregon, Nevada, Washington, Idaho, Utah, Arizona, and approximately all points west of Billings, Montana; Cheyenne, Wyoming; Denver, Colorado; and Las Vegas. New Mexico, including these cities. The local post offices in the last four states mentioned will supply further information regarding the fifth zone limit.

The above notice does not apply to Canadian territory.

European Orders for Bibles

The arrangement of the Publishing Society, whereby the Christian Science reading rooms in Great Britain and Continental Europe have been accustomed to order Bibles directly from the Oxford University Press, London, sending payment for these orders to The Christian Science Publishing Society in Boston, has been discontinued, and these reading rooms are now requested to send their orders accompanied by remittance to the London office of The Christian Science Publishing Society.

The Oxford University Press will henceforth fill for the Publishing Society only those orders received through our London office. Address all such orders for Bibles to The Christian Science Publishing Society, Amberley House, Norfolk Street, London, England.

New Pamphlets

Advance information will in future be given two weeks before each new pamphlet is placed on sale. This will replace the former system of standing orders.

New Pamphlet in Russian

There is now on sale a new Russian translation of "Christian Science: Its Advantage to Mankind" by Edward A. Kimball, with alternate pages in English. Price 5 cents a copy. Reading room discount 20 per cent.

"Rudimental Divine Science" for the Blind In English Braille

Orders for the above-named book from reading rooms in Great Britain should now be sent direct to The Christian Science Publishing Society, Boston 17, U.S.A.

Orders for, and correspondence relating to, the publications announced herein should be addressed to The Christian Science Publishing Society, Boston 17, U. S. A.

Articles and Testimonies

Available articles from Christian Scientists and good testimonies from those healed by Christian Science are always welcomed for consideration by the Editors. Manuscripts for publication in the Sentinel and Journal, whether articles, poems, or testimonies, and correspondence relating thereto, should not be addressed to individuals, but to the EDITORIAL DEPARTMENT, THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, Boston 17, U.S.A.

Letters of Appreciation

Many letters of appreciation of THE CHRISTIAN SCIENCE MONITOR and other Christian Science activities are constantly being received. These letters express what these activities mean to different individuals in various occupations and pursuits. The favorable comment that has been received on those already published indicates that they are welcome and helpful; therefore others will be published under the above heading. Extracts from such letters follow:

Beneficent Influence

MAY I not especially express my grateful appreciation for THE CHRISTIAN SCIENCE MONITOR? Its beneficent influence cannot fail to be felt around the world. Unharnessed of all political and religious domination and knowing that "right is radical," it does not soil its "garments with conservatism" (Science and Health, p. 452), but rebukes "pointedly and unflinchingly" (Science and Health, p. 53) iniquity of every variety. Each day I look forward to reading the Monitor, Constructive for it always contains a wealth of instructive and constructive **Information** information concerning all matters of importance in the world to-day. I was not surprised in the least to find that the MONITOR is listed in the weekly paper, Editor & Publisher, as one of the twelve best edited newspapers in the United States.

I feel impelled to express my gratitude for The Christian Science Monitor as well as for the other periodicals. I live many miles from a shopping center and was somewhat in doubt as to how I was going to make my holiday purchases, when I remembered the advertising columns of the Monitor. I resorted thereto and I want to say that I never made presents Advertising that gave so much pleasure. Letters were received from all my friends and each and every article was said to be high class, and different from such articles as they generally secured. It may also interest you to know that the leading merchant in one of our small towns near here remarked the other day, as I handed him two copies of the Monitor, that he was going to discontinue all other papers and magazines and take only the MONITOR, as it contained all that was worth while in all the others.

WORKS ON CHRISTIAN SCIENCE

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Textbook

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only textbook on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each \$3.00; twelve or more, each \$2.75. Ooze leather, vest pocket size, single copy \$3.00; twelve or more, each \$2.75. Morocco, vest pocket size, single copy \$3.50; twelve or more, each \$3.25. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy \$4.00; twelve or more, each \$3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$5.00; twelve or more, each \$4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy \$6.00; twelve or more, each \$5.75. Large Type Edition, designed especially for the use of First Readers. Large Type (18-point) on Warren's heavy India Bible paper, bound in leather. Size 8 by 103 finches. Single copy \$7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

French Translation. Alternate pages of English and French. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, \$5.50; six or more, each \$5.25. Orders for the French translation in lots of six or more may include both bindings.

German Translation. Alternate pages of English and German. Cloth, one to five copies inclusive, each \$3.50; six or more, each \$3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each \$5.50; six or more, each \$5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include English, French, and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy \$2.25; twelve or more, each, \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy \$4.00; twelve or more, each \$3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy \$5.00; twelve or more, each \$4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 366 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy \$2.25; six or more, each \$2.00. Morocco, limp, round corners, gilt edges, Oxford India Bibbe paper, convenient for pocket, single copy \$4.00; six or more, each \$3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy \$5.00; six or more, each \$4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy \$6.00; six or more, each \$5.50.

Christ and Christmas. An illustrated poem. Cloth, single copy \$3.00; six or more, each \$2.50. Published also in morocco, limp, round corners, gilt edges, uniform in style with the pocket edition of Science and Health. Single copy \$3.00; six or more, each \$2.75.
